APPLICATIONS

HOUSING ELEMENT PROJECT CHECKLIST FORM
Project Within the Scope of The Housing Element Program EIR

OVERVIEW

On November 24, 2021, the City Council certified the Citywide Housing Element 2021-2029 and Safety Element Updates Final Environmental Impact Report (EIR), SCH No. 2021010130, EIR No. ENV-2020-6762-EIR (Program EIR), to adopt the 2021-2029 Citywide Housing Element and the Updates to the Safety Element and the Plan for a Healthy LA (Health Element). Pursuant to CEQA Guidelines Sections 15168(c)(4) and 15168(d), the following Proposed Housing Project has been found to be within the scope of the program analyzed in the Program EIR and its environmental effects are within the scope of environmental impacts assessed in the Program EIR, and Addendum No. ENV-2020-6762-ADD1 and ENV-2020-6762-ADD2.

For additional information regarding this form, see the Housing Element Project Checklist Form Instructions (CP-4091) at the Department of City Planning Forms Page.

PROPOSED HOUSING PROJECT

Name and Address of Proposed Project, or APN #s if no address:

The ROW DTLA Residential Project 747–787 South Alameda Street, 1312–1396 East 7th Street, 136-196 South Central Avenue, 1301–1327 East 8th Street, 700–760 South Market Court, 720–746 South Terminal Street, and 747 and 760 South Warehouse St. Los Angeles, CA 90021

Brief Description of Proposed Project:

The Project proposes a mixed-use development within three (3) buildings containing 1,000 residential units including 114 affordable units (11 percent Very Low Income units [VLI])) and 6,547 square feet of commercial (retail/restaurant) within the Development Area of the Project Site. Building A would include 1,119 square feet of commercial uses located on the first floor; 410 residential units at first though eighth floor; and two (2) levels of subterranean parking as well as above grade parking located on the first floor. Building B would include 214 residential units located on the first through eighth floor, and two (2) levels of subterranean parking as well as above grade parking located on the first floor. Building C would include 5,428 square feet of commercial uses on the first floor; 376 residential units at the first through eighth floor; and two (2) levels of subterranean parking as well as above grade parking located on the first floor. The proposed buildings would range from approximately 100 feet to 103 feet in height. Upon completion, 884,278 square feet of new floor area would be provided within the Development Area with a total of approximately 2,477,695 square feet of floor area provided within the Project Site. The Project would include 1,092 vehicular parking spaces. The Project would also include a total of 96,278 square feet of open space within the Development Area of which 90,378 square feet would be common open space, and 5,900 square feet would be private open space. The existing uses within the remainder of the Project Site outside of the Development Area would remain and would not be modified by the Project. The Project will also comply with all applicable Environmental Protection Measures (EPMs) and guidelines set forth in Chapter 1A of the Zoning Code.

☑ Please check this box if you have provided an attachment with additional project description information to this form.

DETERMINATIONS

Based upon the attached, "Project Within the Scope of the Housing Element Program EIR Checklist and Analysis," the whole of the administrative record on the Proposed Housing Project, and a review and consideration of the Program EIR, the decisionmaker finds all the following statements to be true:

1. This Proposed Housing Project is within the scope of the previously approved program for which the Program EIR was certified.
2. This Proposed Housing Project will have no significant environmental effects not examined in the Program EIR.
3. The Program EIR adequately described the Proposed Housing Project for the purposes of California Environmental Quality Act (CEQA).
4. Pursuant to CEQA Guidelines Section 15162, no substantial changes to the project analyzed in the Program EIR are proposed as part of this Proposed Housing Project. Further, no substantial changes have occurred with respect to the circumstances under which the Program EIR was certified, and no new information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time that the Program EIR was certified as complete, has become available.
5. All applicable mitigation measures, identified in the Program EIR Mitigation Monitoring Program (Program MMP), have been satisfied or incorporated into the Proposed Housing Project or will be made into enforceable obligations on the Proposed Housing Project. A mitigation and monitoring program for the proposed housing project (Project MMP) has been prepared for adoption.

NOTES

As demonstrated by the responses to the questions herein and the technical reports included in Appendix D, the Project is within the scope of the Housing Element Program EIR that was certified and the Project would not result in significant impact environmental effects not examined in the Program EIR.

PROJECT WITHIN THE SCOPE OF THE HOUSING ELEMENT PROGRAM EIR - CHECKLIST AND ANALYSIS

The following checklist and analysis shall be used to determine if the Proposed Housing Project, described below, is within the scope of the Citywide Housing Element 2021-2029 and Safety Element Updates Final EIR, SCH No. 2021010130, EIR No. ENV-2020-6762 (Program EIR), certified by the City Council.

A. PROPOSED HOUSING PROJECT CONTEXT

A.1 Project Location Details:

The Project Site consists of three (3) irregularly shaped parcels that collectively measure approximately 30.65 acres and is located within the Downtown Community Plan area of the City. The Project Site is located at 747–787 South Alameda Street, 1312–1396 East 7th Street, 136-196 South Central Avenue, 1301–1327 East 8th Street, 700–760 South Market Court, 720–746 South Terminal Street, and 747 and 760 South Warehouse St. Los Angeles, CA 90021.

A.2 Surrounding Area and Uses:

The area surrounding the Project Site is primarily developed with warehouses, cold storage facilities, small-scale manufacturing operations, other industrial uses commercial office uses, commercial retail uses, and residential uses have been developed in the vicinity of the Project Site.

A.3 Project Contact/Owner Information:

Jeffrey Goldberger, Principal
ALAMEDA SQUARE OWNER LLC
40 W 57th Street, 29th Fl
New York, NY 10019

A.4 Document Prepared by:

Eyestone Environmental, LLC, 101 Continental Blvd, Suite 240, El Segundo, CA 90245

☑ Check here if additional pages for Section A are attached.

B. PROGRAM EIR BACKGROUND

B.1 CEQA Guidelines Section 15168

The California Environmental Quality Act (CEQA) provides for limited environmental review of subsequent projects under a Program EIR. (CEQA Guidelines Section 15168.) Later activities under a continuing program analyzed in the Program EIR must be examined to determine whether any additional environmental analysis must be conducted. (Guidelines Section 15168(c)(1).) If a lead agency finds that pursuant to Guidelines Section 15162, no subsequent EIR would be required, the lead agency can approve the activity as being within the scope of the project covered by the Program EIR, and no new environmental document would be required. (Guidelines Section 15168(c)(2).) Whether a later activity is within the scope of a Program EIR is a factual question that the lead agency determines based upon substantial evidence in the record. (Guidelines Section 15168(c)(2).) The lead agency shall incorporate feasible mitigation measures from the Program EIR Mitigation and Monitoring Program (MMP) into later activities in the program. (Guidelines Section 15168(c)(3).) Where the later activities involve site specific operations, the lead agency should use a written checklist to determine whether the environmental effects of the site-specific operations are within the scope of the Program EIR. (Guidelines Section 15168(c)(4).)

B.2 Program EIR

In certifying the Program EIR and approving the project, the City Council adopted the following findings related to the scope of the project analyzed in the Program EIR and the types of impacts analyzed:

> *The EIR analyzed the build out of the Regional Housing Needs Assessment (RHNA), that is the build out of 420,327 housing units in eight years (456,643 RHNA minus 36,316 housing units that have received approvals but have not yet been built and/or received the certificate of occupancy [pipeline projects]). The EIR analyzed the program-level impacts from the full build out of the RHNA, as well as the project-level impacts that occur from the development of the types of housing projects that will be developed from build out of the RHNA. The following types of housing projects were analyzed and within the scope of this EIR:*
>
> - *Multi-family residential, ranging from small apartment buildings with two to 10 units, medium apartment buildings with between 11-49 units, large apartment buildings with between 50-200 units, or larger apartment buildings and high-rise structures with more than 200 units.*
> - *Single-family residential, ranging in size and scale from smaller single-family homes to larger single-family homes, small-lot subdivisions and new single subdivisions.*
> - *Accessory dwelling units (ADUs), including attached ADUs, detached ADUs, Junior ADUs, ADUs converted from existing floor area, multiple ADUs on lots with existing multi-family dwellings, and Movable Tiny Homes.*
> - *The mixed-use development ranges in size and scale from neighborhood commercial mixed-use with smaller nonresidential uses, to high-rise mixed-use with larger nonresidential uses.*

- *Conversion and/or rehabilitation of existing nonresidential, residential, or mixed-use structures to be used for housing.*

Housing types for different income levels were analyzed, including single-resident occupancy and affordable housing that may be for families, seniors, residents with special needs or permanent supportive housing. The EIR also analyzed the impacts from various locations, geographies, and environments where build out of the RHNA could occur, including the following:

- *Sites currently zoned for residential uses, including multi-family and single-family uses;*
- *Sites currently zoned for commercial uses, which permit residential uses;*
- *Sites currently zoned for hybrid industrial uses, which permit joint live-work residential uses;*
- *Non-vacant sites, and sites with existing housing;*
- *Sites located near public transit;*
- *Sites located in a Historic Preservation Overlay Zone (HPOZ)*
- *Sites located in areas with special environmental considerations, such as areas located by Open Space, Hillside Areas, Very High Fire Hazard Severity Zones (VHFHSZ) or Coastal Zones.*

To analyze project-level impacts on the environment from the variety of housing types and locations that could potentially be built to accommodate the RHNA citywide, the City established a team of experienced project planners who have experience in reviewing environmental documents and analyzing or consulting on environmental impacts for housing projects, as well as other development types, across the entire City geography, including project planners who work in the Major Projects Section, who are responsible for reviewing and preparing all EIRs citywide for the Planning Department; planners who work in the Citywide Environmental Policy Unit who are responsible for advising on all CEQA impact issues, training and advising planners on preparing CEQA clearances; as well as project planners who review and prepare exemptions, negative declarations, mitigated negative declarations, and sustainable communities environmental assessments (SCEAs) within specific geographies in the City. After assembling this consulting team, the City surveyed the thousands of environmental assessments that have been prepared in the last five years for housing development of the type that will build out the RHNA and selected 54 case studies to discuss in the EIR which identify both the typical- and worst-case environmental impacts from housing development. In the survey of environmental assessments, it was determined that the City reviews hundreds of discretionary housing projects every year for CEQA compliance, that the largest majority of housing projects do not require mitigation, as many housing development projects are found to be exempt from CEQA (specifically, hundreds of categorical exemptions are used for small to medium scale housing projects, including Class 32 for infill projects up to 75 units or less); and less than 10 percent of discretionary housing projects require an EIR due to significant and unavoidable impacts. Based on this, the case studies are more heavily weighted toward larger-scale projects or those in sensitive environments that are more likely to have significant impacts. Smaller projects in more urban infill areas typically do not require an EIR, a mitigated negative declaration, or SCEA, unless there are specific site conditions, such as historical resources, site contamination, or archaeological resources, that

raise potential environmental impact concerns. The case studies, which include EIRs, mitigated negative declarations, and SCEAs, were selected based on the type of project (e.g., multi-family residential, single-family residential, ADUs, mixed-use development, and conversion and/or rehabilitation), scale of project (single-family to large tower/mixed use), locations with the broadest range of geographies and environmental conditions, and levels of development and density (hillsides, urban, regional centers, coastal, and suburban areas), as well as projects that include income-restricted projects. The intent was to be conservative and identify all of the reasonably foreseeable ways housing can result in environmental impacts in the City, as well as identify the best mitigation measures developed to address those impacts. The City finds the case studies reviewed in the EIR and their identified level of impacts (i.e., no impacts, less than significant impacts, less than significant impacts with mitigation, and significant and unavoidable impacts) are representative of the typical- and worst-case environmental impacts of housing development to be built to accommodate the RHNA. Also, the City finds that it is not reasonably foreseeable that housing development that will build out the RHNA will have significant impacts in those impact categories that were scoped out in the Initial Study (Appendix A to the FEIR). Additionally, the City finds the mitigation measures, developed in the EIR and included in the MMP, to be used by projects within the scope of the EIR, are comprehensive and based on the screening criteria included in those mitigation measures, further studies, and performance standards will, in a majority of circumstances, reduce environmental impacts from housing development to less than significant. However, based on the findings below and the EIR analysis, even with the application of the mitigation measures in the MMP, significant impacts identified in the Program EIR Findings can still occur from housing development of all types throughout the City. The City Council finds the EIR has analyzed and identified the significant impacts that are reasonably foreseeable from housing development in the City for the types of housing projects (described above) that will accommodate the RHNA. (Appendix A: Citywide Housing Element 2021-2029 and Safety Element Updates Final EIR, CEQA Findings of Facts and Statement of Overriding Considerations.)

Additional information regarding the analysis of the impacts from housing projects or the Housing Element Program and build-out of the RHNA is provided in Environmental Analysis, Section 4.0, of the Draft EIR.

B.3 Environmental Impacts Analyzed in the Program EIR

The environmental impacts analyzed and the impact conclusions identified for Projects within the Scope of the Program EIR are shown in Appendix A, CEQA Findings of Facts and Statement of Overriding Consideration for the 2021-2029 Citywide Housing Element and Safety Element Updates, and in the Program EIR, which may be found at https://planning.lacity.org/development-services/eir.

B.4 Program EIR Mitigation Measures

The City Council adopted the Program MMP for the 2021-2029 Housing Element, (Program MMP). The Program MMP provides that, subject to City authority, the applicable mitigation measures in the Program MMP shall be imposed as conditions of approval for a project analyzed as a subsequent approval pursuant to CEQA Guidelines Section 15168.

C. FINDING THAT THE PROPOSED HOUSING PROJECT IS A PROJECT WITHIN THE SCOPE OF THE PROGRAM FOR WHICH THE PROGRAM EIR WAS CERTIFIED

Check all of the boxes in Table C-1 that describe the Proposed Housing Project:

Table C-1

☑	**Multi-family residential development** – Range from small apartment buildings with two to 10 units, medium apartment buildings with between 11-49 units, large apartment buildings with between 50-200 units, or larger apartment buildings and high-rise structures with more than 200 units
☐	**Single-family residential development** – Range in size and scale from smaller single-family homes to larger single-family homes, small lot subdivisions, and new single-family subdivisions
☐	**Accessory dwelling unit (ADU)** - Include attached ADUs, detached ADUs, Junior ADUs, ADUs converted from existing floor area, multiple ADUs on lots with existing multi-family dwellings, and Movable Tiny Houses
☑	**Mixed-use development** - Range in size and scale from neighborhood commercial mixed use with smaller nonresidential uses, to high-rise mixed-use with larger nonresidential uses
☐	**Conversion and/or rehabilitation** – Existing nonresidential, residential and mixed-use structures to be converted/rehabilitated for housing
☑	**Housing type for different income levels**, including single-resident occupancy and affordable housing that may be for families, seniors, residents with special needs or permanent supportive housing

SECTION C CONCLUSION

Check one of the following:

☑ **AT LEAST ONE BOX IN TABLE C-1 IS CHECKED**

The Proposed Housing Project is within the scope of the program that was analyzed in the Program EIR. Go to Section D and E to determine if the site-specific environmental effects of the Proposed Housing Development are within the scope of the Program EIR.

☐ **NONE OF THE BOXES IN TABLE C-1 ARE CHECKED**

The Proposed Housing Project is not within the scope of the program that was analyzed in the Program EIR. A separate environmental analysis is required.

D. MITIGATION MEASURES FOR THE PROPOSED HOUSING PROJECT

The mitigation measures (MMs) listed in the Mitigation Measure Tables, in Section D.1 below, list each of the MMs in the Program MMP. To complete this Section D, each MM in the Mitigation Measure Tables shall be reviewed to determine if the threshold for the measure is met or triggered for the Proposed Housing Project.

The following steps shall be followed to complete Section D:

In the Mitigation Measure Tables in Section D.1, for each referenced mitigation measures "MM", check "Yes" or "No" by following these instructions:

- For any MM for which the project does not meet the threshold of applicability (that is, it is not triggered), mark "No" and provide a brief explanation citing to the evidence as to why it is not triggered by the project. To determine the threshold trigger you may look at the Housing Element Checklist Instruction [Form CP-4091] or the mitigation measures itself in the Program MMP.
- If a MM meets the threshold for applicability and is triggered by the project but will not be implemented either because there is a substituted measure or it cannot be implemented for some reason, mark the MM as "Yes." If a substituted mitigation measure is proposed, in Section D.2 check the applicable box that a substitute measure will be used and check the box that Appendix "A" will be filled out and provide the required analysis in Appendix A. If a mitigation measure will not be implemented with no substitute measure, mark the third box in the Conclusion to Section D and check "Yes" in the screening criteria for E.1.b and prepare the necessary analysis in Section E.2.
- If a MM meets the threshold for applicability for the project and it requires a study or assessment to be performed, mark "Yes" and perform the study or assessment to implement the MM as required in Section E.1.a. The study or assessment may find that the Project will not have an impact. In that case, no mitigation measures will be put in the Proposed Housing Project MMP in Appendix "B", but the box in Section D.1 should still be marked "Yes" because the threshold was met for the Project. See the Instructions document for more details.
- If a MM is marked as "Yes" and does not require a study or assessment, add the MM to the Proposed Housing Project MMP in Appendix "B" and no further explanation is needed.

D.1. Mitigation Measure Tables

Mitigation Measure		Proposed Housing Project Meets Threshold in MM in Program EIR MMP
Air Quality		
4.2-2(a)	Construction Emissions Reduction	☑ Yes ☐ No
4.2-2(b)	Operations Emissions Reduction	☑ Yes ☐ No
4.2-3	Construction TAC Reduction Measures	☐ Yes ☑ No
Brief explanation: In accordance with Mitigation Measures 4.2-2(a) and (b), an evaluation of construction and operational emissions associated with the Project is included as Appendix D.1. With regard to TAC emissions during construction, as the Project would use EPA Tier 4 emissions compliant equipment for all equipment rated 50 horsepower or greater, Mitigation Measure 4.2-3 regarding analysis of TAC emissions is not applicable to the Project. No significant impacts associated with TAC emissions would occur and no mitigation measures are required. In addition, use of Tier 4 emissions equipment has been included as a Condition of Approval for the Project.		
Biological Resources		
4.3-1(a)	Biological Resources Reconnaissance Survey and Reporting	☐ Yes ☑ No
4.3-1(b)	Sensitive Species/Habitat Avoidance: Pre-Construction Bird Nest Surveys, Avoidance, and Notification	☐ Yes ☑ No
4.3-1(c)	Focused Surveys for Rare Plants	☐ Yes ☑ No
4.3-1(d)	Adaptive Management Plan	☐ Yes ☑ No
4.3-2(a)	Habitat Mitigation and Monitoring Plan	☐ Yes ☑ No
4.3-2(b)	Protected Tree and Tree Canopy Survey	☑ Yes ☐ No

Mitigation Measure		Proposed Housing Project Meets Threshold in MM in Program EIR MMP
Brief explanation: The proposed Development Area within the Project Site is currently developed with surface parking and ornamental landscaping and thus does not include natural or undeveloped land. In addition, the Development Area does not have the potential to support special-status species or contain sensitive habitat and the Development Area is not within 300 feet of suitable habitat to support special-status species. Thus, Mitigation Measures 4.3-1(a) through 4.3-1(d) and Mitigation Measure 4.3-2(a) related to surveys, reporting, adaptive management plans and habitat mitigation and monitoring plans are not applicable to the Project. In accordance with Mitigation Measure 4.3-2(b), a protected tree survey was prepared for the Project and is included in Appendix D.2.		
Cultural Resources		
4.4-1(a)	Identification of Built-Environment Historical Resources	☑ Yes ☐ No
4.4-1(b)	Rehabilitation of Historical Resources	☐ Yes ☑ No
4.4-1(c)	Design Requirements for New Construction	☐ Yes ☑ No
4.4-1(d)	Relocation and Rehabilitation of Historical Resources	☐ Yes ☑ No
4.4-1(e)	Historic American Building Survey Documentation	☐ Yes ☑ No
4.4-1(f)	Interpretive Program	☐ Yes ☑ No
4.4-1(g)	Construction Monitoring, Salvage, and Reuse	☐ Yes ☑ No
4.4-1(h)	Temporary Protective Relocation	☐ Yes ☑ No
4.4-1(i)	Excavation and Shoring Plan	☐ Yes ☑ No
4.4-1(j)	Structural Construction Monitoring	☐ Yes ☑ No
4.4-2	Archaeological Resources	☑ Yes ☐ No

Mitigation Measure		Proposed Housing Project Meets Threshold in MM in Program EIR MMP
Brief explanation: A historical resources assessment was prepared in accordance with Mitigation Measure 4.4-1(a) and is included in Appendix D.3. As discussed therein, the Project would not demolish, destroy, relocate, or alter any of the contributing buildings in the Los Angeles Union Wholesale Terminal (District), and the District and its contributing buildings would retain all of their character-defining features and would continue to have sufficient integrity to convey their significance following completion of the Project. The assessment also found that the Project would not materially impair the significance of any of the historical resources in the vicinity of the Project Site. In addition, as evaluated in Appendix D.4, construction of the Project would not result in vibration impacts to on- or off-site historical resources. Therefore, the Project would not have a significant impact on any historical resources on or in the vicinity of the Project Site. As no historical resources would be directly or indirectly impacted by the Project, Mitigation Measures 4.4-1(b) through 4.4-1(j), which include measures to project historical resources including rehabilitation, design, survey documentation, interpretive programs, construction monitoring, salvage, reuse, relocation, and shoring, are not applicable to the Project. In accordance with Mitigation Measure 4.4-2, a cultural resources assessment was prepared and is included in Appendix D.5 along with a substitute measure for a portion of Mitigation Measure 4.4-2.		☐ ☐
Geology and Soils		
4.5-1(a)	Paleontological Procedures for Discretionary Projects	☑ Yes ☐ No
4.5-1(b)	Worker Environmental Awareness Program, Fossil Salvage, and Construction Monitoring	☑ Yes ☐ No
4.5-1(c)	Construction Monitoring	☑ Yes ☐ No
4.5-1(d)	Fossil Discovery, Salvage, and Treatment	☑ Yes ☐ No
Brief explanation: In accordance with Mitigation Measure 4.5-1(a), a paleontological resources assessment has been prepared and is included as Appendix D.6 and Mitigation Measures 4.5-1(b) through 4-5-1(d) will also be implemented as part of the Project.		

Mitigation Measure		Proposed Housing Project Meets Threshold in MM in Program EIR MMP
Hazards and Hazardous Materials		
4.7-2(a)	Environmental Site Assessment	☑ Yes ☐ No
4.7-2(b)	Site Remediation and Health and Safety Plan	☑ Yes ☐ No
Brief explanation: In accordance with Mitigation Measure 4.7-2(a), Phase I and Phase II Site Assessments were prepared for the Project and are attached as Appendix D.7. In accordance with Mitigation Measure 4.7-2(b), a Health & Safety Plan (HASP) is also included in Appendix D.7.		
Hydrology and Water Quality		
4.8-1	Drainage Pattern Alterations and Flood Control	☐ Yes ☑ No
Brief explanation: There are no unusual circumstances related to drainage and flood control within the Project Site. Specifically, the Project will comply with all regulatory requirements related to drainage patterns and flood control, including the City's Low Impact Development and erosions control requirements. Thus, no impacts related to drainage and flooding would occur with construction of the Project and no mitigation measures are required.		
Noise		
4.10-1(a)	Noise Shielding and Silencing	☑ Yes ☐ No
4.10-1(b)	Use of Driven Pile Systems	☑ Yes ☐ No

Mitigation Measure		Proposed Housing Project Meets Threshold in MM in Program EIR MMP
4.10-1(c)	Enclosures and Screening	☑ Yes ☐ No
4.10-1(d)	Construction Staging Areas	☑ Yes ☐ No
4.10-1(e)	Temporary Sound Barriers	☑ Yes ☐ No
4.10-1(f)	Project-Specific Construction Noise Study	☑ Yes ☐ No
4.10-2	Project-Specific Operational Noise Study	☑ Yes ☐ No
4.10-3(a)	Vibration Control Plan	☑ Yes ☐ No
4.10-3(b)	Vibration Mitigation	☑ Yes ☐ No

Brief explanation:

Mitigation Measures 4.10-1(a) through 4.10-1(f) will be implemented as part of the Project. In accordance with Mitigation Measures 4.10-1(f) and 4.10-2, a noise study has been prepared and is included in Appendix D.4.

Public Services		
4.12-1(a)	Design Plans Review	☐ Yes ☑ No
4.12-1(b)	Emergency Access	☐ Yes ☑ No
4.12-1(c)	Hillside Fire/Vegetation Management Plan	☐ Yes ☑ No
4.12-1(d)	Submittal of Plot Plan	☐ Yes ☑ No
4.12-2(a)	Crime Prevention Unit Consultation	☑ Yes ☐ No
4.12-2(b)	Security During Construction	☑ Yes ☐ No

Mitigation Measure		Proposed Housing Project Meets Threshold in MM in Program EIR MMP
Brief explanation: The Applicant has submitted plans to the LAFD for review. In addition, the Project would comply with all LAFD requirements related to design and emergency access and LAFD has not found that existing regulations are inadequate to address fire safety and access. In addition, the Project Site is not located within a VHFHSZ or SRA or a hillside area. Furthermore, as discussed in Section 4.14, below, the Project will implement a Construction Management Plan to ensure adequate and safe access during construction. Thus, Mitigation Measure 4.12-1(a) through 4.12-1(d) are not applicable to the Project. The Project will implement Mitigation Measure 4.12-2(a) and Mitigation Measure 4.12-2(b).		
Transportation		
4.14-1	Construction Management Plan	☐ Yes ☑ No
4.14-2	Transportation Demand Management Program	☐ Yes ☑ No
Brief explanation: LADOT's existing guidelines require a construction management plan and thus this measure is not triggered. As demonstrated by the Transportation Assessment included as Appendix D.8, the Project will not result in significant impacts associated with VMT. As such Mitigation Measure 4-14-2 is not applicable to the Project. Nonetheless, the Project will incorporate bike parking per LAMC requirements, including short-term and long-term parking facilities and bicycle amenities.		
Tribal Cultural Resources		
4.15-1(a)	Native American Consultation and Monitoring for Discretionary Projects	☑ Yes ☐ No
4.15-1(b)	Discovery of Potential Tribal Cultural Resources	☑ Yes ☐ No

Mitigation Measure		Proposed Housing Project Meets Threshold in MM in Program EIR MMP
Brief explanation: In accordance with Mitigation Measure 4.15-1(a), a cultural resources assessment has been prepared and is included as Appendix D.5. The Project will also implement substitute Mitigation Measure for Mitigation Measure 4.15-1(b) as discussed below.		
Wildfire		
4.17-1	Hillside Construction Staging and Parking Plan	☐ Yes ☑ No
4.17-3	Undergrounding of Power Lines in and Near an SRA and VHFHSZs	☐ Yes ☑ No
Brief explanation: The Project Site is not located in a State Responsibility Area (SRA) or a Very High Fire Hazard Safety Zone (VHFHSZ) as mapped by the latest CalFire mapping. As such, Mitigation Measures 4.17-1 and 4.17-3 are not applicable to the Project. Refer to CalFire maps at https://experience.arcgis.com/experience/5065c998b4b0462f9ec3c6c226c610a9. In addition, the Department of City Planning concurs that the LAFD recommendations are adequate and the Project would not result in the impairment of emergency response or evacuation plans.		

D.2. Substitute Mitigation Measures

THE APPLICANT FOR THE PROPOSED HOUSING PROJECT IS PROPOSING SUBSTITUTED MITIGATION MEASURES FOR ANY OF THE MITIGATION MEASURES THAT ARE CHECKED AS "YES" ABOVE

☑ Yes ☐ No

If YES, include the substituted mitigation measures below, with the necessary findings showing the mitigation measure is equal or more effective to the mitigation measures in the Program Mitigation Monitoring Program at reducing the significant impact to less than significant and no new significant impact will result from the substitution:

Any attachments or technical studies that support findings will need to be printed out and attached to Appendix D and will be included in the project file.

WILL THE APPENDIX "A" WILL BE FILLED OUT? ☑ Yes ☐ No

Fill out the Appendix "A" page at the end of the checklist to list any substituted measures and any additional pages to support findings.

SECTION D CONCLUSION

Check one of the following (Note: this may require the analysis in Section E to be completed first):

☐ None of the mitigation measures from the Program MMP are applicable to the Proposed Housing Project.

☑ All applicable mitigation measures (including substitute measures and measures identified in studies or assessments required by a MM in the Program MMP) will be imposed on the Proposed Housing Project through the adoption of a Proposed Housing Project MMP and conditions of approval, or have already been incorporated into the Proposed Housing Project.

☐ Not all applicable mitigation measures will be imposed on the Proposed Housing Project through conditions of approval, or have already been incorporated into the Proposed Housing Project.

E. FINDING THAT SITE SPECIFIC EFFECTS FROM THE PROPOSED HOUSING PROJECT WERE ANALYZED IN THE PROGRAM EIR

E.1 Screening Criteria

The following screening questions shall be answered to evaluate whether the Proposed Housing Project has the potential for site-specific or project-specific circumstances or conditions to result in an environmental effect not examined in the Program EIR. If any of the following questions are answered 'Yes', further analysis will be required in Section E.2.

a. Did any mitigation measures marked "Yes" in Section D.1 require further analysis or study?
☑ Yes ☐ No

If **Yes**, prepare any studies and conduct any analysis required by the mitigation measure, per Section E.2.

b. Does the Proposed Housing Project lack compliance with a mitigation measure (including a substitute mitigation measure) identified as applicable to the Proposed Housing Project in Section D?
☐ Yes ☑ No

If **Yes**, determine if the environmental effect was examined in the Program EIR, per Section E.2.

c. Would the Proposed Housing Project require a variance or specific plan exception to provide relief from a standard required to protect scenic resources or scenic quality in an adopted Code, Specific Plan, or overlay ordinance (e.g., the Mulholland Scenic Parkway Specific Plan, the San Gabriel/Verdugo Mountains Scenic Preservation Specific Plan)?
☐ Yes ☑ No

If **Yes**, conduct an analysis of Questions I.a and I.c in Appendix G of the CEQA Guidelines to determine if the Proposed Housing Project will have an effect that was not examined in the Program EIR, per Section E.2.

d. Would the Proposed Housing Project involve the modification or destruction of a scenic resource or obstruction of public view of a scenic resource?
☐ Yes ☑ No

If **Yes**, conduct an analysis of Questions I.a and I.c in Appendix G of the CEQA Guidelines to determine if the Proposed Housing Project will have an effect that was not examined in the Program EIR, per Section E.2.

e. Would the Proposed Housing Project involve rezoning agriculturally zoned land?
☐ Yes ☑ No

If **Yes**, conduct an analysis of Question II.b in Appendix G of the CEQA Guidelines to determine if the Proposed Housing Project will have an effect that was not examined in the

Program EIR, per Section E.2.

f. Would the Proposed Housing Project be within 50 feet of a fault delineated on the Alquist-Priolo Earthquake Fault Zoning Map?

☐ Yes ☑ No

If **Yes**, conduct an analysis of Question VII.a.i in Appendix G of the CEQA Guidelines to determine if the Proposed Housing Project will have an effect that was not examined in the Program EIR, per Section E.2.

g. Would the Proposed Housing Project result in significant impacts to VMT using the thresholds and methodology provided in the LADOT Transportation Assessment Guidelines?

☐ Yes ☑ No

If **Yes**, conduct an analysis of VMT to determine if the Proposed Housing Project will have an effect that was not examined in the Program EIR, per Section E.2.

h. Would the Proposed Housing Project have peculiar or unique project or site characteristics from those analyzed in the Program EIR that could result in an effect not examined in the Program EIR (e.g., projects that conflict with an adopted Airport Land Use Plan or Water Quality Management Plan, or sites in use for mineral resource recovery (does not include oil and gas), projects involving septic tanks)?

☐ Yes ☑ No

If **Yes**, conduct an analysis to determine if the Proposed Housing Project will have an effect that was not examined in the Program EIR, per Section E.2.

i. Is the project located within one mile of a freeway offramp and does it require a transportation assessment by the Los Angeles Department of Transportation (DOT)?[1]

☐ Yes ☑ No

If **Yes**, conduct an analysis of freeway queueing, as required by DOT, to determine if the Proposed Housing Project will have an effect that was not examined in the Program EIR, per Section E.2.

SECTION E.1 CONCLUSION

After finishing review of the screening questions in Section E.1, check one of the following boxes.

☐ **ALL SCREENING QUESTIONS ARE MARKED 'NO'**

[1] Transportation assessments are typically required if the project would both generate a net increase of 250 or more daily vehicle trips and would result in a net increase in daily VMT. DOT would also require a transportation assessment if the project is replacing an existing number of residential units with a smaller number of residential units, and the proposed project is located within one-half mile of a heavy rail, light rail, or bus rapid transit station.

Pursuant to CEQA Guidelines Section 15168(c)(4), the environmental effects of the Proposed Housing Project were within the scope of the Program EIR. Prepare a Mitigation and Monitoring Program for the Proposed Housing Project (Project MMP). No further analysis is required.

☑ **ONE OR MORE SCREENING QUESTIONS ARE MARKED 'YES'**

Go to Section E.2.

E.2 Analysis to Determine if the Proposed Housing Project Would Have Effects Not Examined in the Program EIR

Instructions:

Conduct all analysis required in Section E.1 to determine if the Proposed Housing Project would have one or more environmental site- or project-specific effect(s) not examined in the Program EIR.

The following site- or project-specific effects are not effects that were examined in and within the scope of the Program EIR:

- a significant impact that would result because the Proposed Housing Project will not comply with a mitigation measure found applicable to the Proposed Housing Project from the Program EIR, or will not comply with a substituted mitigation measure of equal or equivalent effectiveness (see Conclusion in Section D).
- a significant impact in an impact category found in the Program EIR to be less than significant, less than significant with mitigation, or have no impact;
- a significant impact that cannot be mitigated to less than significant with mitigation measures in the Program EIR or by a substituted mitigation measure, in any of the following impact categories, which are impacts that by their nature would have impacts unique to the resource(s):
    - to a historical resource;
    - to a biological resource;
    - to an archaeological resource;
    - to a paleontological resource;
    - to tribal cultural resources;
    - related to hazardous materials; or
    - related to wildfires.

Without limitation, the following effects from a Proposed Housing Project are effects examined in and within the scope of the Program EIR:

- a significant and unavoidable impact related to criteria pollutant air quality standards from construction NOx, PM_{10} and $PM_{2.5}$ emissions;
- a significant and unavoidable impact related to criteria pollutant air quality standards from operational NOX, VOC, PM_{10}, and $PM_{2.5}$ emissions; or

- a significant and unavoidable impact (project or cumulative) related to construction and operational noise or vibration impacts.

SECTION E.2 ANALYSIS

Complete analysis required in Sections E.1 and E.2 below. Analysis required in E.1 should include why the project will or will not have a significant impact, any required mitigation measure, whether any significant impact is within the Program EIR, and summarize the conclusion of any required study or assessment. If more space is required to provide analysis, it can be attached as Appendix "C." Attach any studies or assessments to Appendix "D."

The following analysis is provided as required based on the following questions from Section E.1 and E.2:

ADDITIONAL ANALYSIS IS PROVIDED IN APPENDIX "C" ☑ Yes ☐ No

STUDIES OR ASSESSMENTS ARE ATTACHED IN APPENDIX "D' ☑ Yes ☐ No

SECTION E.2 CONCLUSION

Based on the analysis above, and the whole of the administrative record, substantial evidence supports that (check one):

☑ **THE PROPOSED HOUSING PROJECT WILL NOT HAVE EFFECTS NOT EXAMINED IN THE PROGRAM EIR.**

The Proposed Housing Project is fully within the scope of the program and its impacts were examined in the Program EIR. Prepare a Mitigation and Monitoring Program for the Proposed Housing Project (Project MMP) for all mitigation measures identified in Subsection D and E, as applicable. No additional environmental analysis documents need to be prepared.

☐ **THE PROPOSED HOUSING PROJECT WILL HAVE ONE OR MORE EFFECTS NOT EXAMINED IN THE PROGRAM EIR.**

A tiered negative declaration or tiered environmental impact report will be prepared for the following environmental effect(s) pursuant to CEQA Guidelines Section 15152:

Impacts to be Analyzed in Tiered CEQA Clearance:

All other effects are within the scope of the Program EIR and require no further analysis pursuant to CEQA Guideline Section 15152. The analysis provided herein shall be relied upon, in part, to support adoption of the tiered document as only being required to analyze the above listed impact(s).

APPENDIX A

SUBSTITUTED MITIGATION MEASURES

List any Substituted Mitigation Measures, if any, along with any additional documents to support findings in the section below. State the MMs being substituted for, state the name of the substitute MM being used in the Project MMP. Substitute MMs should be identified with the prefix "SMM." Also include an explanation of how the Substitute MM is equal or more effective at preventing or reducing a significant impact and discuss whether the SMM will result in new significant impacts; do not merely state conclusions.

As discussed further below, two SMMs have been proposed with regard to archaeological and tribal cultural resources.

Archaeological Resources

The following substitute mitigation measure replaces Section I of Mitigation Measure 4.4-2:

> **SMM Section I**—Prior to issuance of a grading permit and prior to the start of any ground-disturbing activity, the applicant shall retain a qualified archaeologist who meets the Secretary of the Interior's Professional Qualification Standards to oversee an archaeological monitor who shall be present during construction excavations, such as demolition, clearing/grubbing, grading, trenching, or any other construction excavation activity associated with the project, including peripheral activities, such as sidewalk replacement, utilities work, and landscaping, which may occur adjacent to the project site. The frequency of monitoring shall be based on the rate of excavation and grading activities, the materials being excavated (younger sediments vs. older sediments), the depth of excavation, and, if found, the abundance and type of archaeological resources encountered. Full-time monitoring may be reduced to part-time inspections, or ceased entirely, if determined adequate by the qualified archaeologist. Prior to commencement of excavation activities, Archaeological Sensitivity Training shall be given for construction personnel. The training session shall be carried out by the qualified archaeologist and shall focus on how to identify archaeological resources that may be encountered during earthmoving activities and the procedures to be followed in such an event.
>
> The details of the monitoring and training shall be summarized in an Archaeological and Tribal Cultural Resources Monitoring Plan (Monitoring Plan) prepared by the qualified archaeologist, in consultation with all interested Tribes, prior to the commencement of ground disturbing activities for the project. The Monitoring Plan shall include compliance with Section J of Mitigation Measures 4.4-2 and Mitigation Measure 4.15-1(b), including the portions referring to the implementation of a Cultural Resources Monitoring Program (CRMP). The Monitoring Plan will provide details regarding the process for infield treatment of inadvertent discoveries of archaeological and tribal cultural resources and the disposition of inadvertently discovered non-funerary resources, and shall be consistent with the treatment of unique archaeological resources in PRC Section 21083.2.

SMM Section I maintains the same requirements in Section I of Mitigation Measure 4.4-2 and adds a provision that requires the qualified archaeologist to prepare a Monitoring Plan. The Monitoring Plan provides details on the implementation of the archaeological monitoring and worker training, as well

as the inadvertent discovery protocol described in Section J of Mitigation Measure 4.4-2. Because Native American archaeological resources potentially encountered in the Project Site may also be a tribal cultural resource, SWCA recommends that the Monitoring Plan address both archaeological and tribal cultural resources by incorporating the same requirements described for the "cultural resources monitoring program (CRMP)" as defined in Mitigation Measure 4.15(a). Moreover, because the mitigation measures for each type of resource require equivalent actions to be taken, a Monitoring Plan that addresses both types of resources together will help to ensure consistency during implementation of the mitigation measures. The potential for impacts to an archaeological or tribal cultural resource is the same if the mitigation measures are implemented according to the Monitoring Plan. Thus, substituting Section I of Mitigation Measure 4.4-2 is more effective and will not cause a new significant impact. With the exception of Section J of Mitigation Measure 4.4-2, no other portions of Mitigation Measure 4.4-2 are necessary to reduce potentially significant impacts because the provisions apply to resources identified before Project construction or are superseded by the more detailed requirements in SMM Section I.

Tribal Cultural Resources

The following substitute mitigation measure replaces Mitigation Measure 4.15.1 (b):

> **SMM TCR-MM-1**—Prior to commencing any Ground Disturbance Activities at the Project Site, the Applicant, or its successor, shall retain a qualified tribal monitor from the Gabrieleño Band of Mission Indians—Kizh Nation (Tribe). Ground Disturbance Activities shall include demolition, excavating, digging, trenching, plowing, drilling, tunneling, quarrying, grading, leveling, clearing, driving posts, augering, backfilling, blasting, stripping topsoil, potholing, pavement removal, grubbing, tree removals, boring or a similar activity at the project site. Prior to the commencement of any Ground Disturbance Activities, the Applicant and the Tribe shall execute an agreement for a tribal monitor at a reasonable rate, determined in good faith, consistent with industry standards, taking into account factors such as the scope and duration of the Project and substantial evidence for the presence or absence of tribal cultural resources. If the terms of service cannot be agreed upon, or if no response is received within 10 days of soliciting a request, the Applicant may contact another California Native American tribe included on the Native American Heritage Commission's Tribal Contact List and request the services of a tribal monitor.
>
> Prior to commencing any Ground Disturbance Activities, the tribal monitor, shall provide Worker Environmental Awareness Program (WEAP) training to construction crews involved in Ground Disturbance Activities that includes information on regulatory requirements for the protection of tribal cultural resources. As part of the WEAP training, construction crews shall be briefed on proper procedures to follow should a crew member discover tribal cultural resources during Ground Disturbance Activities. In addition, workers will be shown examples of the types of resources that would require notifying the tribal monitor. The Applicant shall maintain on the Project Site, for potential City inspection, documentation establishing the WEAP training was completed for all members of the construction crew involved in Ground Disturbance Activities.
>
> The tribal monitor shall observe Ground Disturbance Activities on the Project Site when they are taking place in sediments capable of containing tribal cultural resources, as determined by a Qualified Archaeologist in consultation with the Tribe and supported by substantial evidence. The tribal monitor(s) will complete daily monitoring logs that will provide descriptions and locations of the relevant Ground Disturbing Activities, the type of construction activities performed, soil types,

cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor logs will identify and describe any discovered tribal cultural resources as defined in California Public Resources Code Section 21074. Copies of monitor logs will be provided to the project applicant and/or the City upon request to the Tribe(s). The tribal monitoring shall end when either 1) confirmation is received from the Applicant, in writing, that all scheduled activities pertaining to tribal monitoring and all Ground Disturbance Activities are completed; or 2) the Tribe(s) provides a determination, in writing and supported by substantial evidence, that no future, planned construction activity, and/or development/construction phase at the project site possesses the potential to impact any tribal cultural resources.

In the event that any objects or artifacts that may be tribal cultural resources are encountered during the course of any Ground Disturbance Activities, all such activities shall temporarily cease within the area of discovery, the radius of which shall be 50 feet or otherwise determined by the Qualified Archaeologist in consultation with the tribal monitor, until the potential tribal cultural resource is properly assessed and addressed pursuant to the process set forth below:

1. If the Qualified Archaeologist and Tribe determine the resources are Native American in origin, the Tribe will recommend steps for treatment of all discovered tribal cultural resources in the form and/or manner the Tribe deems appropriate, in the Tribe's reasonable discretion, and for any purpose the Tribe deems appropriate, including for educational, cultural and/or historic purposes.

2. The Applicant shall implement the Tribe's recommendations if the Qualified Archaeologist concludes that the Tribe's recommendations are reasonable and feasible. In addition to any recommendations from the Tribe(s), the Qualified Archaeologist shall develop a list of actions that shall be taken to avoid or minimize impacts to the identified tribal cultural resources substantially in compliance with any applicable federal, state or local law, rule or regulation, including but not limited to Public Resources Code Section 21083.2.

3. Ground Disturbance Activities may recommence outside of the specified radius of the discovery site, so long as this radius has been reviewed by both the archaeological monitor and tribal monitor(s) and determined to be reasonable and appropriate, and so long as the Applicant has complied with all of the recommendations developed and approved pursuant to the process set forth in Paragraphs 1 and 2 above.

4. Copies of any subsequent archaeological study, tribal cultural resources study or report, detailing the nature of any significant tribal cultural resources, remedial actions taken, and disposition of any significant tribal cultural resources shall be submitted to the South Central Coastal Information Center at California State University, Fullerton and to the Native American Heritage Commission for inclusion in its Sacred Lands File.

5. Notwithstanding Paragraph 4 above, any information that Los Angeles Department of City Planning, in consultation with the Los Angeles City Attorney's Office, determines to be confidential in nature shall not be published under the applicable provisions of the Government Code Sections 7929.000 and 7929.005, and subdivision (d) of Section 15120 of Title 14 of the California Code of Regulations.

6. Archaeological and Native American monitoring and excavation during construction projects will be consistent with current professional standards. All feasible care to avoid any unnecessary disturbance, physical modification, or separation of human remains and associated funerary objects shall be taken.

SMM TCR-MM-1 includes provisions that satisfy the same minimum requirements in Mitigation Measure 4.15-1(b) but adds requirements for worker training and tribal monitoring in areas with sensitivity for tribal cultural resources. The substitute measure includes elements of the three measures requested by the Gabrieleño Band of Mission Indians—Kizh Nation, specifically the elements stipulating the requirements for and methods used by a tribal monitor during ground-disturbing activities. The other elements of the measures requested by the Gabrieleño Band of Mission Indians—Kizh Nation are addressed in the other provisions of the substitute measure based on the minimum requirements incorporated from Mitigation Measure 4.15-1(b), such as requirements for tribal consultation while assessing potential tribal cultural resources and identifying appropriate forms of treatment for confirmed resources. The substitute measure also incorporates additional details to clarify the performance standards and ensure compliance with existing regulations, conformance with industry standards and best practices, and compatibility with other mitigation measures for the Project, specifically those for archaeological resources.

SMM TCR-MM-1 and Section J of Mitigation Measure 4.4-2 require an archaeological monitor to be present during excavations, provide archaeological sensitivity training to construction personnel prior to initiating construction, and then follow an archaeological resource discovery protocol. Details on these procedures would be described in a Monitoring Plan that SWCA recommends be included as part of the substitute measure. The provisions in these measures would apply to a Native American site, feature, or object that may also be a tribal cultural resource. Implementation of substitute measure TCR-MM-1 would ensure that any potential tribal cultural resources discovered during Project activities would be assessed as a tribal cultural resource and subject to appropriate forms of treatment. Specific procedures to implement the inadvertent discovery protocol would already be included in the Monitoring Plan, which would function in the same capacity as and incorporate all performance standards as the CRMP defined in Mitigation Measure 4.15-1(b).

By maintaining the same minimum requirements in Mitigation Measure 4.15-1(b) and adding requirement to conduct tribal monitoring, consistent with the sensitivity assessment and measures requested by the Gabrieleño Band of Mission Indians—Kizh Nation, the substitute mitigation measure TCR-MM-1 is more effective and will not cause a new significant impact to tribal cultural resources.

.

APPENDIX B

PROJECT MMP

Include the Mitigation Monitoring Program for the Proposed Housing Project as an attachment. Include any Mitigation Measures still to be implemented by the Project. This includes:

- Measures directly taken from the Program MMP, to be included in the Project MMP verbatim (these would be measures that did not require a study or assessment in Screening Criteria E.1.a),
- Measures identified in a study or assessment required by MMs from the Program MMP, incorporated in the Project MMP as implementation measures, and
- Measures included as substitutes for measures in the Program MMP, included as Substituted Mitigation Measures in the Project MMP and analyzed in Appendix "A."

APPENDIX C

ADDITIONAL ANALYSIS

Any additional analysis needed to demonstrate support for the conclusions found in the Housing Element Checklist form should be included here as Appendix C. Only include enough analysis necessary to support the conclusions in the Checklist form; do not conduct an Initial Study-style analysis of every impact category. Recall that a Program EIR has already been certified for the Housing Element, and the analysis here in the Checklist is to show that the project is included within the scope of the Program EIR, and that the applicable mitigation measures have been incorporated into the Project's Conditions of Approval. Include references to which part of the Checklist any analysis in this Appendix is intended to support.

Air Quality

The Project will require greater than 5,000 cubic yards of cut and fill and will result in more than 150 daily truck trips during construction. As such, an evaluation of construction emissions is included as Appendix D.1. As demonstrated therein, with use of off-road equipment greater than 50 horsepower that meets Tier 4 emission standards, the Project would not result in significant construction-related air quality impacts and no additional mitigation measures are required.

With regard to operational air quality impacts, the Project includes more than 612 multi-family residential units. As such, an evaluation of operational air quality emissions associated with the Project is included as Appendix D.1. As demonstrated therein, operation of the Project would not result in significant operational-related air quality impacts and no additional mitigation measures are required.

Biological Resources

In accordance with Mitigation Measure 4.3-2(b), a protected tree survey was prepared for the Project and is included in Appendix D.2. As demonstrated therein, none of the on-site trees are species that are protected by the City of Los Angeles' Protected Tree & Shrub Ordinance No. 186873. Thus, no protected trees are shrubs would be removed as part of the Project. In addition, no street trees would be removed as part of the Project. Thus, no impacts would occur and no additional mitigation measures are required.

Cultural Resources

The Project Site includes the Los Angeles Union Wholesale Terminal (District) that was formally determined eligible for the National Register of Historic Places and is listed in the California Register. In addition, 12 other historical resources are located in the Project vicinity. As such, a historical resources assessment was prepared in accordance with Mitigation Measure 4.4-1(a) and is included in Appendix D.3. As discussed therein, the Development Area is comprised of surface parking areas and does not include any historical resources. Thus, the Project would not demolish, destroy, relocate, or alter any of the contributing buildings in the District, and the District and its contributing buildings would retain all of their character-defining features and would continue to have sufficient integrity to convey their significance following completion of the Project. The assessment also found that the Project would not materially impair the significance of any of the historical resources in the

vicinity of the Project Site. In addition, as evaluated in Appendix D.4, construction of the Project would not result in vibration impacts to on- or off-site historical resources. Therefore, the Project would not have a significant impact on any historical resources on or in the vicinity of the Project Site.

In accordance with Mitigation Measure 4.4-2, a cultural resources assessment was prepared and is included in Appendix D.5. As concluded therein, with implementation of a SMM for Section I of Mitigation Measure 4.4-2 that incorporates more stringent requirements including a Monitoring Plan during grading and excavation, potential impacts would be less than significant and no additional mitigation measures would be necessary.

Geology and Soils

In accordance with Mitigation Measure 4.5-1(a), a paleontological resources assessment has been prepared and is included as Appendix D.6. The paleontological resources assessment concludes that with implementation of Mitigation Measures 4.5-1(b) through 4-5-1(d), potential impacts to paleontological resources resulting from construction of the Project would be less than significant and additional mitigation measures would be required.

Hazards and Hazardous Materials

The Project Site includes a Hybrid Industrial zoning designation and there are listed hazardous materials sites within 500 feet of the Project Site and thus Mitigation Measure 4.7-2(a) is triggered. This mitigation measure will also be implemented in accordance with EPM HM1-2, which includes the same provisions as Mitigation Measure 4.7-2(a). In accordance with this measure, a Phase I and Phase II Site Assessment were prepared for the Project. These reports are attached as Appendix D.7. The Phase II requires monitoring and recommended implementation of a Vapor Intrusion Mitigation System (VIMS) membrane to address potential soil gas impacts along with a Soils Management Plan (SMP). In accordance with Mitigation Measure 4.7-2(b), a Health & Safety Plan (HASP) was also recommended as part of the Phase II to be developed in the future grading work at the site. The SMP, which is included in Appendix D.7, provides procedures for identification, segregation, verification sampling and profiling for off-site disposal of impacted soil. The HASP, which is also included in Appendix D.7, specifies procedures for protection of worker and community health and safety during implementation of the removal action. The VIMS membrane recommended for the Project as part of the Phase II has been incorporated as Implementing Mitigation Measure 4.7-2(c) and includes provisions for performance monitoring of the engineering control system to address vapor intrusion into the residential structures. With implementation of the procedures in the SMP and HASP and Implementing Mitigation Measure 4.7-2(c), Project impacts associated with hazards and hazardous materials would be less than significant. No additional mitigation measures are required.

Noise

Mitigation Measures 4.10-1(a) through 4.10-1(f) would be implemented as part of the Project and are also same requirements set forth in EPMs NV1-1 through NV1-6 that are incorporated into Chapter 1A of the Zoning Code and apply to the Project.

APPENDIX C

In accordance with Mitigation Measures 4.10-1(f) and 4.10-2, a noise study has been prepared and is included in Appendix D.4. The noise study addresses potential impacts associated with construction and operation of the Project and concludes that noise impacts would be less than significant and no additional mitigation measures would be required.

The Project would also implement a Vibration Control Plan as set forth in Mitigation Measure 4.10-3(a). The Vibration Control Plan would ensure that potential vibration impacts to nearby historical resources would be less than significant.

The Project would also implement Mitigation Measure 4.10-3(b), which prohibits impact pile drivers and metal-tracked equipment and requires that construction activities be managed and coordinated to limit vibration.

Public Services

In accordance with Mitigation Measure 4.12-2(a), the Los Angeles Fire Department has reviewed the Project and the Planning Department has confirmed with LAFD that the requirements under the Fire Code are adequate to mitigate potential impacts based on unusual site, roadway, or project conditions. In addition, the Project will implement security during construction as specified by Mitigation Measure 4.12-2(b).

Tribal Cultural Resources

In accordance with Mitigation Measure 4.15-1(a), a cultural resources assessment that includes an evaluation of potential impacts associated with tribal cultural resources has been completed for the Project and is included as Appendix D.5. As part of the tribal cultural resources assessment, tribal consultation has occurred.

The Project will implement SMM TCR-1, which is more protective than and replaces Mitigation Measure 4.15-1(b). As discussed in the tribal cultural resources assessment included as Appendix D.5, when implemented in conjunction with substitute text for Section I of Mitigation Measure 4.4-2, which provides for a Monitoring Plan, this substitute mitigation measure would reduce potentially significant impacts to tribal cultural resources to less-than-significant levels and no additional mitigation measures would be required.

Conclusion

As demonstrated by the information provided in this checklist, the Project is included within the scope of the Program EIR and all applicable measures from the Program EIR will be incorporated into the Project's Conditions of Approval. In addition, as discussed above, the Project includes two more stringent substitute relative to archaeological and tribal cultural resources and also includes additional Implementing Mitigation Measure 4.7-2(c) that requires implementation of a VIMS membrane system to address potential soil vapor intrusion. With implementation of these mitigation measures, no significant impacts would occur and no other mitigation measures would be required.

APPENDIX D

TECHNICAL STUDIES OR ASSESSMENTS

Any attachments or technical studies that support findings will need to be printed out and attached as Appendix D, and will be included in the project file. This includes any studies required by mitigation measures from the Program EIR. Include the studies themselves here, and any analysis based on them elsewhere as appropriate.

The following technical studies are included as Appendix D:

Appendix D.1 – Air Quality Analysis
Appendix D.2 – Protected Tree Survey
Appendix D.3 – Historical Resources Report
Appendix D.4 – Noise Report
Appendix D.5 – Cultural Resources Report
Appendix D.6 – Paleontological Resources Assessment
Appendix D.7 – Hazards Reports (Phase I, Phase II and Soil Gas Study, Soil Management Plan, and Health and Safety Plan)
Appendix D.8 – Transportation Assessment

Additional Project Description Information

Proposed Housing Project

Brief Description of Proposed Project:

Zoning and the General Plan Land Use Designation

The City Council adopted the Downtown Community Plan Update (DTLA 2040) on May 3, 2023, and it became effective on January 27, 2025. Along with the approval of DTLA 2040, new zones created through the City's comprehensive zoning code update were adopted, and new general plan land use designations and zones were applied to parcels within the Downtown Community Plan area. With the adoption of DTLA 2040 and the new zones, the Project Site is designated as Hybrid Industrial and is zoned as [MB2- SH1-5] [IX3-FA] [CPIO] ([Mid-Rise Broad 4 Form District, Shopfront 1 Frontage District, Development Standard District 5] [Industrial Mixed 3 Use District, Limited By Floor Area Density District] [Downtown Community Plan Implementation Overlay District]). The MB2 Form District, IX3 Use District, and the FA Density District are expressly corresponding districts to the Project Site's Hybrid Industrial land use designation. The Project Site's zoning is therefore consistent with the Project Site's land use designation. The MB2 Form District allows for zero setback with a base Floor Area Ratio of 3:1, and unlimited height. The SH1 Frontage District specifies frontage design requirements, including requiring street-facing entrances. Development Standard District 5 prioritizes pedestrian experience with the intent to ensure buildings are integrated with the surrounding public realm and promotes walking as a safe and convenient mobility option. The IX3 Use District zone allows for allows for a broad range of uses, including: schools, medical facilities, retail and commercial services, and residential dwelling.

Project Description

As shown on Table 1, the Project proposes a mixed-use residential and commercial development within three buildings containing 1,000 residential units including 11% Verly Low Income units (VLI) (114 VLI units) and 6,547 square feet of commercial (retail/restaurant) within the Development Area. Building A would include 1,119 square feet of commercial uses located on the first floor; 410 residential units at first though eighth floor; and two levels of subterranean parking as well as above grade parking located on the first floor. Building B would include 214 residential units located on the first through eighth floor, and two levels of subterranean parking as well as above grade parking located on the first floor. Building C would include 5,428 square feet of commercial uses on the first floor; 376 residential units at the first through eighth floor; and two levels of subterranean parking as well as above grade parking located on the first floor. The proposed buildings would range from approximately 100 feet to 103 feet in height. Upon completion, 884,278 square feet of new floor area would be provided within the

Development Area. When accounting for the existing floor area to remain, a total of approximately 2,477,695 square feet of floor area would be provided within the Project Site for a total averaged FAR of 1.86:1. The Project would include 1,092 vehicular parking spaces. The Project would include a total of 96,278 square feet of open space within the Development Area of which 90,378 square feet would be common open space and 5,900 square feet would be private open space. Common open space would be provided in the form of amenities such as lobby areas, gym, lounge areas, pool, and outdoor seating areas. The Project would also include 88,275 square feet of landscaped areas. The existing uses within the remainder of the Project Site outside of the Development Area would remain and would not be modified by the Project.

Table 1
Proposed Project

Land Use	Proposed Development
Studio	516 du
Residential: APT—1 BDR	402 du
Residential: APT—2 BDR	82 du
Commercial	6,547 sf
Covered Parking	374,945 sf
Gym	1,500 sf
Resident Lounge Areas	10,240 sf
Total	

Source: Eyestone Environmental, 2025.

Lighting and Signage

All Project lighting would comply with current energy standards and codes (i.e., California Code of Regulations, Title 24, Part 11; referred to as the CALGreen Code) in effect at the time of construction while providing appropriate light levels to accent signage, architectural features, and landscaping elements. Light sources would be shielded and/or directed toward Project Site areas to minimize light spill-over to neighboring properties and the surrounding area while utilizing low-level exterior lights at the site perimeter, as needed, for aesthetic, security, and wayfinding purposes. Additionally, new street and pedestrian lighting within the public right-of-way would provide appropriate and safe lighting levels on both sidewalks and roadways, while minimizing light and glare on adjacent properties, in compliance with applicable City regulations and with approval by the City's Bureau of Street Lighting. Glass in building façades would be selected for qualities such as low reflectivity to reduce glare; energy efficiency to limit solar heat gain; high visibility for adequate light transmission; and acoustic performance to reduce noise from outside.

Sustainability Features

The Project would support environmental sustainability by incorporating sustainable building features and construction protocols required by the Los Angeles Green Building Code (LAMC Chapter IX, Article 9), the California Green Building Standards Code (California Code of Regulations, Title 24, Part 11; referred to as the CALGreen Code), and the California Building Energy Efficiency Standards (California Code of Regulations, Title 24, Part 6; California Energy Code). The Project also represents an infill development in close proximity to existing bus lines and would utilize and/or improve existing pedestrian and utility infrastructure to service the proposed uses. Sustainability features would include, but are not limited to, water conservation features that include the use of native plants, passive cooling strategies, Energy Star–labeled appliances, a bicycle-friendly site design, and waste reduction features.

Furthermore, the Project would comply with the City's electric vehicle (EV) charging station ordinance, which requires at least 40 percent of residential parking spaces capable of supporting future electric vehicle supply equipment (EVSE) and 10 percent of the residential parking spaces equipped with EVSE to create electric vehicle (EV) charging stations.

Off-Site Improvements

The Project would require minor off-site improvements that would generally be contained within the adjacent rights-of-way to the Project Site. Off-site improvements would consist of the removal/relocation of curb, sidewalk and street improvements, planting of street trees, and removal and installation of various underground utility infrastructure.

Anticipated Construction Schedule

Project construction would begin with the demolition of surface parking areas. The Project would be constructed in phases starting with the South Lot Buildings commencing construction from 2026 to 2029, and the North Lot Building from 2030 to 2032. The foundation would then be laid, followed by building construction, and then finally paving and landscaping installation. Project excavation would extend to a depth of up to 28 feet below ground surface. It is estimated that up to 152,610 cubic yards of export would be hauled off the Project Site. Haul trucks would generally travel out of the Project Site onto 7th Street and along Alameda Street to and from Interstate 10 and the Project Site.

Requested Permits and Approvals

Approvals required for the Project would include, but may not be limited to:

- Pursuant to Los Angeles Municipal Code (LAMC) Section 17.15, a Vesting Tentative Tract Map No. VTT-84331-HCA to permit the merger and re-subdivision of three (3) lots to allow five (5) ground lots and 14 airspace lots in the M2-2D Zone (current [MB2 -SH1-5] [IX3-FA] [CPIO] Zone);

- Pursuant to LAMC Section 17.13, a haul route approval for the export of approximately 152,610 cubic yards of earth materials from the project site;
- Pursuant to LAMC Section 17.11, a Modification of Requirements in conjunction with a Vesting Tentative Tract Map for the waiver of required dedications and street improvements along Central Avenue, 7th Street, and Alameda Street; and for the waiver of a requirement to remove and replace the existing roadway pavement, curb, gutter, and sidewalk.
- Pursuant to Los Angeles Municipal Code (LAMC) Section 9.2.1 of Chapter 1A, a Density Bonus Compliance Review to permit a residential development project consisting of 1,000 dwelling units of which 114 units will be set aside for Very Low Income Households, and with the following On- and Off-Incentives and Waivers of Development Standards:
    a. An On-Menu Incentive to permit averaging of FAR, density, parking, open space, or vehicular access;
    b. An Off-Menu Incentive to permit the continued use of an existing 8-foot fence in the front yard in lieu of the 3.5-foot fence height otherwise required in the [SH1] District(129% increase);
    c. A Waiver of Development Standard to permit a building width of 377-feet and 10-inches for Building C in lieu of the 280-feet otherwise required in the [MB2] District (35% increase);
    d. A Waiver of Development Standard to permit a maximum Build-to-Depth of 8-feet in lieu of the 5-feet otherwise required in the [SH1] District (60% increase);
    e. A Waiver of Development Standard to permit a minimum primary street ground story transparency of 49% in lieu of the 70% otherwise required in the [SH1] District (30% reduction);
    f. A Waiver of Development Standard to permit a ground story height of 13-feet and 6-inches in lieu of the 16-feet otherwise required in the [SH1] District (16% reduction);
    g. A Waiver of Development Standard to allow through access in the North Lot provided at 391-feet and 6-inches in lieu of the 350-feet otherwise required in the [D5] District (12% increase);
    h. A Waiver of Development Standard to permit relief from the Pedestrian Access requirements per LAMC Section 4C.1.1.C.2. (Package 1) to allow pedestrian access to the units that are not directly from the street;
    i. A Waiver of Development Standard to allow floors 2-5 primary street transparency of 24% in lieu of the 30% as required be LAMC Section 3B.4.1 for the [SH1] District (20% reduction); and

j. A Waiver of Development Standard to permit a maximum Build-to-Width of 65% minimum in lieu of the 90% minimum required per LAMC Section 3B.4.1 for the [SH1] District (28% reduction);

- Pursuant to LAMC Section 13B.2.4, a Project Review for a development creating over 50 market rate dwelling units on the project site; and
- Pursuant to LAMC Section 13B.5.3, a Variance to allow three projecting signs at the project site to have 300 square feet per sign face (combined projecting sign face area of 1,800 square feet) in lieu of the 48 square feet per sign face otherwise required per LAMC Section 4C.11.6-C.9.D.

A. Proposed Housing Project Context

A.1 Project Location Details

The Project Site consists of three large, irregularly shaped parcels that collectively measure approximately 30.65 acres and is located within the Downtown Community Plan area of the City of Los Angeles. The Project Site is located at 747–787 S. Alameda Street, 1312–1396 E. 7th Street, 136-196 S. Central Avenue, 1301–1327 E. 8th Street, 700–760 S. Market Court, 720–746 S. Terminal Street, and 747 and 760 S. Warehouse St. Los Angeles, CA 90021. The Project Site occupies the northern half of the block bounded by E. 7th Street on the north, S. Central Avenue on the west, S. Alameda Street on the east, and E. Olympic Boulevard to the south, with the partially vacated former E. 8th and Bay streets providing internal access within the middle of the block.

The Project Site is comprised of an industrial complex historically called the Los Angeles Union Wholesale Terminal, previously owned by the Southern Pacific Railroad, which currently encompasses a total of eight buildings, including seven large industrial buildings that were constructed between 1917 and 1923, and a ten-story parking garage constructed in 2016 which is accessed via S. Alameda Street. The portion of the Project Site along Central Avenue is used as a wholesale produce market and an outdoor weekend market known as the Smorgasburg. The middle portion of the Project Site between 7th and 8th Street supports 46 retailers and restaurants and another 48 office and hybrid office/light industrial tenants which span multiple industries including technology, apparel, construction, produce wholesale and consumer goods, with the exception of 747 S. Alameda Street which is currently vacant. No construction activities under the Project would occur within these portions of Project Site.

The proposed Development Area is approximately 4.84 gross acres and is located within the eastern portion of the Project Site along Alameda Street at 747-787 S. Alameda St., 1390-1396 E. 7th St. Los Angeles, CA 90021. The Development Area is currently developed with surface parking and limited ornamental vegetation.

A.2 Surrounding Area and Uses

The Project Site is located in an expansive industrial district east of Downtown Los Angeles. The area surrounding the Project Site is primarily developed with warehouses, cold storage facilities, small-scale manufacturing operations, and other industrial uses, though in more recent years commercial office, commercial retail, and residential uses have been developed in the vicinity of the Project Site.

Appendix B: Mitigation Monitoring Program

Public Resources Code (PRC) Section 21081.6 and California Environmental Quality Act (CEQA) Guidelines Section 15097 require adoption of a Mitigation Monitoring Program (MMP) for all projects for which an Environmental Impact Report (EIR) has been prepared. Specifically, PRC Section 21081.6 states:

> *... the agency shall adopt a reporting or monitoring program for the changes made to the project or conditions of project approval, adopted in order to mitigate or avoid significant effects on the environment ... [and that the program] ... shall be designed to ensure compliance during project implementation.*

CEQA Guidelines Section 15097 provides guidelines for implementing monitoring and reporting programs. Specific monitoring requirements to be enforced during project implementation must be defined prior to final approval of a project by the decision-maker. Although the Lead Agency (the City of Los Angeles) may delegate monitoring responsibilities to other agencies or entities, the Lead Agency "... remains responsible for ensuring that implementation of the mitigation measures occurs in accordance with the program."

Further, pursuant to the City of Los Angeles Housing Element Checklist, this MMP has been prepared in accordance with the City's Housing Element Checklist Instructions. Specifically, this MMP includes the mitigation measures set forth in the Program EIR that are applicable to the Project. This MMP describes the procedures for the implementation of the mitigation measures adopted for the Project. This MMP for the Project is effective until the mitigation measures have been satisfied or deleted/modified pursuant to this MMP. The City of Los Angeles Department of City Planning (DCP) staff and staff of other City Departments (e.g., Department of Building and Safety) are responsible for administering the MMP activities, or delegating them to consultants or contractors. The Monitoring or Enforcing Agencies identified herein, at their discretion, may require a project applicant or operator to pay for one or more independent professional(s), with any necessary training and qualifications, to be responsible for preparing, reviewing, or certifying any required report, study, analysis, or certification, or monitoring implementation of mitigation measures (e.g., City building inspector, project contractor, certified professionals, etc., depending on the requirements of the mitigation measures) required of project applicants or operators. Monitors will be hired by the City or by the applicant or operator at the City's discretion.

Each mitigation measure is identified in the table below and is categorized by environmental topic and corresponding number, with identification of:

- The Implementing Party—this is in most cases, the applicant for individual projects who will be required to implement most of the measures subject to City review and approval.
- The Enforcement Agency and Monitoring Agency—this is the agency or agencies that will monitor each measure and ensure that it is implemented in accordance with this MMP.
- Monitoring Phase/Monitoring Actions—this is the timeframe that monitoring would occur and the criteria that would determine when the measure has been accomplished and/or the monitoring actions to be undertaken to ensure the measure is implemented.

All the identified mitigation measures herein are to be implemented through the City's imposition of conditions of approval on future discretionary projects This MMP shall be enforced throughout all phases of the Project that are subject to the mitigation measures. The applicant shall be responsible for implementing each mitigation measure and shall be obligated to provide certification, as identified below, to the appropriate monitoring agency and the appropriate enforcement agency that each mitigation measure has been implemented. The applicant shall maintain records demonstrating compliance with each mitigation measure. Such records shall be made available to the City upon request. Further, specifically during the construction phase (including excavation, grading and demolition) and prior to the issuance of building permits, the applicant shall retain an independent Construction Monitor (either via the City or through a third-party consultant), approved by the Department of City Planning, who shall be responsible for monitoring implementation of mitigation measures during construction activities consistent with the monitoring phase and frequency set forth in this MMP. The Construction Monitor shall also prepare documentation of the applicant's compliance with the mitigation measures during construction every 90 days. The documentation must be signed by the applicant and Construction Monitor and be maintained by the applicant. The Construction Monitor shall be obligated to immediately report to the Enforcement Agency any non-compliance with the mitigation measures within two business days if the applicant does not correct the non-compliance within a reasonable time of notification to the applicant by the monitor or if the non-compliance is repeated. Such non-compliance shall be appropriately addressed by the Enforcement Agency. Until two years after all mitigation measures are fully satisfied, the applicant and owner shall maintain all records of mitigation measure compliance (e.g., reports, studies, certifications, verifications, monitoring or mitigation plans) and make available for the City's inspection within three business days of the City requesting the records. All records related to construction shall be maintained on the site during construction and shall be immediately available for inspection by the City or by the Construction Monitor. The applicant/owner shall

also sign a Statement of Compliance, in a form approved by the City, prior to any building permit, committing to compliance with all applicable mitigation measures.

The Project shall be in substantial conformance with the mitigation measures contained in this MMP. The enforcing departments or agencies may determine substantial conformance with mitigation measures in the MMP in their reasonable discretion. If the department or agency cannot find substantial conformance, a mitigation measure may be modified or deleted as follows: the enforcing department or agency, or the decision maker for a subsequent discretionary project related approval, complies with CEQA Guidelines, including sections 15162 and 15164, by preparing an addendum or subsequent environmental clearance to analyze the impacts from the modifications to or deletion of the mitigation measures. Any addendum or subsequent CEQA clearance shall explain why the mitigation measure is no longer needed, not feasible, or the other basis for modifying or deleting the project design feature or mitigation measure. Under this process, the modification or deletion of a mitigation measure shall not require a modification to any project discretionary approval unless the Director of Planning also finds that the change to the mitigation measures results in a substantial change to the Project or the non-environmental conditions of approval.

Chapter 1A of the City's Municipal Code incorporates environmental protection measures (EPMs) that are required to be implemented as part of the development standards for various Districts. These EPMs are part of the development standards for the Project Site. Several of these EPMs include the same requirements that are set forth in the mitigation measures within the Program EIR for the Housing Element Checklist. As these EPMs are already regulatory requirements for the Project, they are included in this MMP to confirm that the required measure will be implemented as part of the Project.

Mitigation Measure/Condition of Approval/and/or Environmental Protection Measure	Implementing Party	Enforcement and Monitoring Agency	Monitoring Phase and Monitoring Actions[a]
AIR QUALITY			
4.2-2(a) Construction Emissions Reduction For discretionary projects that meet the following criteria, prior to project approval, the Applicant shall be required to provide to the City an Air Quality Impact Analysis prepared by a qualified air quality analyst to analyze construction emissions and identify necessary mitigation: • Demolition of more than 13,500 square feet of building area; • Greater than 5,000 cubic yards of soil cut/fill; • Greater than 5-acres of graded area; or use of more than ten pieces of heavy-duty construction equipment and 150 truck trips (or a total of 6,000 vehicle miles traveled by truck) on any given day during demolition, site clearing, or grading. The Air Quality Impact Analysis shall demonstrate that project emissions are less than applicable SCAQMD regional and LST thresholds. • Off-road diesel-powered construction equipment greater than 50 horsepower shall be certified for either the Tier 4 Final emission standards for CARB In-Use Off-Road Diesel-Fueled Fleets Regulations or the USEPA Tier 4 emission standards, where available. **An analysis of potential construction-related air quality impacts has been completed in accordance with this mitigation measure (refer to Appendix D.1 of the Housing Element Checklist) and demonstrates that impacts would be less than significant with implementation of Tier 4 equipment. In addition, the Project will implement the following additional mitigation measures:** • All construction equipment shall be outfitted with BACT devices certified by CARB. Any emissions control device used by the contractor shall achieve emissions reductions that are no less than what could be achieved by a Level 3 diesel emissions control strategy for a similarly sized engine as defined by CARB regulations. • Vehicle idling shall be limited to five minutes as set forth in the California Code of Regulations, Title 13. Signs shall be posted in areas where they will be seen by vehicle operators stating idling time limits.	Applicant	Department of City Planning (DCP),	DCP Review of Air Quality Impact Analysis

Mitigation Measure/Condition of Approval/and/or Environmental Protection Measure	Implementing Party	Enforcement and Monitoring Agency	Monitoring Phase and Monitoring Actions[a]
• Heavy duty diesel-fueled equipment shall use low NOX diesel fuel to the extent that it is available and feasible to use. • Construction contractors shall utilize construction equipment that uses low polluting fuels (i.e., compressed natural gas, liquid petroleum gas, and unleaded gasoline) to the extent that they are available and feasible to use. • Construction contractors shall use electricity from power poles rather than temporary gasoline or diesel powered generators, as feasible, or solar where available. • Consistent with SCAQMD Rule 403, construction contractors shall identify and implement best available dust control measures during active construction operations capable of generating dust. • Construction contractors shall maintain construction equipment in good, properly tuned operating condition, as specified by the manufacturer, to minimize exhaust emissions. Documentation demonstrating that the equipment has been maintained in accordance with the manufacturer's specifications shall be kept on site and made available to LADBS inspectors during inspection. • Construction contractors shall reroute construction trucks away from congested streets or sensitive receptor areas, as feasible.			
4.2-2(b) Operations Emissions Reduction: For discretionary projects, prior to project approval, the Applicant shall be required to provide the City an Air Quality Impact Analysis prepared by a qualified air quality analyst to analyze operational emissions and identify necessary mitigation for any discretionary project that would include more than 462 single-family residential units, 612 multi-family residential units, or any equivalent combination thereof. The Air Quality Impact Analysis shall demonstrate that project emissions are less than applicable SCAQMD regional and LST thresholds and if impacts are found to be significant, mitigation measures shall be included. **This analysis has been completed (refer to Appendix D.1 of the Housing Element Checklist) and demonstrates that impacts would be less than significant. Thus, no mitigation measures are required.**	Applicant	DCP	DCP Review of Air Quality Impact Analysis

Mitigation Measure/Condition of Approval/and/or Environmental Protection Measure	Implementing Party	Enforcement and Monitoring Agency	Monitoring Phase and Monitoring Actions[a]
BIOLOGICAL RESOURCES			
4.3-2(b) Protected Tree and Tree Canopy Survey For discretionary projects that include the removal of trees, prior to project approval, a tree report and tree replanting plan shall be conducted by a certified arborist to tag and assess all trees (defined as woody plant material that is five inches or greater in diameter at breast height [DBH—four and a half feet off grade]) subject to the City's Protected Tree Ordinance on the project site. Trees shall be tagged to correspond with a tree exhibit map. Also, the genus and species of the trees, size of the trees at DBH, and structure and vigor of the trees shall be determined, and an evaluation of the trees' resource value (i.e., the biological impacts of the tree removals, potential to be considered wildlife habitat, and locating trees deserving protection) shall be completed. All protected trees shall receive a visual tree assessment (VTA—meaning tree observations shall be from the ground and that no special devices [e.g., increment borers, drills] shall be used). Following the completion of the tree survey, the arborist shall prepare a report that shall at a minimum provide a description of the general character of the trees on the site and identify opportunities and constraints for preservation. The report and tree replanting plan shall be provided to the City for review. As part of the assessment, a plot plan shall also be prepared indicating the location, type, and canopy coverage of all existing trees on the site and within the adjacent public right(s)-of-way. Further, removal or planting of any tree in the public right(s)-of-way requires approval of the Board of Public Works. All trees in the public right(s)-of-way shall conform to the current standards of the Department of Public Works, Urban Forestry Division, Bureau of Street Services. **A protected tree survey has been completed (refer to Appendix D.2 of the Housing Checklist) and demonstrates that no protected trees are located on the Project Site or within the adjacent public right-of-way. In addition, there are no other sensitive natural communities within the Project Site or Project vicinity. As such, the remaining mitigation measures included in the Program EIR regarding biological resources are not applicable to the Project.**	Applicant	DCP, Department of Public Works (DPW), Urban Forestry Division (UFD)	Review of protected tree survey by DCP. As part of plan approval, review and approval of tree report for removal or planting in public right-of-way, if such activity is proposed

Mitigation Measure/Condition of Approval/and/or Environmental Protection Measure	Implementing Party	Enforcement and Monitoring Agency	Monitoring Phase and Monitoring Actions[a]
CULTURAL RESOURCES			
4.4-1(a) Identification of Built-Environment Historical Resources For discretionary projects, the following procedures shall be implemented to identify historical resources, as defined by Public Resources Code Section 21084.1, located on or near a development site and implement appropriate techniques to avoid or reduce significant impacts to historical resources. The City of Los Angeles Historic Resources Survey (SurveyLA) results shall be consulted to determine whether the project area, or adjacent areas, have been subject to previous cultural resources studies and whether historical resources were identified. If a development involves the alteration or demolition of a property 45 years of age or older that was not evaluated in SurveyLA, including sites with a QQQ code, a historical resources evaluation shall be prepared for the development. The evaluation shall be prepared according to the following standards: • The evaluation shall be prepared by a qualified architectural historian or historian who meets the Secretary of the Interior's Professional Qualifications Standards (PQS) in architectural history or history. • The qualified architectural historian or historian shall conduct an intensive-level evaluation in accordance with the guidelines and best practices promulgated by the State Office of Historic Preservation (OHP) and the City of Los Angeles Office of Historic Resources (OHR) to identify any potential historical resources within the Area of Potential Effects. Those buildings and structures required to be assessed in a historical resource evaluation not located in an HPOZ shall be evaluated within their historic context and documented in a report meeting the OHP and OHR guidelines. All evaluated properties shall be documented on Department of Parks and Recreation Series 523 Forms. The report shall be submitted to the OHR for review and concurrence. If, as a result of the cultural resources records search or the subsequent historical resources evaluation, it is determined that the proposed development would result in a significant adverse effect to one or more historical resources, appropriate techniques consistent with the Secretary of Interior Standards to avoid or reduce significant impacts to the degree feasible shall be implemented. Measures to reduce impacts shall generally be overseen by a qualified architectural historian or historic architect	Applicant	DCP, Office of Historic Resources (OHR)	Prior to Approval of Project: review of historical resource evaluation by DCP

Mitigation Measure/Condition of Approval/and/or Environmental Protection Measure	Implementing Party	Enforcement and Monitoring Agency	Monitoring Phase and Monitoring Actions[a]
meeting the PQS, unless unnecessary under the circumstance (e.g., preservation in place). In conjunction with any development application that may affect the historical resource, a mitigation plan identifying measures for the treatment or protection of character-defining features shall be provided to the City for review. **An analysis of potential impacts associated with historical resources has been prepared (refer to Appendix D.3 of the Housing Element Checklist) and demonstrates that impacts to historical resources within the Project Site and outside of the Project Site would be less than significant. No additional mitigation measures are required.**			
4.4-2 Archaeological Resources Discretionary projects that involve ground disturbance in native soils or soils of unknown origin, shall implement the following procedures to identify archaeological resources located in a development site and implement applicable impact reduction techniques to reduce substantial adverse effects associated with the inadvertent discovery of archaeological resources. A. The project applicant shall retain a qualified archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards (PQS) in archaeology to complete a cultural resources assessment of the development site. A cultural resources assessment may include an archaeological pedestrian survey of the development site, if possible, and sufficient background archival research and field sampling to determine whether subsurface prehistoric or historic remains may be present. Archival research should include a records search conducted at the South Central Coastal Information Center (SCCIC) and a Sacred Lands File (SLF) search conducted with the Native American Heritage Commission (NAHC). **This portion of the mitigation measures has been completed. Refer to Appendix D.5 of the Housing Element Checklist for the Cultural Resources Report. In addition, the measures set forth in B through H, and K of this measure are substituted by the new substitute provisions in Section I below and Substitute Mitigation Measure SMM TCR-1, below.** SMM I. **[Substitute text that is more stringent than text from Program EIR]** Prior to issuance of a grading permit and prior to the start of any ground-disturbing activity, the applicant shall retain a qualified archaeologist who	Applicant	DCP, OHR	Prior to Project Approval: review of cultural resources assessment by DCP; obtain necessary assurances to ensure compliance Prior to Grading Permit: obtain necessary assurances to ensure compliance During All Ground Disturbing Activities: monitoring as required by cultural resources assessment; if archeological resources are uncovered, verify that a qualified archeologist evaluates and prepares a treatment plan; monitoring to ensure that construction in the area ceases until the treatment plan process is complete

Mitigation Measure/Condition of Approval/and/or Environmental Protection Measure	Implementing Party	Enforcement and Monitoring Agency	Monitoring Phase and Monitoring Actions[a]
meets the Secretary of the Interior's Professional Qualification Standards to oversee an archaeological monitor who shall be present during construction excavations, such as demolition, clearing/grubbing, grading, trenching, or any other construction excavation activity associated with the project, including peripheral activities, such as sidewalk replacement, utilities work, and landscaping, which may occur adjacent to the project site. The frequency of monitoring shall be based on the rate of excavation and grading activities, the materials being excavated (younger sediments vs. older sediments), the depth of excavation, and, if found, the abundance and type of archaeological resources encountered. Full-time monitoring may be reduced to part-time inspections, or ceased entirely, if determined adequate by the qualified archaeologist. Prior to commencement of excavation activities, Archaeological Sensitivity Training shall be given for construction personnel. The training session shall be carried out by the qualified archaeologist and shall focus on how to identify archaeological resources that may be encountered during earthmoving activities and the procedures to be followed in such an event. The details of the monitoring and training shall be summarized in an Archaeological and Tribal Cultural Resources Monitoring Plan (Monitoring Plan) prepared by the qualified archaeologist, in consultation with all interested Tribes, prior to the commencement of ground disturbing activities for the project. The Monitoring Plan shall include compliance with Section J, below and Mitigation Measure SMM-TCR-1, including the portions referring to the implementation of a Cultural Resources Monitoring Program (CRMP). The Monitoring Plan will provide details regarding the process for infield treatment of inadvertent discoveries of archaeological and tribal cultural resources and the disposition of inadvertently discovered non-funerary resources, and shall be consistent with the treatment of unique archaeological resources in PRC Section 21083.2. J. In the event that historic (e.g., bottles, foundations, refuse dumps/privies, railroads, etc.) or prehistoric (e.g., hearths, burials, stone tools, shell and faunal bone remains, etc.) archaeological resources are unearthed, ground-disturbing activities shall be halted or diverted away from the vicinity of the find so that the find can be evaluated. A 50-foot buffer within which construction activities shall not be allowed to continue shall be established by the qualified archaeologist around the find. Work shall be allowed to continue outside of the buffer area. All archaeological resources unearthed			

Mitigation Measure/Condition of Approval/and/or Environmental Protection Measure	Implementing Party	Enforcement and Monitoring Agency	Monitoring Phase and Monitoring Actions[a]
by project development activities shall be evaluated by the qualified archaeologist. If a resource is determined by the qualified archaeologist to constitute a "historical resource" pursuant to CEQA Guidelines Section 15064.5(a) or a "unique archaeological resource" pursuant to Public Resources Code Section 21083.2(g), the qualified archaeologist shall coordinate with the applicant and the City to develop a formal treatment plan that would serve to reduce impacts to the resources. The treatment plan established for the resources shall be in accordance with CEQA Guidelines Section 15064.5(f) for historical resources and Public Resources Code Sections 21083.2(b) for unique archaeological resources. Preservation in place (i.e., avoidance) is the preferred manner of treatment. If, in coordination with the City, it is determined that preservation in place is not feasible, appropriate treatment of the resource shall be developed by the qualified archaeologist in coordination with the City and may include implementation of archaeological data recovery excavations to remove the resource along with subsequent laboratory processing and analysis. Any archaeological material collected shall be curated at a public, non-profit institution with a research interest in the materials, if such an institution agrees to accept the material. If no institution accepts the archaeological material, they shall be donated to a local school, Tribe, or historical society in the area for educational purposes.			
GEOLOGY AND SOILS			
4.5-1(a) Paleontological Procedures for Discretionary Projects For all discretionary projects that involve excavation or grading activities at depths greater than previous disturbance on the respective site(s), prior to the start of construction, the following shall be conducted as discussed in detail below: prepare a resource assessment and records search for the presence of paleontological resources to determine if the project site is underlain by paleontological resources; monitor all excavation and grading activities in areas underlain by soils or geologic units potentially containing paleontological resources; and identify, record, and evaluate all paleontological resources uncovered during project construction and submit a paleontological assessment report to the City for review and approval. In addition, during project construction, the following shall be conducted as discussed in detail below: cease all construction activities in the event of the	Applicant	DCP, OHR, LADBS	Prior to Project Approval: review of the paleontological resource assessment and records search, Condition project to comply with monitoring plan and worker education plan

Mitigation Measure/Condition of Approval/and/or Environmental Protection Measure	Implementing Party	Enforcement and Monitoring Agency	Monitoring Phase and Monitoring Actions[a]
discovery of paleontological resources; conduct fossil recovery as necessary by a qualified paleontologist; avoid handling of paleontological resources by parties other than the qualified paleontologist responsible for conducting fossil recovery; and resume construction activities only upon clearance by the qualified paleontologist. These procedures, as detailed below, shall be implemented to avoid impacts to paleontological resources or reduce potential impacts to a less-than- significant level: • Prior to excavation and grading activities, a qualified paleontologist shall prepare a resource assessment and records search for the potential presence of paleontological resources. This assessment shall be informed by records from the Natural History Museum of Los Angeles County. • If the assessment determines the project site is underlain by soils or geologic units with a medium to high potential for containing paleontological resources, a qualified paleontologist shall prepare a monitoring plan, and worker education plan. The paleontologist's assessment and any required monitoring or required worker education plan shall be submitted to the City for review and approval prior to the commencement of construction activities. Any monitoring plan shall include requiring compliance with Mitigation Measure 4.5-1(d) for discovery, salvage and treatment. **The portion of this mitigation measure requiring preparation of a paleontological resources assessment has been completed. Refer to Appendix D.6 of the Housing Element Checklist for the Paleontological Resources Assessment.**			
4.5-1(b) Worker Environmental Awareness Program, Fossil Salvage, and Construction Monitoring: If required by cultural resources assessment under MM 4.5-1(a), prior to the start of construction, a paleontological monitor shall conduct training for construction personnel regarding the appearance of fossils and the procedures for notifying paleontological staff should fossils be discovered by construction staff, and notice that the identified qualified paleontologist is the only one authorized to handle paleontological find(s), including but not limited to collection and removal. Approved plans shall include statement of WEAP requirement.	Applicant	DCP, OHR	Prior to Grading Permits: obtain necessary assurances to ensure WEAP plan requirement are met; ensure plans show WEAP requirement

Mitigation Measure/Condition of Approval/and/or Environmental Protection Measure	Implementing Party	Enforcement and Monitoring Agency	Monitoring Phase and Monitoring Actions[a]
4.5-1(c) Construction Monitoring If required pursuant to a monitoring plan prepared under MM 4.5-1(a), a paleontologist or designated paleontological monitor shall monitor ground disturbance activities, including the initial five feet below the ground surface, as areas with high paleontological sensitivity may contain resources at shallow depths and within the first five feet. If the paleontological monitor determines that full-time monitoring is no longer warranted, he or she may recommend that monitoring be reduced to periodic spot-checking or cease entirely. Monitoring shall be reinstated if any new or unforeseen deeper ground disturbances are required. After ground disturbing activities are completed, the paleontologist or designated monitor shall complete and submit a report to the City verifying compliance with the monitoring plan. Monitoring plan shall show on the plans.	Applicant	DCP, OHR	Prior to Grading Permits: obtain necessary assurances to ensure monitoring plan compliance, including compliance with mitigation measure 4.5-1(d) for discovery, salvage and treatment; ensure plans show monitoring plan requirements Prior to Building Permit: obtain verification report
4.5-1(d) Fossil Discovery, Salvage, and Treatment All discretionary projects shall be subject to the following mitigation measure: Discovery. If paleontological resources are uncovered during construction activities (in either a previously disturbed or undisturbed area), all ground-disturbing activities in the area of the find shall cease until a qualified paleontologist has evaluated the find, and identified and prepared an appropriate mitigation plan, in accordance with federal, state, and local guidelines, Construction activities in the area of the discovery shall commence again only after the identified resource(s) are properly processed by a qualified paleontologist, and if construction activities are cleared by the qualified paleontologist to continue. If cleared by the qualified paleontologist, construction activity may continue unimpeded on other portions of the project site that would not affect evaluation or recovery of the identified resource(s). Fossil Salvage and Treatment. The qualified paleontologist or designated paleontological monitor shall recover intact fossils consistent with the mitigation plan and notify the City of any fossil salvage and recovery efforts. Typically, fossils can be safely salvaged quickly by a single paleontologist and not disrupt construction activity. In some cases, larger fossils (such as complete skeletons or large mammal fossils) require more extensive excavation and longer salvage periods. In this case the paleontologist shall have the authority to temporarily direct, divert or halt construction activity to ensure that the fossil(s) can be removed in a safe and timely manner. Any fossils shall be handled and deposited consistent with a mitigation plan	Applicant	DCP, OHR	Prior to Project Approval: condition project to comply with requirement and obtain necessary assurances to ensure compliance Prior to Grading Permit: verify site plan shows requirement and obtain necessary assurances

Mitigation Measure/Condition of Approval/and/or Environmental Protection Measure	Implementing Party	Enforcement and Monitoring Agency	Monitoring Phase and Monitoring Actions[a]
prepared by the paleontological monitor. The qualified paleontologist shall prepare a report according to current professional standards including those of the SVP that describes the resource, how it was assessed, and disposition. The report shall be submitted to the City. The requirements in this mitigation measure shall be shown on plans.			
HAZARDS AND HAZARDOUS MATERIALS –			
4.7-2(a) Environmental Site Assessment [This measure is required to be implemented as part of EPM HM1-2 of the EPM Handbook included as Chapter 1A of the Zoning Code.] (1) Applicability Threshold. Discretionary projects that require grading, excavation, or building permit from LADBS and which meet the criteria below shall comply with the standard in (2): • Located on or within 500 feet of a Hazardous Material site listed on the following databases: – SWRCB GeoTracker (refer to https://geotracker.waterboards.ca.gov); – DTSC EnviroStor (refer to https://www.envirostor.dtsc.ca.gov/public); – DTSC Hazardous Waste Tracking System (refer to https://hwts.dtsc.ca.gov); – LAFD Certified Unified Program Agency (refer to the active, inactive, and historical inventory lists at https://www.lafd.org/fire-prevention/cupa/public-records); – Los Angeles County Fire Department Health Hazardous Materials Division (refer to the active and inactive facilities, site mitigation, and California Accidental Release Prevention inventory lists at https://fire.lacounty.gov/public-records- requests); – SCAQMD Facility Information Detail (refer to https://xappprod.aqmd.gov/find); or • Located on or within 500 feet of a Hazardous Materials site designated as a RCRA Small Quantity Generator or Large Quantity Generator (refer to the USEPA Envirofacts database at https://enviro.epa.gov/index.html); or • Located on an Oil Drilling District or located on or within 50 feet of a property identified as having an oil well or an oil field (active or inactive)	Applicant	DCP, LADBS,	Phase I and Phase II prepared by technical expert to be reviewed by DCP

Mitigation Measure/Condition of Approval/and/or Environmental Protection Measure	Implementing Party	Enforcement and Monitoring Agency	Monitoring Phase and Monitoring Actions[a]
by CalGEM (refer to https://www.conservation.ca.gov/calgem/Pages/WellFinder.aspx); or • Located on any land currently or previously designated with an industrial use class or industrial zoning; or • Located on land currently or previously used for a gas station or dry-cleaning facility. Or: • The Applicant or Owner are aware or have reason to be aware that the Project site was previously used for an industrial use, gas station, or dry-cleaner, or otherwise is contaminated with hazardous substances. And: • The site has not been previously remediated to the satisfaction of the relevant regulatory agency/agencies for any contamination associated with the above uses or conditions. (2) A Phase I Environmental Site Assessment (ESA) shall be prepared by a Qualified Environmental Professional in accordance with State standards/guidelines and current professional standards, including the American Society for Testing and Materials (ASTM) Standard Practice for Environmental Site Assessments, to evaluate whether the site, or the surrounding area, is contaminated with hazardous substances from any past or current land uses, including contamination related to the storage, transport, generation, or disposal of toxic or Hazardous Waste or materials. If the Phase I ESA identifies a Recognized Environmental Condition (REC) and/or if recommended in the Phase I ESA, a Phase II ESA shall also be prepared by a Qualified Environmental Professional. The Phase I and/or Phase II ESAs shall be maintained by the Applicant and Owner and made available for review and inclusion in the case file, as applicable, by the appropriate regulatory agency, such as the SWRCB, DTSC, or LAFD Hazard Mitigation Program. Any remediation plan recommended in the Phase II ESA or by the appropriate regulatory agency shall be implemented and, if required, a No Further Action letter shall be issued by the appropriate regulatory agency prior to issuance of any permit from LADBS, unless the regulating agency determines that remedial action can be implemented in conjunction with excavation and/or grading. If oversight or approval by a regulatory agency is			

Mitigation Measure/Condition of Approval/and/or Environmental Protection Measure	Implementing Party	Enforcement and Monitoring Agency	Monitoring Phase and Monitoring Actions[a]
not required, the Qualified Environmental Professional shall provide written verification of compliance with and completion of the remediation plan, such that the site meets the applicable standards for the proposed use, which shall be maintained by the Applicant and Owner. **In accordance with this EPM, a Phase I and Phase II have been prepared and are included in Appendix D.7 of the Housing Element Checklist.**			
4.7-2(b) Site Remediation and Health and Safety Plan For discretionary projects that require site remediation under MM-HAZ 4.7-2a, if contaminants of concern (COCs) are detected above regulatory action levels, the project applicant shall retain a qualified environmental consultant to prepare a Soil Management Plan (SMP). If the project is under regulatory oversight, the SMP shall be submitted to appropriate agencies (such as SCAQMD, DTSC or others) for review and approval prior to the commencement of excavation and grading activities. The SMP shall be implemented during excavation and grading activities associated with the project to ensure that contaminated soils are properly identified, excavated, and disposed of off-site, as follows: • The SMP shall be prepared and executed in accordance with South Coast Air Quality Management District (SCAQMD) Rule 1166, Volatile Organic Compound Emissions from Decontamination of Soil. The SMP shall require the timely testing and sampling of soils so that contaminated soils can be separated from inert soils for proper disposal. The SMP shall specify the testing parameters and sampling frequency. During excavation, Rule 1166 requires that soils identified as contaminated shall be sprayed with water or another approved vapor suppressant or covered with sheeting during periods of inactivity of greater than an hour, to prevent contaminated soils from becoming airborne. Under Rule 1166, contaminated soils shall be transported from the Project Site by a licensed transporter and disposed of at a licensed storage/treatment facility to prevent contaminated soils from becoming airborne or otherwise released into the environment. • During the project's excavation phase, the applicant shall remove and properly dispose of impacted materials in accordance with the provisions of the SMP. If soil is stockpiled prior to disposal, it will be managed in accordance with the Project's Storm Water Pollution Prevention Plan, prior to its transfer for treatment and/or disposal. All impacted soils would	Applicant	DCP, LADBS	Prior to Issuance of Grading Permit: review and approve the Soil Management Plan Prior to Issuance of Building Permit: review and approve the Health and Safety plan

Mitigation Measure/Condition of Approval/and/or Environmental Protection Measure	Implementing Party	Enforcement and Monitoring Agency	Monitoring Phase and Monitoring Actions[a]
be properly treated and disposed of in accordance with SCAQMD Rule 1166. • The project applicant shall commission a site-specific Health and Safety Plan (HASP) to be prepared in compliance with Occupational Safety and Health Administration (OSHA) Safety and Health Standards (29 Code of Federal Regulations 1910.120) and Cal-OSHA requirements (CCR Title 8, General Industry Safety Orders and California Labor Code, Division 5, Part 1, Sections 6300-6719) and submitted for review by the Department of Building and Safety. The HASP shall address, as appropriate, safety requirements that will serve to avoid significant impacts or risks to workers or the public. The HASP shall include emergency contact numbers, maps to the nearest hospital, gas monitoring action levels, gas response actions, allowable worker exposure times, and mandatory personal protective equipment requirements. The HASP shall be signed by all workers involved in the activities associated with the investigation to demonstrate their understanding of the risks of excavation. If remediation is determined to be necessary, the grading permit shall not be issued until the applicable regulatory agency has indicated that further remedial action is not required. **In accordance with this Mitigation Measure, a Soil Management Plan and a Health and Safety Plan have been prepared and are included within Appendix D.7 of the Housing Element Checklist.**			
Implementing Mitigation Measure 4.7-2(c) Vapor Intrusion: The Project shall implement a vapor intrusion mitigation system (VIMS) to address potential soil vapor intrusion into residential structures.	Applicant	LADBS	Prior to Issuance of Building Permit: review and approve plan for VIMS system Prior to Issuance of Certificate of Occupancy: confirm operation of VIMS system
NOISE			
4.10-1(a) Noise Shielding and Silencing [This measure is required to be implemented as part of EPM NV1-1 of the EPM Handbook included as Chapter 1A of the Zoning Code.]	Applicant	DCP, LADBS	Prior to Building Permits (including grading, demolition): ensure that requirement shows on plans

Mitigation Measure/Condition of Approval/and/or Environmental Protection Measure	Implementing Party	Enforcement and Monitoring Agency	Monitoring Phase and Monitoring Actions[a]
For all discretionary projects, power construction equipment (including combustion engines), fixed or mobile, shall be equipped with noise shielding and silencing devices consistent with manufacturer's standards or the Best Available Control Technology. Equipment shall be properly maintained, and the Project Applicant or Owner shall require any construction contractor to keep documentation on-site during any earthwork or construction activities demonstrating that the equipment has been maintained in accordance with manufacturer's specifications. Measure shall be shown on plans.			and necessary assurances are obtained During Construction: field verify that power construction equipment includes noise shielding and silencing devices
4.10-1(b) Use of Driven Pile Systems [This measure is required to be implemented as part of EPM NV1-2 of the EPM Handbook included as Chapter 1A of the Zoning Code.] For all discretionary projects, driven (impact), sonic, or vibratory pile drivers shall not be used, except in locations where the underlying geology renders alternative methods infeasible, as determined by a soils or geotechnical engineer and documented in a soils report. Requirement shall show on plans.	Applicant	DCP, LADBS	Prior to Grading Permits: ensure that requirement shows on plans and necessary assurances have been obtained. During Construction: field verify that driven, sonic or vibratory pile drivers are avoided
4.10-1(c) Enclosures and Screening [This measure is required to be implemented as part of EPM NV1-3 of the EPM Handbook included as Chapter 1A of the Zoning Code.] For all discretionary projects, all outdoor mechanical equipment shall be enclosed or screened from off-site noise-sensitive uses. The equipment enclosure or screen shall be impermeable (i.e., solid material with minimum weight of 2 pounds per square feet) and break the line-of-sight from the equipment and off-site noise-sensitive uses.	Applicant	DCP, LADBS	Prior to Project Approval: condition project to comply with measures Prior to Building Permits: ensure mechanical equipment is enclosed or screened During Construction: field verify that all outdoor mechanical equipment are screened or enclosed
4.10-1(d) Construction Staging Areas [This measure is required to be implemented as part of EPM NV1-4 of the EPM Handbook included as Chapter 1A of the Zoning Code.] Construction staging areas shall be located as far from noise-sensitive uses as reasonably possible and feasible in consideration of site boundaries,	Applicant	DCP, LADBS	Prior to Project Approval: condition project to comply with measures and to provide necessary assurances to ensure compliance

Mitigation Measure/Condition of Approval/and/or Environmental Protection Measure	Implementing Party	Enforcement and Monitoring Agency	Monitoring Phase and Monitoring Actions[a]
topography, intervening roads and uses, and operational constraints. Requirement shall show on plans.			Prior to Building Permits (including grading, demolition): ensure that requirement shows on plans and necessary assurances are obtained During Construction: field verify that construction staging areas are located far from noise sensitive uses when possible and feasible.
4.10-1(e) Temporary Sound Barriers [This measure is required to be implemented as part of EPM NV1-5 of the EPM Handbook included as Chapter 1A of the Zoning Code.] Sound barriers, such as temporary walls or sound blankets, shall be erected between construction activities and noise-sensitive uses when construction activities are located within a line-of-sight to and within 500 feet of noise-sensitive uses. Requirement shall show on plans.	Applicant	DCP, LADBS	Prior to Project Approval: condition project to comply with measures and to provide necessary assurances to ensure compliance Prior to Building Permits (including grading, demolition): ensure that requirement shows on plans and necessary assurances are obtained During Construction: field verify that sound barriers between construction activities and noise- sensitive uses are provided
4.10-1(f) Project-Specific Construction Noise Study [This measure is required to be implemented as part of EPM NV1-6 of the EPM Handbook included as Chapter 1A of the Zoning Code.] A Construction Noise Study, prepared by a qualified noise expert to meet the requirements herein, shall be required for discretionary projects in the City located within 500 feet of noise-sensitive land uses and that have one or more of the following characteristics:	Applicant	DCP, LADBS	Prior to Project Approval: Preview of Construction Noise Study identifying any required mitigation; condition project to comply with noise reduction measures in the Study and provide necessary

Mitigation Measure/Condition of Approval/and/or Environmental Protection Measure	Implementing Party	Enforcement and Monitoring Agency	Monitoring Phase and Monitoring Actions[a]
• Two or more subterranean levels or 20,000 cubic yards or more of excavated material; • Construction duration (excluding architectural coatings) of 18 months or more; • Use of large, heavy-duty equipment rated 300 horsepower or greater; or • The potential for impact pile driving. The Construction Noise Study shall characterize sources of construction noise, quantify noise levels at noise-sensitive uses (e.g., residences, transient lodgings, schools, libraries, churches [or other places of assembly], hospitals, nursing homes, auditoriums, concert halls, amphitheaters, playgrounds, and parks), and identify measures to reduce noise exposure. The Construction Noise Study shall identify reasonably available noise reduction devices or techniques to reduce noise levels to acceptable levels and/or durations including through reliance on any relevant federal, state or local standards or guidelines or accepted industry practices, and in compliance with LAMC standards. Noise reduction devices or techniques may include but not be limited to mufflers, shields, sound barriers, and time and place restrictions on equipment and activities. Each measure in the Construction Noise Study shall identify anticipated noise reductions at noise- sensitive land uses. Project Applicants shall be required to comply with all requirements of Mitigation Measures 4.10-1(a) through 4.10-5(e) in addition to any additional requirements identified and recommended by the Construction Noise Study and shall maintain proof that notice of, as well as compliance with, the identified measures have been included in contractor agreements. **[In accordance with this measure, a construction noise evaluation has been completed and is included in Appendix D.4 of the Housing Checklist.]**			assurances to ensure compliance Prior to Issuance of Building Permit: obtain necessary assurances for compliance with noise reducing measures During Construction: field verify that compliance with mitigation plan from Construction Noise Study
4.10-2 Project-Specific Operational Noise Study A Noise Study, prepared by a qualified noise expert to meet the requirements herein, shall be required for all discretionary housing developments with roof decks and/or pool decks in the City of Los Angeles concurrent with Design	Applicant	DCP, LADBS	Prior to Project Approval: DCP review the Noise Study, condition compliance with any mitigation measures and providing necessary

Mitigation Measure/Condition of Approval/and/or Environmental Protection Measure	Implementing Party	Enforcement and Monitoring Agency	Monitoring Phase and Monitoring Actions[a]
Review and prior to the approval of building permits. The Noise Study shall include: • Description of pertinent noise regulations. • Analysis of operational noise generated by the project's roof decks and/or pool decks to noise-sensitive land uses. • Comparison of noise levels to applicable City thresholds, such as if the project's operational noise would exceed 3 dBA in an unacceptable land use category or 5 dBA in an acceptable land use category per the City's land use compatibility guidelines included in the City of Los Angeles General Plan Noise Element. • If project noise would exceed City thresholds, identification of mitigation measures to reduce noise to below 3 dBA in an unacceptable land use category or 5 dBA in an acceptable land use category to the extent feasible. Mitigation measures may include, but would not be limited to, operational restrictions, sound dampening equipment, or sound walls. • Each mitigation measure in the Noise Study shall identify anticipated noise reductions at noise-sensitive land uses. • Applicant/owners shall comply with the mitigation plan and include the measures in construction contracts. • Mitigation plan shall be included on plans. **[In accordance with this Mitigation Measure, a construction noise evaluation has been completed and is included in Appendix D.4 of the Housing Checklist.]**			assurances to ensure compliance Prior to Building Permits: ensure mitigation measures are on plans and obtain necessary assurances
4.10-3(a) Vibration Control Plan For construction activity for discretionary projects involving vibratory rollers or sonic pile drivers within 50 feet of an extremely fragile building (non-engineered masonry) or historical resource (designated or in SurveyLA or other City recognized survey), the Applicant shall prepare a Vibration Control Plan. The Vibration Control Plan requirement shall also apply to use of impact pile drivers within 140 feet of extremely fragile buildings or historical resources or residential structures. The Vibration Control Plan shall be prepared by a licensed structural engineer and shall include methods to minimize vibration, including, but not limited to:	Applicant	DCP, LADBS	Prior to Project Approval or Grading Permit: submittal of Vibration Control Plan or condition project to prepare Vibration Control Plan and provide necessary assurances to ensure compliance Prior to Issuance of Grading Permit: review and approve the Vibration Control Plan

Mitigation Measure/Condition of Approval/and/or Environmental Protection Measure	Implementing Party	Enforcement and Monitoring Agency	Monitoring Phase and Monitoring Actions[a]
• Use of drilled piles or similar method rather than impact pile driving • Use of rubber-tired equipment rather than metal-tracked equipment • Avoiding the use of vibrating equipment when allowed by best engineering practices The Vibration Control Plan shall include a pre-construction survey letter establishing baseline conditions at potentially affected extremely fragile buildings/historical resources. The survey letter shall provide a shoring design to protect the extremely fragile buildings/historical resources from potential damage. At the conclusion of vibration causing activities, the qualified structural engineer shall issue a follow-up letter describing damage, if any, to impacted buildings. The letter shall include recommendations for any repair, as may be necessary, in conformance with the Secretary of the Interior Standards. Repairs shall be undertaken and completed by the Contractor and monitored by a qualified structural engineer in conformance with all applicable codes including the California Historical Building Code (Part 8 of Title 24). A Statement of Compliance, in a form approved by the City, committing the Applicant and Owner to complying with the measure shall be signed by the Applicant and Owner is required to be submitted to the Los Angeles Department of Building and Safety (LADBS) at plan check and prior to the issuance of any permit. The Vibration Control Plan, prepared as outlined above shall be documented by a qualified structural engineer, and shall be provided to the City upon request. Vibration Control Plan shall show on the plans.			and/or obtain necessary assurances; Vibration Control Plan showing on the plans
4.10-3(b) Vibration Mitigation For all discretionary projects: • Impact pile drivers shall be avoided to eliminate excessive vibration levels. Drilled piles or similar methods are alternatives that shall be utilized where geological conditions permit their use. • Construction activities shall involve rubber-tired equipment rather than metal- tracked equipment. The construction contractor shall manage construction phasing (scheduling demolition, earthmoving, and ground-impacting operations so as not to occur in the same time period), use low-impact construction technologies, and shall	Applicant	DCP, LADBS	Prior to Project Approval: condition project to comply with measures and to provide necessary assurances to ensure compliance Prior to Building Permits (including grading, demolition): ensure that requirement shows on plans and necessary assurances are obtained

Mitigation Measure/Condition of Approval/and/or Environmental Protection Measure	Implementing Party	Enforcement and Monitoring Agency	Monitoring Phase and Monitoring Actions[a]
avoid the use of vibrating equipment when allowed by best engineering practices. Requirement to be on plans.			During Construction: verify that vibrating equipment is avoided
PUBLIC SERVICES			
4.12-2(a) Crime Prevention Unit Consultation For a discretionary project with more than 300 units or on a project site of more than 10 acres, the project applicant shall consult with the Los Angeles Police Department's Crime Prevention Unit regarding the incorporation of crime prevention features appropriate for the design of the project, including applicable features in the Los Angeles Police Department's Design Out Crime Guidelines. The crime prevention features recommended by the Los Angeles Police Department's Crime Prevention Unit and agreed to by the project applicant during consultation shall be made part of the project. The plans shall incorporate the design guidelines relative to security, semipublic and private spaces, which may include but not be limited to access control to building, secured parking facilities, walls/fences with key systems, well-illuminated public and semi-public space designed with a minimum of dead space to eliminate areas of concealment, location of toilet facilities or building entrances in high-foot traffic areas, and provision of security guard patrol throughout the project site if needed. These measures shall be approved by the Police Department prior to the issuance of building permits.	Applicant	LADBS, Los Angeles Police Department (LAPD)	Prior to Project Approval: require applicant to consult with police department and condition project to comply with crime prevention features recommended by LAPD; or condition project applicant to consult with LAPD prior to building permits and provide necessary assurances to ensure compliance Prior to Issuance of Building Permit: review project and provide consultation for crime prevention measures; obtain assurances
4.12-2(b) Security During Construction During construction of discretionary projects with more than 300 units or with more than 10 acres, private security personnel shall monitor vehicle and pedestrian access to the construction areas and patrol the project site, construction fencing with gated and locked entry shall be installed around the perimeter of the construction site, and security lighting shall be provided in and around the construction site. Furthermore, temporary construction fencing shall be placed along the periphery of the active construction areas to screen as much of the construction activity from view at the local street level and to keep unpermitted persons from entering the construction area. Low-level security lighting, and locked entry (e.g., padlock gates or guard-restricted access) shall be provided to limit access by the general public. Regular security patrols during non-	Applicant	DCP; LADOT; LADBS	Prior to project Approval: review and approve construction management plan or condition project to provide construction management plan and provide necessary assurances to ensure compliance Prior to Issuance of Building Permit: review and approve Construction Management

Mitigation Measure/Condition of Approval/and/or Environmental Protection Measure	Implementing Party	Enforcement and Monitoring Agency	Monitoring Phase and Monitoring Actions[a]
construction hours shall also be provided. During construction activities, the contractor shall document the security measures; and the documentation shall be made available to the construction monitor.			Plan; obtain necessary assurances
TRANSPORTATION			
4.14-1 Construction Management Plan Any discretionary project that LADOT determines will have potential impacts to the circulation system even with application of existing regulatory compliance measures, shall prepare a detailed Construction Management Plan (CMP), including street closure information, detour plans, haul routes, and staging plans shall be prepared and submitted to LADOT for review and approval. The Construction Management Plan will formalize how construction would be carried out and identify specific actions that would be required to reduce effects on the surrounding community. The Construction Management Plan shall be based on the nature and timing of the specific construction activities and other projects in the vicinity of the Project Site, and shall include those elements required by LADOT for the project, which may include but are not limited to the following: • Providing for temporary traffic control during all construction activities adjacent to public right of way to improve traffic flow on public roadways (e.g., flag men) • Prohibition of construction worker parking on any adjacent residential streets • Encouragement of carpool/vanpool of workers • Prohibitions on construction-related vehicles parking on surrounding public streets • Prohibitions on construction equipment or material deliveries within the public right- of-way • Accommodation of all equipment on site as feasible • Provisions for temporary traffic control during all construction activities adjacent to public right-of-way to improve traffic flow on public roadways (e.g., flag men) • Scheduling of construction activities, including deliveries, to reduce the effect on peak hour traffic flow on surrounding arterial streets	Applicant	DCP; LADOT; LADBS	Prior to Project Approval: review and approve construction management plan or condition project to provide construction management plan and provide necessary assurances to ensure compliance Prior to Issuance of Building Permit: review and approve Construction Management Plan; obtain necessary assurances

Mitigation Measure/Condition of Approval/and/or Environmental Protection Measure	Implementing Party	Enforcement and Monitoring Agency	Monitoring Phase and Monitoring Actions[a]
• Rerouting of construction trucks to reduce travel on congested streets to the extent feasible • Provisions of safety precautions for pedestrians and bicyclists through alternate routing and protection barriers and signage • Provisions to accommodate the staging and storage of equipment • Scheduling of construction-related deliveries to reduce travel during commuter peak hours • Obtain necessary permits for any truck hauling from the City prior to issuance of any permit for the project. • Noticing and coordination with any nearby schools that may be affected by construction activities, including deliveries, hauling and other construction transportation, to ensure safety of school children. • Ensuring all feasible safety measures are taken to accommodate safe travel of pedestrian, bicyclists, and other users of the sidewalks around the construction site, including but not limited through the following measures: – Construction staging as to maintain pedestrian access on adjacent sidewalks throughout all construction phases. – Maintaining adequate and safe pedestrian protection, including physical separation (including utilization of barriers such as K-Rails or scaffolding, etc.) from work space and vehicular traffic and overhead protection, due to sidewalk closure or blockage, at all times. – Providing temporary pedestrian facilities adjacent to the Project Site and provide safe, accessible routes that replicate as nearly as practical the most desirable characteristics of the existing facility. – Covered walkways shall be provided where pedestrians are exposed to potential injury from falling objects. – Keeping sidewalk open during construction until only when it is absolutely required to close or block sidewalk for construction staging. – Reopening the sidewalk as soon as reasonably feasible taking construction and construction staging into account.			

Mitigation Measure/Condition of Approval/and/or Environmental Protection Measure	Implementing Party	Enforcement and Monitoring Agency	Monitoring Phase and Monitoring Actions[a]
TRIBAL CULTURAL RESOURCES			
4.15-1(a) Native American Consultation and Monitoring for Discretionary Projects All discretionary projects that involve ground disturbing activities in previously undisturbed soils, shall prepare a cultural resources assessment and do a record search with a study area of no less than 0.5 mile around the project area. Projects conducted in culturally and historically sensitive areas, as determined by a Qualified Archaeologist meeting the Secretary of the Interior's Professional Qualification Standards for Archaeologist, should include a record search with a study area of no less than 1 mile around the project area. Notification shall be provided to California Native American tribes that are traditionally and culturally affiliated with the geographic area of the project site and have submitted a written request to the Department of City Planning to be notified of proposed projects in that area. Should projects have potential to impact cultural resources, as determined during the environmental assessment or Tribal consultation, a Cultural Resources Monitoring Program (CRMP) shall be prepared by Qualified Archaeologist, in consultation with all interested Tribes, prior to the commencement of any and all ground- disturbing activities for the Project, including any archaeological testing. The CRMP shall include compliance with 4.15-1(b) and will provide details regarding the process for in- field treatment of inadvertent discoveries and the disposition of inadvertently discovered non-funerary resources and shall be consistent with the treatment of unique archaeological resources in PRC 21083.2.	Applicant	DCP, LADBS	Prior to Project Approval: DCP review cultural resource assessment report and verify that notification to applicable tribes is provided; review and approve the Cultural Resources Monitoring program; condition project to comply with monitoring program and to provide adequate assurances to ensure compliance
Mitigation Measure 4.15-1(b) Discovery of Potential Tribal Cultural Resources is substituted with SMM TRA-1, below, and will be implemented in conjunction with Section J of Mitigation Measure 4.4-2, above. **Mitigation Measure SMM TCR-1:** Prior to commencing any Ground Disturbance Activities at the Project Site, the Applicant, or its successor, shall retain a qualified tribal monitor from the Gabrieleño Band of Mission Indians—Kizh Nation (Tribe). Ground Disturbance Activities shall include demolition, excavating, digging, trenching, plowing, drilling, tunneling, quarrying, grading, leveling, clearing, driving posts, augering, backfilling, blasting, stripping topsoil, potholing, pavement removal, grubbing, tree removals, boring or a similar activity at the project site. Prior to the commencement of any Ground Disturbance Activities, the Applicant and the Tribe shall execute an agreement	Applicant	DCP, LADBS	Prior to Project Approval: condition project to comply with measure and provide assurance to ensure compliance Prior to Building Permit: obtain necessary assurances: ensure measure shown on plans During Project Activities: if resources are found, field

Mitigation Measure/Condition of Approval/and/or Environmental Protection Measure	Implementing Party	Enforcement and Monitoring Agency	Monitoring Phase and Monitoring Actions[a]
for a tribal monitor at a reasonable rate, determined in good faith, consistent with industry standards, taking into account factors such as the scope and duration of the Project and substantial evidence for the presence or absence of tribal cultural resources. If the terms of service cannot be agreed upon, or if no response is received within 10 days of soliciting a request, the Applicant may contact another California Native American tribe included on the Native American Heritage Commission's Tribal Contact List and request the services of a tribal monitor. Prior to commencing any Ground Disturbance Activities, the tribal monitor, shall provide Worker Environmental Awareness Program (WEAP) training to construction crews involved in Ground Disturbance Activities that includes information on regulatory requirements for the protection of tribal cultural resources. As part of the WEAP training, construction crews shall be briefed on proper procedures to follow should a crew member discover tribal cultural resources during Ground Disturbance Activities. In addition, workers will be shown examples of the types of resources that would require notifying the tribal monitor. The Applicant shall maintain on the Project Site, for potential City inspection, documentation establishing the WEAP training was completed for all members of the construction crew involved in Ground Disturbance Activities. The tribal monitor shall observe Ground Disturbance Activities on the Project Site when they are taking place in sediments capable of containing tribal cultural resources, as determined by a Qualified Archaeologist in consultation with the Tribe and supported by substantial evidence. The tribal monitor(s) will complete daily monitoring logs that will provide descriptions and locations of the relevant Ground Disturbing Activities, the type of construction activities performed, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor logs will identify and describe any discovered tribal cultural resources as defined in California Public Resources Code Section 21074. Copies of monitor logs will be provided to the project applicant and/or the City upon request to the Tribe(s). The tribal monitoring shall end when either 1) confirmation is received from the Applicant, in writing, that all scheduled activities pertaining to tribal monitoring and all Ground Disturbance Activities are completed; or 2) the Tribe(s) provides a determination, in writing and supported by substantial evidence, that no future, planned construction activity, and/or			verify that all work within a 50-foot buffer is ceased; verify that affiliated tribal representatives are notified; verify that the identified resources are properly assessed and processed by a Tribal Representative or, if no Tribal Representative is identified, a Qualified Archaeologist can be consulted

Mitigation Measure/Condition of Approval/and/or Environmental Protection Measure	Implementing Party	Enforcement and Monitoring Agency	Monitoring Phase and Monitoring Actions[a]
development/construction phase at the project site possesses the potential to impact any tribal cultural resources. In the event that any objects or artifacts that may be tribal cultural resources are encountered during the course of any Ground Disturbance Activities, all such activities shall temporarily cease within the area of discovery, the radius of which shall be 50 feet or otherwise determined by the Qualified Archaeologist in consultation with the tribal monitor, until the potential tribal cultural resource is properly assessed and addressed pursuant to the process set forth below: 1. If the Qualified Archaeologist and Tribe determine the resources are Native American in origin, the Tribe will recommend steps for treatment of all discovered tribal cultural resources in the form and/or manner the Tribe deems appropriate, in the Tribe's reasonable discretion, and for any purpose the Tribe deems appropriate, including for educational, cultural and/or historic purposes. 2. The Applicant shall implement the Tribe's recommendations if the Qualified Archaeologist concludes that the Tribe's recommendations are reasonable and feasible. In addition to any recommendations from the Tribe(s), the Qualified Archaeologist shall develop a list of actions that shall be taken to avoid or minimize impacts to the identified tribal cultural resources substantially in compliance with any applicable federal, state or local law, rule or regulation, including but not limited to Public Resources Code Section 21083.2. 3. Ground Disturbance Activities may recommence outside of the specified radius of the discovery site, so long as this radius has been reviewed by both the archaeological monitor and tribal monitor(s) and determined to be reasonable and appropriate, and so long as the Applicant has complied with all of the recommendations developed and approved pursuant to the process set forth in Paragraphs 1 and 2 above. 4. Copies of any subsequent archaeological study, tribal cultural resources study or report, detailing the nature of any significant tribal cultural resources, remedial actions taken, and disposition of any significant tribal cultural resources shall be submitted to the South Central Coastal Information Center at California State University, Fullerton and to the Native American Heritage Commission for inclusion in its Sacred Lands File.			

Mitigation Measure/Condition of Approval/and/or Environmental Protection Measure	Implementing Party	Enforcement and Monitoring Agency	Monitoring Phase and Monitoring Actions[a]
5. Notwithstanding Paragraph 4 above, any information that Los Angeles Department of City Planning, in consultation with the Los Angeles City Attorney's Office, determines to be confidential in nature shall not be published under the applicable provisions of the Government Code Sections 7929.000 and 7929.005, and subdivision (d) of Section 15120 of Title 14 of the California Code of Regulations.			
6. Archaeological and Native American monitoring and excavation during construction projects will be consistent with current professional standards. All feasible care to avoid any unnecessary disturbance, physical modification, or separation of human remains and associated funerary objects shall be taken.			

[a] *The Monitoring Phase/Monitoring Actions are applicable to prcjects that are subject to the measures as described within each measure.*

AIR QUALITY TECHNICAL REPORT FOR THE ROW DTLA RESIDENTIAL PROJECT

I. Introduction

This Air Quality Emissions Technical Study (Air Quality Study) has been prepared to evaluate potential construction and operational air quality emissions impacts associated with the ROW DTLA Residential Project (Project) pursuant to the California Environmental Quality Act (CEQA).

The Project is located at 757–787 S. Alameda Street, 1318–1396 E. 7th Street, 736–796 S. Central Avenue, 1301–1327 E. 8th Street, 700–760 S. Market Court, 720–746 S. Terminal Street, and 760 S. Warehouse Street in the Downtown Community Plan area of the City of Los Angeles (City), presently know as ROW DTLA (Project Site). The Project proposes the redevelopment of two existing surface parking lots (Development Area) into a mixed-use development located on the north and south sides of Center Street, on the eastern edge of the Project Site. The Project proposes three eight-story buildings that would provide 1,000 total residential units, including 114 Very Low Income units, and 6,547 square feet of commercial uses. The Project would provide up to 1,092 vehicle parking spaces and approximately 529 bicycle parking spaces. The Project is expected to be completed in 2032.

On November 24, 2021, the City Council certified the Citywide Housing Element 2021–2029 and Safety Element Updates Final Environmental Impact Report (EIR), SCH No. 2021010130, EIR No. ENV-2020-6762-EIR (Program EIR), to adopt the 2021–2029 Citywide Housing Element and the Updates to the Safety Element and the Plan for a Healthy LA (Health Element). Pursuant to CEQA Guidelines Sections 15168(c)(4) and 15168(d), Projects that are found to be within the scope of the program analyzed in the Program EIR and its environmental effects do not require further CEQA documentation. The air quality analysis below confirms that the Project would not result in significant air quality impacts that were not already examined in the Program EIR.

II. Project Location and Existing Uses

The Project Site consists of three large, irregularly shaped parcels that collectively measure approximately 31 acres in size. The Project Site occupies the northern half of the block bounded by E. 7th Street on the north, S. Central Avenue on the west, S. Alameda

Street on the east, and E. Olympic Boulevard to the south, with the partially vacated former E. 8th and Bay streets providing internal access within the middle of the block.

The Project Site is located in an expansive industrial district east of Downtown Los Angeles. The area surrounding the Project Site is primarily developed with warehouses, cold storage facilities, small-scale manufacturing operations, and other industrial uses, though in more recent years newer commercial office, commercial retail, and residential uses have been developed in the vicinity of the Site.

The Project Site is comprised of an industrial complex historically called the Los Angeles Union Wholesale Terminal, previously owned by the Southern Pacific Railroad, which currently encompasses a total of eight buildings, including seven large industrial buildings that were constructed between 1917 and 1923, and a parking garage constructed in 2016 (the District).

The portion of the Project Site along Central Avenue is used as a wholesale produce market and an outdoor weekend market known as Smorgasburg. The middle portion of the Site between 7th and 8th Street supports 46 retailers and restaurants and another 48 office and hybrid office/light manufacturing tenants which span multiple industries including technology, apparel, construction, produce wholesale and consumer goods, with the exception of 747 S. Alameda Street, which is currently vacant. The Project Site also includes a ten-story concrete parking structure that was built in 2016 and is accessed via S. Alameda Street. The parking structure contains approximately 3,884 parking spaces

The Development Area is located within the eastern portion of the Project Site along Alameda Street and is comprised of approximately 4.85 gross acres. The Development Area is currently developed with surface parking.

III. Project Description

The Project includes the development of three mixed-use buildings containing 1,000 residential units including 114 Low Income Housing units in three buildings and 6,547 square feet of commercial (retail/restaurant) uses within two buildings. Building A would include commercial space at the first floor; 417 residential units at the first through eighth floors; and two levels of subterranean parking. Building B would include 216 residential units at the first through eight floors and two levels of subterranean parking. Building C would include commercial space at the first floor; 367 residential units at the first through eighth floors; and two levels of subterranean parking. The proposed buildings would range from approximately 100 feet to 103 feet in height. Upon completion, 884,278 square feet of new floor would be provided. When accounting for the existing floor area to remain,

approximately 2,477,695 square feet of floor area would be provided within the Project Site with a total FAR of 1.86:1. Buildings A and B will be completed in 2029 and occupied, while Building C would be under construction from 2030 to 2032.

The Project would include 1,092 vehicular parking spaces. A total of 96,278 square feet of open space would also be provided. The existing uses within the remainder of the Project Site outside of the Development Area will remain and would not be modified by the Project.

IV. Scope of Work

The Program EIR prepared an air quality analysis to identify potential impacts related to implementation of the City's updated Housing Element. As part of the air quality analysis, mitigation measures were proposed to require air quality analyses for discretionary projects meeting certain conditions. Mitigation measure 4.2-2(a) of the Program EIR requires projects to prepare an air quality impact analysis when construction exceeds more than 13,500 square feet of demolition, more than 5,000 cubic yards of soil cut/fill, or greater than 5-acres of graded area.

With regard to operations, mitigation measure 4.2-2(b) requires projects to prepare an air quality analysis if the project would include more than 462 single-family residential units, 612 multi-family residential units, or any equivalent thereof. With regard to construction Toxic Air Contaminants (TACs), discretionary projects with a construction duration of more than 18 months that are within 500 feet of other residences, require the preparation of a health risk assessment (HRA) per Mitigation Measure 4.2-3 of the Program EIR. However, this requirement is waived if the Project commits to using USEPA Tier 4 emissions certified equipment.

As the Project would require export of more than 5,000 cubic yards of soil and would include more than 612 multi-family units, an air quality analysis was prepared to analyze the Project's construction and operational air quality impacts. As the Project would use USEPA Tier 4 emissions certified equipment, an HRA is not required.

The following analysis addresses the air emissions generated by construction and operation of the Project. The analysis demonstrates that the Project would not result in new significant air quality impacts not already addressed in the Program EIR.

The analysis of Project-generated air emissions focuses on whether the Project would cause an exceedance of an ambient air quality standard or South Coast Air Quality Management District (SCAQMD)significance threshold and provides a comparison with the

analysis in the Program EIR. Calculation worksheets, assumptions, and model outputs for the air quality analysis are included in Appendix AQ-3.

V. Environmental Impacts

A. Regulatory Framework

There are several plans, regulations, and programs that include policies, requirements, and guidelines regarding air quality at the federal, state, regional, and local levels. These regulations are included as Appendix AQ-1.

B. Air Quality Methodology

This air quality analysis focuses on the potential change in the air quality environment due to implementation of the Project. Air pollutant emissions would result from both construction and operation of the Project. Specific methodologies used to evaluate these emissions are discussed below.

The SCAQMD is primarily responsible for planning, implementing, and enforcing air quality standards for the South Coast Air Basin in which the Project is located. The SCAQMD published the CEQA Air Quality Handbook (approved by the SCAQMD's Governing Board in 1993) to provide local governments with guidance for analyzing and mitigating project-specific air quality impacts. The CEQA Air Quality Handbook provides standards, methodologies, and procedures for conducting air quality analyses. However, the SCAQMD is currently in the process of replacing the CEQA Air Quality Handbook with the Air Quality Analysis Guidance Handbook.

In order to assist the CEQA practitioner in conducting an air quality analysis in the interim while the replacement *Air Quality Analysis Guidance Handbook* is being prepared, supplemental guidance/information is provided on the SCAQMD website and includes: (1) Emission Factor (EMFAC) on-road vehicle emission factors; (2) background CO concentrations; (3) localized significance thresholds; (4) mitigation measures and control efficiencies; (5) mobile source toxics analysis; (6) off-road mobile source emission factors; (7) $PM_{2.5}$ significance thresholds and calculation methodology; and (8) updated SCAQMD Air Quality Significance Thresholds.[1] SCAQMD also recommends using approved models to calculate emissions from land use projects, such as the California Emissions Estimator

[1] *SCAQMD, Air Quality Analysis Handbook, www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook, accessed January 21, 2025.*

Model (CalEEMod). These recommendations were followed in the preparation of this analysis.

(1) Construction

Construction of the Project has the potential to generate temporary air pollutant emissions through the use of heavy-duty construction equipment, such as excavators and cranes, and through vehicle trips generated from workers and haul and delivery trucks traveling to and from the Project Site. In addition, fugitive dust emissions could result from demolition and various soil-handling activities. Mobile source emissions, primarily NO_X, could result from the use of construction equipment. Construction emissions can vary substantially from day to day, depending on the level of activity, the specific type of construction activity, and prevailing weather conditions. The assessment of construction air quality impacts considers each of these potential sources.

(a) Regional Emissions

The Project's "regional" emissions refer to emissions that will be evaluated based on regional significance thresholds established by SCAQMD. SCAQMD provides regional significance thresholds for the following criteria pollutants: Volatile Organic Compounds (VOC), Nitrogen Oxides (NO_X), Carbon Monoxide (CO), Sulfur Dioxide (SO_X), particulate matter with a diameter of 10 microns or less (PM_{10}) and particulate matter with a diameter of 2.5 microns or less ($PM_{2.5}$). Daily regional emissions during construction are estimated by assuming a conservative estimate of construction activities (i.e., assuming all construction occurs at the earliest feasible date) and applying mobile source and fugitive dust emissions factors. The emissions are estimated using CalEEMod (Version 2022.1) software, an emissions inventory software program recommended by SCAQMD. The CalEEMod model was developed for the California Air Pollution Control Officers Association (CAPCOA) in collaboration with SCAQMD and received input from other California air districts, and is currently used by numerous lead agencies in the Los Angeles area and within the state for quantifying the emissions associated with development projects undergoing environmental review, including by the City of Los Angeles.

CalEEMod is based on outputs from Off-road Emissions Inventory Program model[2] (OFFROAD) and EMission FACtor model[3] (EMFAC), which are emissions estimation models developed by the California Air Resources Board (CARB), and used to calculate emissions from construction activities, including off- and on-road vehicles, respectively. CalEEMod also

---

[3] *CARB, EMFAC 2021, https://arb.ca.gov/emfac/, accessed January 21, 2025.*

relies upon known emissions data associated with certain activities or equipment (often referred to as "default" data, values or factors) that can be used if site-specific information is not available. CalEEMod contains default values to use in each specific local air district region. Appropriate statewide default values can be used, if regional default values are not defined. The input values used in this analysis were adjusted to be Project-specific based on equipment types and the construction schedule. These values were then applied to the construction phasing assumptions used in the criteria pollutant analysis to generate criteria pollutant emissions values for each construction activity. Construction tasks were aggregated to reflect overlapping tasks and identify the reasonably expected maximum construction emissions occurring over the course of Project construction. To be conservative, this analysis evaluates the Project's air quality impacts during construction based on reasonably expected maximum daily construction emissions even though such emissions would not occur throughout the entire construction phase. Detailed construction equipment lists, construction scheduling, and emissions calculations are provided in Appendix AQ-3.

(b) Localized Emissions

The localized effects from the on-site portion of daily construction emissions were evaluated at sensitive receptor locations potentially impacted by the Project according to SCAQMD's LST methodology, which uses on-site mass emissions rate look-up tables and Project-specific modeling, where appropriate, to assess whether the Project's local emissions would exceed SCAQMD's significance thresholds, as described above.[4] SCAQMD provides LSTs applicable to the following criteria pollutants: NO_X, CO, PM_{10}, and $PM_{2.5}$.[5] SCAQMD does not provide a LST for SO_2, Pb or H_2S since land use development projects typically result in negligible construction and long-term operation emissions of these pollutants. Since VOCs are not a criteria pollutant, there is no ambient standard or SCAQMD LST for VOCs. Due to the role VOCs play in O_3 formation, it is classified as a precursor pollutant, and only a regional emissions threshold has been established.

LSTs represent the maximum emissions from a project that are not expected to cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard and are developed based on the ambient concentrations of that pollutant for each source receptor area and distance to the nearest sensitive receptor. SCAQMD developed mass rate look-up tables for each source receptor area in order to determine whether or not a project may generate significant adverse localized air quality impacts.

---

[4] *SCAQMD, LST Methodology Appendix C-Mass Rate LST Look-Up Table, October 2009.*

[5] *SCAQMD, LST Methodology, June 2003, revised July 2008, p. 1-4.*

SCAQMD provides LST mass rate look-up tables for projects with active construction areas that are less than or equal to 5 acres.[6]

(2) Operation

(a) Regional Emissions

Analysis of the Project's impact on regional air quality during long-term Project operations (i.e., after construction is complete) takes into consideration four types of sources: (1) area, (2) energy, (3) mobile, and (4) stationary. Area source emissions are generated by, among other things, landscape equipment, fireplaces, and the use of consumer products. Energy source emissions are generated as a result of activities in buildings for which natural gas is used (e.g., natural gas for commercial cooking).[7] Mobile source emissions are generated by the increase in motor vehicle trips to and from the Project Site associated with operation of the Project. Stationary source emissions are generated from proposed emergency generators during routine maintenance/testing.

Criteria pollutants are emitted during the generation of electricity at fossil fuel power plants. When electricity is used in buildings, the electricity generation typically takes place at offsite power plants, the majority of which burn fossil fuels. Because power plants are existing stationary sources permitted by air districts and/or the USEPA, criteria pollutant emissions are generally associated with the power plants themselves, and not individual buildings or electricity users. Additionally, criteria pollutant emissions from power plants are subject to local, state, and federal control measures, which can be considered to be the maximum feasible level of mitigation for stack emissions. CalEEMod, therefore, does not calculate criteria pollutant emissions from regional power plants associated with on-site use.

Similar to construction, SCAQMD's CalEEMod model was used to estimate Project emissions during operation. The CalEEMod default for VMT was bypassed to account for the Project-related VMT provided in the Transportation Assessment for the Project which was conducted consistent with Los Angeles Department of Transportation's (LADOT) *Transportation Assessment Guidelines*.[8] Consistent with these guidelines, the City and LADOT developed a "VMT Calculator" to comply with SB 743, which requires lead agencies to adopt VMT criteria to determine transportation related impacts. CalEEMod calculates mobile-source emissions using the Project's VMT, trip generation, and emission factors

---

[6] *As discussed below, the LSTs were derived for the 4.85 acre Development Area.*

[7] *The Prcject's retail component may include restaurant uses. Natural gas consumption for restaurant cooking is exempt under the City's all-electric buildings ordinance.*

[8] *Gibson Transportation Consultants, Inc., Transportation Assessment for The Row DTLA Residential Prcject, Los Angeles, California, December 2024.*

based on EMFAC2021.[9] Area source emissions are based on landscaping equipment, and consumer product usage (including paints) rates provided in CalEEMod. Emissions associated with use of emergency generators were calculated using CalEEMod, in which emission factors are based on Table 3.4-1 (Gaseous Emission Factors for Large Stationary Diesel Engines) from EPA's AP-42: Compilation of Air Pollutant Emission Factors. The emissions are based on the horsepower rating of the diesel generator and the number of hours operated per year for testing purposes.

To determine if a significant air quality impact would occur, the increase in regional operational emissions generated by the Project was compared against SCAQMD's significance thresholds.[10] To be conservative, this analysis evaluates the Project's air quality impacts during operations based on reasonably expected maximum operational emissions even though such emissions would not occur throughout the entire operational phase. Also, the Development Area is an existing, unused, parking lot which does not generate vehicle trips or emissions. Therefore, existing emissions were assumed to be zero. Refer to Appendix AQ-2 for additional information regarding methodology.

(b) Localized Emissions

(i) On-Site Emissions

Localized impacts from Project operations include the calculation of on-site emissions (e.g., combustion from natural gas usage) using SCAQMD's recommended CalEEMod and evaluation of these emissions consistent with SCAQMD's LST methodology discussed above.

(ii) Off-Site Emissions

Potential localized CO concentrations from induced traffic at nearby intersections are also addressed, consistent with the methodologies and assumptions used in the consistency analysis provided in the 2003 AQMP. The 2003 AQMP was the latest AQMP to perform the modeling attainment demonstration for CO.[11]

[10] *SCAQMD, SCAQMD Air Quality Significance Thresholds, revised March 2015. SCAQMD based these thresholds, in part, on the federal Clean Air Act and, to enable defining "significant" for CEQA purposes, defined the setting as the South Coast Air Basin. (See SCAQMD, CEQA Air Quality Handbook, April 1993, pp. 6-1 and 6-2.).*

[11] *SCAQMD, 2003 Air Quality Management Plan, Final 2003 AQMP Appendix V Modeling and Attainment Demonstrations, August 2003*

It has been recognized that CO exceedances are caused by vehicular emissions,[12] primarily when idling at intersections.[13,14] Accordingly, vehicle emissions standards have become increasingly more stringent. Before the first vehicle emission regulations, cars in the 1950s were typically emitting about 87 grams of CO per mile.[15] Since the first regulation of CO emissions from vehicles (model year 1966) in California, vehicle emissions standards for CO applicable to light duty vehicles have decreased by 96 percent for automobiles,[16,17] and new cold weather CO standards have been implemented, effective for the 1996 model year.[18] Currently, the CO standard in California is a maximum of 3.4 grams/mile for passenger cars (with provisions for certain cars to emit even less).[19] With the turnover of older vehicles, introduction of cleaner fuels and implementation of control technology on industrial facilities, CO concentrations in the Air Basin have steadily declined.

The analysis prepared for CO attainment in the Air Basin by SCAQMD can be used to assist in evaluating the potential for CO exceedances in the Air Basin. CO attainment was thoroughly analyzed as part of SCAQMD's 2003 AQMP and the 1992 Federal Attainment Plan for Carbon Monoxide (1992 CO Plan).[20] As discussed in the 1992 CO Plan, peak CO concentrations in the Air Basin are due to unusual meteorological and topographical conditions, and not due to the impact of particular intersections. Considering the region's unique meteorological conditions and the increasingly stringent CO emissions standards, CO modeling was performed as part of the 1992 CO Plan and subsequent plan updates and air quality management plans.

In the 1992 CO Plan, a CO hot spot analysis was conducted for four busy intersections in Los Angeles at the peak morning and afternoon time periods. The busiest intersection evaluated was at Wilshire Boulevard and Veteran Avenue, which had a daily traffic volume

of approximately 100,000 vehicles per day. The 2003 AQMP estimated that the 1-hour concentration for this intersection was 4.6 ppm, which indicates that the most stringent 1-hour CO standard (20.0 ppm) would likely not be exceeded until the daily traffic at the intersection exceeded more than 400,000 vehicles per day.[21] As an initial screening step, if a project intersection does not exceed 400,000 vehicles per day, then the project does not need to prepare a detailed CO hot spot analysis. If a project would potentially result in a CO hotspot based on the initial screening, detailed modeling may be performed using California LINE Source Dispersion Model, version 4 (CALINE4), which is a model used to assess air quality impacts near transportation facilities (i.e., roadways, intersections, and parking facilities).

(3) Toxic Air Contaminants Impacts (Construction and Operations)

Potential TAC impacts are evaluated by conducting a qualitative analysis consistent with CARB's *Air Quality and Land Use Handbook: A Community Health Perspective (CARB's Handbook)*, which provides recommendations regarding the siting of new sensitive land uses near potential sources of toxic air emissions (e.g., freeways, distribution centers, rail yards, ports, refineries, chrome plating facilities, dry cleaners, and gasoline dispensing facilities).[22] SCAQMD adopted similar recommendations in its *Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning*.[23] Given that Page 2-3 of the SCAQMD guidance states that "the potential for public health impacts remains unchanged when siting sensitive receptors near a pollution source or a pollution source near a sensitive receptor," and has adopted similar siting distances from the CARB Handbook, the City as Lead Agency has elected to use the siting distances in Table 1-1 of the CARB Handbook for evaluating health risk impacts from TAC sources and on sensitive uses. The qualitative analysis consists of reviewing the Project to identify any new or modified TAC emissions sources and evaluating the potential for such sources to cause significant TAC impacts. This qualitative evaluation also takes into account the Project's potential source of TAC emissions and distance to sensitive receptors based on CARB siting distances. If the qualitative evaluation does not rule out significant impacts from a new source, or modification of an existing TAC emissions source, a more detailed analysis is conducted. For the detailed analysis, downwind sensitive receptor locations are identified, and site-specific dispersion modeling is conducted to estimate Project impacts.

C. Air Quality Impacts

Impact Determination in the Housing Element Update Program EIR

A summary of the analysis from Section 4.2, Air Quality, of the Housing Element Update Program EIR, is provided below.

With regard to Threshold (a), as detailed in the Program EIR, implementation of the Housing Element Update would not conflict with the implementation of transportation control measures (TCMs) from the AQMP and would include policies to further reduce air pollutant emissions through promoting transportation and land use design factors and would therefore be consistent with the AQMP control measures. As such, impacts were determined to be less than significant.

With regard to Threshold (b), as evaluated in the Program EIR, anticipated construction and operations of projects would exceed SCAQMD regional significance thresholds. The Program EIR included mitigation measures 4.2-2(a) and 4.2-2(b) for construction and operation, respectively. As discussed above, mitigation measures 4.2-2(a) and 4.2-2(b) of the Program EIR require air quality analyses for Projects meeting certain conditions. In addition, these mitigation measures include requirements such as EPA Tier 4 emissions compliant equipment, haul trucks meeting Model Year 2010 emissions standards and use of alternative fueled equipment. However, the Program EIR concluded that impacts remained significant and unavoidable under both construction and operation.

With regard to Threshold (c), as evaluated in the Program EIR, anticipated construction and operations within the Housing Element Update would not exceed SCAQMD's localized significance thresholds except for TACs during construction. The Program EIR included Mitigation Measure 4.2-3, which requires a HRA or Tier 4 construction equipment for projects with anticipated construction durations longer than 18 months. As the Project would use EPA Tier 4 emissions compliant equipment, an HRA is not required for the Project. The Program EIR concluded that construction related TAC impacts would be less than significant after mitigation and all other substantial pollutant concentrations were found to be less than significant.

Regarding Threshold (d), the Initial Study concluded that implementation of the Housing Element Update would not result in significant construction and operational odor impacts.

The regulatory setting of the Air Quality analysis contained in the Program EIR contains a number of Regulatory Compliance Measures (RCMs) which are regulations adopted for the protection of air quality. The RCMs are considered in this air quality analysis.

Among others, housing development accommodated under the Housing Element Update would be required to comply with the following RCMs:

RCM-AQ-1 (Demolition, Grading and Construction Activities): The project shall comply with all applicable standards of the Southern California Air Quality Management District, including the following provisions of District Rule 403:

- All unpaved demolition and construction areas shall be wetted at least twice daily during excavation and construction, and temporary dust covers shall be used to reduce dust emissions and meet SCAQMD District Rule 403. Wetting could reduce fugitive dust by as much as 50 percent.
- The construction area shall be kept sufficiently dampened to control dust caused by grading and hauling, and at all times provide reasonable control of dust caused by wind.
- All clearing, earth moving, or excavation activities shall be discontinued during periods of high winds (i.e., greater than 15 mph), so as to prevent excessive amounts of dust.
- All dirt/soil loads shall be secured by trimming, watering or other appropriate means to prevent spillage and dust.
- All dirt/soil materials transported off-site shall be either sufficiently watered or securely covered to prevent excessive amount of dust.
- General contractors shall maintain and operate construction equipment so as to minimize exhaust emissions.
- Trucks having no current hauling activity shall not idle but be turned off.
- Vehicle speeds shall be limited to 15 mph on unpaved roads.

RCM-AQ-2 (Construction Equipment Fleet Regulations): In accordance with California Off-Road Diesel-Fueled Fleet Regulations, equipment operators shall be registered using the Diesel Off-Road Online Reporting System (DOORS) and diesel-powered construction equipment with 25 horsepower or greater engines shall meet exhaust PM and NOx emissions standards.

RCM-AQ-3 (Idling of Diesel-fueled Commercial Vehicles): In accordance with Sections 2485 in Title 13 of the California Code of Regulations, the idling of all diesel-fueled commercial vehicles (weighing over 10,000 pounds) shall be limited to five minutes at any location.

RCM-AQ-4 (Operation of Diesel-fueled Commercial Vehicles): In accordance with Section 93115 in Title 17 of the California Code of Regulations, operation of any stationary, diesel-fueled, compression- ignition engines

shall meet specified fuel and fuel additive requirements and emission standards.

RCM-AQ-5 (Architectural Coatings): The project shall comply SCAQMD Rule 1113 limiting the volatile organic compound content of architectural coatings.

RCM-AQ-6 (Adhesive and Sealant Applications): Compliance with provisions of the SCAQMD Rule 1168. Projects shall comply with SCAQMD Rule 1168 limiting the VOC content of adhesives, sealants, adhesive primers, and sealant primers.

RCM-AQ-7 (Emission Control Measures): New on-site facility nitrogen oxide emissions shall be minimized through the use of emission control measures (e.g., use of best available control technology for new combustion sources such as boilers and water heaters) as required by SCAQMD Regulation.

The analysis below was performed consistent with mitigation measures 4.2-2(a) and 4.2-2(b) of the Program EIR, which requires an air quality analysis for projects that meet specific criteria. As discussed above, the Project meets certain criteria of exporting more than 5,000 cubic yards of soil and include more than 612 multi-family units which requires an air quality analysis.

Impact Analysis

a. Would the project conflict with or obstruct implementation of the applicable air quality plan?

Less Than Significant Impact. The Project Site, including the Development Area, is located within the 6,745-square-mile South Coast Air Basin (Basin), which includes all of Orange County and portions of Los Angeles, Riverside, and San Bernardino Counties. The SCAQMD is the air pollution control agency for the Basin and is required, pursuant to the Clean Air Act, to reduce emissions of criteria pollutants for which the Basin is in non-attainment (i.e., ozone [O_3]). SCAQMD's 2022 Air Quality Management Plan (2022 AQMP) is the regional blueprint for achieving air quality standards and healthful air. The 2022 AQMP contains a comprehensive list of pollution control strategies directed at reducing emissions and achieving ambient air quality standards. These strategies are developed, in part, based on regional population, housing, and employment projections prepared by SCAG.

SCAG is the regional planning agency for Los Angeles, Orange, Ventura, Riverside, San Bernardino, and Imperial Counties and addresses regional issues relating to transportation, the economy, community development and the environment. With regard to

future growth, SCAG prepared the 2020–2045 Regional Transportation Plan/Sustainable Communities Strategy (2020–2045 RTP/SCS) which provides population, housing, and employment projections for cities under its jurisdiction.[24] The growth projections in the 2020–2045 RTP/SCS are based in part on projections originating under County and City General Plans. These growth projections were utilized in the preparation of the air quality forecasts and consistency analysis included in the 2022 AQMP.

The 2022 AQMP was adopted by the SCAQMD as a program to lead the Air Basin into compliance with several criteria pollutant standards and other federal requirements. It relies on emissions forecasts based on demographic and economic growth projections provided by SCAG's 2020–2045 RTP/SCS. SCAG is charged by California law to prepare and approve "the portions of each AQMP relating to demographic projections and integrated regional land use, housing, employment, and transportation programs, measures and strategies." Projects whose growth is included in the projections used in the formulation of the AQMP are consistent with the plan and would not interfere with its attainment. The SCAQMD recommends that, when determining whether a project is consistent with the current AQMP, a lead agency must assess whether the project would directly obstruct implementation of the plan and whether it is consistent with the demographic and economic assumptions (typically land use related, such as resultant employment or residential units) upon which the plan is based.[25]

As described in detail above, the Project would include the development of three new buildings comprising 884,278 square feet. These buildings would provide 1,000 multifamily units, including 114 Extremely Low-Income affordable housing units, and 6,547 square feet of neighborhood-serving commercial uses. The Project would increase the residential population as well as the daytime population (employees) within the Development Area. Specifically, based on the City's VMT Calculator Documentation, the Project could generate a new residential population of approximately 2,354 persons.[26] The Project's 6,547 square

---

[24] *On April 4, 2024, SCAG adopted the 2024–2050 RTP/SCS. Similar to the 2020–2045 RTP/SCS, the 2024–2050 RTP/SCS is a long-term plan for the Southern California region that details investment in the transportation system and development in communities to meet the existing and future needs of the region through projects, investments, policies and strategies. While the 2024–2050 RTP/SCS has been adopted by SCAG, the 2024–2050 RTP/SCS has not yet been approved by CARB. In addition, SCAG's 2020–2045 RTP/SCS forecasted population, housing, employment growth data were used to characterize regional growth in the 2022 AQMP. As such, this analysis uses SCAG's 2020–2045 RTP/SCS.*

[25] *SCAQMD, CEQA Air Quality Handbook, Section 12.1, 1993.*

[26] *Based on City of Los Angeles VMT Calculator Documentation (Version 1.3), May 2020, Table 1: Land Use and Trip Generation Base Assumptions. The generation rate of 2.25 persons per dwelling unit for "Multi-Family" land use is applied to the 886 dwelling units. The generation rate of 3.14 persons per dwelling unit for "affordable Housing – Family" land use is applied to the 114 affordable dwelling units. As documented in Appendix AQ-3, VMT Analysis LADOT Calculator Worksheets, of the Project's Transportation Assessment, the Project would generate approximately 2,354 residents.*

feet of ground-floor commercial space would generate approximately 26 net new employees based on employee generation rates developed by the LADOT.[27] The increase in population would represent 1.02 percent of the population increase projected for the City in the 2020–2045 RTP/SCS.[28] This increase in population and employees would be well within the existing population and employment projections for the region Furthermore, while the Project would generate jobs associated with construction of the Project, these employment opportunities would be short-term opportunities during construction and are employment positions that circulate throughout the region based on the construction site. Therefore, the Project would be consistent with the demographic projections set forth in SCAG's 2020–2045 RTP/SCS, which were also used in the 2022 AQMP. Thus, the Project would not conflict with or obstruct implementation of the 2022 AQMP.

With regard to consistency with growth projections of the 2024–2050 RTP/SCS, the Project would represent approximately 2.36 percent of the projected population growth in the SCAG region between 2024 and 2032 (i.e., the Project's baseline and buildout years) and approximately 0.03 percent of the projected employment growth in the SCAG Region between 2024 and 2032.[29,30] Therefore, the Project's contribution to population and employment growth would be also consistent with 2024–2050 RTP/SCS projections.

The City's General Plan Air Quality Element identifies policies and strategies for advancing the City's clean air goals. To achieve the goals of the Air Quality Element, performance-based standards have been adopted by the City of Los Angeles to provide flexibility in implementation of its policies and objectives. The goals, objectives, and policies in the Air Quality Element applicable to the Project include:

> ***Goal 1:*** *Good air quality and mobility in an environment of continued population growth and healthy economic structure.*
>
> > **Objective 1.1:** It is the objective of the City of Los Angeles to reduce air pollutants consistent with the Regional Air Quality Management Plan (AQMP), increase traffic mobility, and sustain economic growth citywide.

---

[27] *Based on City of Los Angeles VMT Calculator Documentation (Version 1.3), May 2020, Table 1: Land Use and Trip Generation Base Assumptions. The generation rate of 0.004 people per square feet for "High-Turnover Sit-Down Restaurant" land use is applied to the 6,547 square feet of restaurant use. As documented in Appendix AQ-3, VMT Analysis LADOT Calculator Worksheets, of the Project's Transportation Assessment, the Project would generate approximately 26 employees.*

[28] *Project Residents (2,354) / City population increase (231,034) * 100% = 1.02%*

[29] *Project Residents (2,354) / City population increase (99,600) * 100% = 2.36%*

[30] *Project Employees (26) / City employee increase (82,900) * 100% = 0.03%*

Objective 1.3: It is the objective of the City of Los Angeles to reduce particulate air pollutants emanating from unpaved areas, parking lots, and construction sites.

Policy 1.3.2: Minimize particulate emissions from unpaved roads and parking lots which are associated with vehicular traffic.

Policy 4.2.3: Ensure that new development is compatible with pedestrians, bicycles, transit, and alternative fuel vehicles.

As previously noted, the Project would add new residential and commercial uses within the Project Site resulting in increases in residential population and employees. The Project Site's location within the existing highly urbanized Downtown Community Plan area, SCAG-designated High Quality Transit Area (HQTA) and City-designated Transportation Priority Area (TPA) would reduce per capita vehicle miles traveled (VMT) and related vehicle emissions in comparison to a project located in a non-urban environment, as discussed further in the Transportation Assessment (which includes the VMT Calculator analysis for the Project in Appendix D).[31] The Project's 1,000 residential units, including the 114 affordable units, would provide the opportunity for workers to live within close proximity to their place of employment. In addition, the Project would be developed in an urban area within proximity to other residential and commercial uses and along an active transportation corridor with various public transit options and would include short- and long-term bicycle parking spaces for the proposed uses. The Project would also include primary entrances for pedestrians and bicyclists that would be safe and easily accessible. As such, the Project would promote the use of alternative modes of transportation and would facilitate reduced VMT compared to an alternative project without such features, as discussed in the Transportation Assessment.

As shown in Table 1 through Table 4 on pages 17 through 20, Project implementation would not exceed California or federal ambient air quality standards or thresholds. As the Project would not increase the frequency or severity of an existing air quality violation or cause or contribute to new violations for air quality pollutants including VOC, NO_x, CO, SO_x, PM_{10}, and $PM_{2.5}$, the Project would also not delay timely attainment of air quality standards or interim emission reductions specified in the 2022 AQMP. In addition, the Project would be consistent with the population and employment growth projections in the AQMP. ***Therefore, the Project would not conflict with or obstruct implementation of the SCAQMD's AQMP, and impacts would be less than significant.*** **In addition, no new or greater significant impacts are anticipated under the Project compared to the Program EIR.**

Threshold (b): Would the Project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or State ambient air quality standard?[32]

Less Than Significant Impact with Mitigation. As indicated above, the Project Site is located within the South Coast Air Basin, which is characterized by relatively moderate air

[32] *See Appendix AQ-1 Regulatory Framework, Table 1, for the attainment status of criteria pollutants.*

quality. State and federal air quality standards are often exceeded in many parts of the Basin, including the monitoring stations nearest to the Project Site, which exceed the most stringent ambient air quality standard for ozone and particulate matter. The monitoring station most representative of the Project Site is the Central LA Station, located at 1360 North Main Street in the City of Los Angeles, approximately 2.2 miles north of the Project Site. The Project would contribute to local and regional air pollutant emissions during construction (short-term) and Project occupancy (long-term). However, as demonstrated by the following analysis, construction and operation of the Project would result in less than significant impacts relative to the daily significance thresholds for criteria air pollutant emissions established within the SCAQMD CEQA Air Quality Handbook.[33]

Construction

Construction of the Project has the potential to create regional air quality impacts by heavy-duty construction equipment and vehicle trips generated by construction workers traveling to and from the Project Site. In addition, fugitive dust emissions would result from site preparation, grading, and construction activities. Mobile source emissions, primarily particulate matter and NO_X would result from the use of construction equipment such as loaders, excavators, backhoes, and haul trucks. During the finishing phase, paving operations and the application of architectural coatings (e.g., paints) and other building materials would release VOCs. Construction emissions can vary substantially from day to day, depending on the level of activity, the specific type of operation and, for dust, the prevailing weather conditions.

Based on criteria set forth in the SCAQMD CEQA Air Quality Handbook, a project would have the potential to violate an air quality standard or contribute substantially to an existing violation and result in a significant impact with regard to construction emissions if regional emissions from both direct and indirect sources would exceed any of the following SCAQMD prescribed threshold levels: (1) 75 pounds a day for VOCs; (2) 100 pounds per day for NO_X; (3) 550 pounds per day for CO; (4) 150 pounds per day for SO_X; (5) 150 pounds per day for PM_{10}; and (6) 55 pounds per day for $PM_{2.5}$.[34]

Construction activities would include demolition, offsite improvements (utility relocation), site preparation, grading, paving, building construction, and architectural coatings. Construction is estimated to commence in June 2026 with completion in August 2032. Construction would require approximately 152,610 cubic yards of total soil export.

---

[34] *SCAQMD, Air Quality Analysis Guidance Handbook, www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook, accessed January 21, 2025.*

Regional Impacts

Regional construction-related emissions associated with heavy construction equipment were calculated using the SCAQMD recommended California Emissions Estimator Model (CalEEMod) Version 2022.1. Model results are provided in Appendix AQ-3. The analysis assumes that all construction activities would comply with SCAQMD Rule 403 regarding the control of fugitive dust. As discussed above, the Program EIR for the Housing Element Checklist includes Mitigation Measure 4.2-3 that states that if a Project is committed to using USEPA Tier 4 emissions certified equipment, a health risk assessment for construction activities is not required. As the Applicant has committed to use USEPA Tier 4 emissions equipment, this equipment has been incorporated into the analysis below and is also included as a mitigation measure to ensure compliance.[35]

A summary of maximum daily regional emissions for Project construction is presented in Table 1 on page 17, along with the regional significance thresholds for each air pollutant. As presented therein, construction-related daily maximum regional construction emissions (i.e., combined on-site and off-site emissions) would not exceed the thresholds for VOC, NO_X, CO, SO_X, PM_{10}, or $PM_{2.5}$.

The conclusions of the Program EIR indicated significant and unavoidable regional construction air quality impacts. Project construction emissions would not exceed the SCAQMD's significance thresholds for criteria pollutants. Accordingly, the Project would not create any new significant air quality impacts nor result in a substantial increase in a previously identified significant impact. Such impacts would be within the envelope of impacts set forth in the Program EIR.

As Project regional construction emissions would remain below SCAQMD significance thresholds, the Project would result in a less than significant impact with regard to regional construction emissions. In addition, no new or greater significant impacts are anticipated under the Project compared to the Program EIR

Localized Impacts

The localized effects from on-site daily emissions were evaluated at sensitive receptor locations potentially impacted by the Project according to SCAQMD's localized significance thresholds (LST) methodology, which uses on-site mass emissions rate lookup tables and

[35] *As demonstrated by the modeling data provided in the Appendix to this report, both localized and regional construction emissions under the Prcject would be less than significant without use of Tier 4 emissions equipment.*

Project-specific modeling, where appropriate.[36] SCAQMD provides LSTs applicable to the following criteria pollutants: NO_X, CO, PM_{10}, or $PM_{2.5}$. SCAQMD does not provide an LST for SO_2 since land use development projects typically result in negligible construction and long-term operation emissions of this pollutant. Since VOCs are not a criteria pollutant, there is no ambient standard or SCAQMD LST for VOCs. Due to the role VOCs play in O_3 formation, they are classified as a precursor pollutant, and only a regional emissions threshold has been established.

LSTs represent the maximum emissions from a project that are not expected to cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standards and are developed based on the ambient concentrations of that pollutant for each source receptor area and distance to the nearest sensitive receptor. The mass rate look-up tables were developed for each source receptor area and can be used to determine whether a project may generate significant adverse localized air quality impacts. SCAQMD provides LST mass rate look-up tables for projects with active construction areas that are less than or equal to 5 acres. The total active construction area for the North and South Parcels is 4.85-acres. The North Parcel would consist of approximately two acres while the South Parcel would consist of 2.85 acres.

Estimates of maximum construction-related localized (on-site) daily emissions for NO_X, CO, PM_{10}, and $PM_{2.5}$ are presented in Table 2 on page 18. Based on the construction site acreage and distance to the closest off-site sensitive receptors, localized construction emissions thresholds were obtained from the LST look-up tables and are also listed in Table 2. The nearest residential uses are located approximately 230 feet (70 meters) to the north of the Project Site (North Parcel). The same residential uses are approximately 990 feet (300 meters) from the South Parcel. As the South Parcel is located farther away from sensitive receptors, LST look-up thresholds would be less stringent in comparison to those for the North Parcel. Therefore, an LST based on a 70-meter receptor distance was used as a conservative assumption. Consistent with SCAQMD guidance, a 70-meter (230-foot) receptor distance was used to evaluate impacts at these receptors.[37] As presented in Table 2, construction-related daily maximum localized emissions would not exceed the SCAQMD daily significance thresholds for NO_X, CO, PM_{10}, or $PM_{2.5}$. Therefore, localized construction emissions resulting from the Project would result in less than significant impacts, and no mitigation measures are required.

The conclusions of the Program EIR indicated less than significant localized construction air quality impacts with mitigation. As shown in Table 1 and Table 2 on pages 17

---

[36] *SCAQMD, LST Methodology Appendix C—Mass Rate LST Look-Up Table, October 2009.*

[37] *SCAQMD LST thresholds are given at 25, 50, 100, 200 and 500-meter increments.*

and 18, Project construction emissions would not exceed the SCAQMD's significance thresholds for criteria pollutants. As discussed above, while the Project would not require mitigation with regards to localized construction emissions, the Project would implement use of EPA Tier 4 emissions compliant equipment and would also comply with SCAQMD Rules 403 and 113. Accordingly, the Project would not create any new significant air quality impacts nor result in a substantial increase in a previously identified significant impact. Such impacts would be within the envelope of impacts set forth in the Program EIR. **Therefore, localized construction emissions resulting from the Project would result in a less than significant impact. In addition, no new or greater significant impacts are anticipated under the Project compared to the Program EIR.**

Operation

SCAQMD has established separate significance thresholds to evaluate potential impacts due to the incremental increase in criteria air pollutants associated with long-term operations. Regional operational emissions for the Project were calculated using CalEEMod. Inputs into the CalEEMod model include Project-related vehicle trips, as well as land uses and square footage to determine energy, water usage, and waste generation. Mobile-source emissions were calculated within CalEEMod based on data from the trip generation and VMT analysis included in the Transportation Assessment. The VMT analysis is based on the LADOT VMT Calculator methodology and contains trip generation and daily VMT for the Project. In addition, the proposed land uses would result in an increase in emissions generated by energy sources (e.g., natural gas combustion) and area sources (e.g., landscape fuel combustion, consumer products, and architectural coatings).

Regional Impacts

The results of the modeled emissions calculations are provided in Table 3 on page 19, and CalEEMod model output files are provided in Appendix AQ-3. As indicated therein, the Project would result in an increase in criteria pollutant (VOC, NO_X, CO, SO_X, PM_{10}, and $PM_{2.5}$.) emissions which would fall below the SCAQMD daily significance thresholds for long-term regional emissions. Therefore, impacts associated with regional operational emissions would be less than significant, and no mitigation measures are required. **Therefore, regional operational emissions resulting from the Project would result in a less-than-significant air quality impact. In addition, no new or greater significant impacts are anticipated under the Project compared to the Program EIR.**

Localized Impacts

The operation of the Project would not introduce any major new sources of air pollution within the Project Site. Localized emissions estimates for criteria air pollutants from on-site sources are presented in Table 4 on page 20. The SCAQMD LST mass rate look-up tables,

which apply to projects that have active areas that are less than or equal to 5 acres in size, were used to evaluate potential localized impacts. As shown in Table 4, on-site localized operational emissions would not exceed any of the LSTs for NO_X, CO, PM_{10}, or $PM_{2.5}$. **Therefore, localized on-site operational emissions resulting from the Project would result in a less-than-significant air quality impact. In addition, no new or greater significant impacts are anticipated under the Project compared to the Program EIR.**

Under existing conditions, CO levels in the Project area are substantially below the federal and state standards.[38] No exceedances of CO have been recorded at monitoring stations in the Basin for some time, and the Basin is currently designated as a CO attainment area for both the California Ambient Air Quality Standards (CAAQS) and National Ambient Air Quality Standards (NAAQS). Air quality data from the SCAQMD Central LA monitoring station between years 2021-2023 indicate that the maximum CO levels in recent years are 2.0 ppm (1-hour average) and 1.6 ppm (8-hour average) compared to the thresholds of 20 ppm (1-hour average) and 9.0 ppm (8-hour average).[39]

Localized areas where ambient concentrations exceed state and/or federal standards are termed CO hotspots. Emissions of CO are produced in greatest quantities from motor vehicle combustion and are usually concentrated at or near ground level because they do not readily disperse into the atmosphere, particularly under cool, stable (i.e., low or no wind) atmospheric conditions. The potential for the Project to cause or contribute to CO hotspots was evaluated by comparing Project-impacted intersections (both intersection geometry and traffic volumes) with prior studies conducted by SCAQMD in support of their AQMP. As discussed below, this comparison provides evidence that the Project would not cause or contribute to the formation of CO hotspots, that CO concentrations at Project-impacted intersections would remain well below the ambient air quality standards, and that no further CO analysis is warranted or required.

SCAQMD conducted CO modeling for the 2003 AQMP for the four worst-case intersections in the Basin. These included: (a) Wilshire Boulevard and Veteran Avenue; (b) Sunset Boulevard and Highland Avenue; (c) La Cienega Boulevard and Century Boulevard; (d) Long Beach Boulevard and Imperial Highway. In the 2003 AQMP, SCAQMD noted that the intersection of Wilshire Boulevard and Veteran Avenue was the most congested intersection in Los Angeles County with an average daily traffic volume of about

---

[38] *SCAQMD, Historical Data by Year, www.aqmd.gov/home/air-quality/historical-air-quality-data/historical-data-by-year, accessed January 21, 2025.*

[39] *SCAQMD, Historical Data by Year, www.aqmd.gov/home/air-quality/historical-air-quality-data/historical-data-by-year, accessed January 21, 2025.*

100,000 vehicles per day.[40] Table 4-10 in Appendix V of the 2003 AQMP shows that the peak modeled CO concentration due to vehicle emissions at these four intersections was 4.6 ppm (1-hour average) and 3.2 ppm (8-hour average) at Wilshire Boulevard and Veteran Avenue.[41] The 2003 AQMP estimated that the 1-hour concentration for this intersection was 4.6 ppm, which indicates that the most stringent 1-hour CO standard (20.0 ppm) would likely not be exceeded until the daily traffic at the intersection exceeded more than 400,000 vehicles per day.[42] The AQMP CO hotspots modeling also took into account worst-case meteorological conditions and background CO concentrations. Metro evaluated the level of service (LOS) in the vicinity of the Wilshire Boulevard and Veteran Avenue intersection and found it to be LOS E at peak morning traffic and LOS F at peak afternoon traffic.[43] As an initial screening step, if a project intersection does not exceed 400,000 vehicles per day, then the project does not need to prepare a detailed CO hot spot analysis.

At buildout of the Project, the Project is projected to have a net increase of 4,648 daily trips as calculated by the City's VMT Calculator, included in Appendix AQ-3.[44] The 7th Street and Alameda Street intersection has the highest trip volumes within the Project vicinity.[45] Calculations provided in Appendix AQ-3 demonstrate that the 7th Street and Alameda Street intersection would result in approximately 119,000 vehicles per day with buildout of the Project, which is less than the 400,000 vehicles per day screening level described above. The addition of these trips to any of the nearest study intersections would not result in an average daily traffic volume anywhere near the volumes analyzed in the 2003 AQMP. Therefore, the Project would not trigger the need for CO hotspots modeling and would not cause any new or exacerbate any existing CO hotspots. As a result, impacts related to localized mobile-source CO emissions are considered less than significant. **The Project would not involve any new significant localized air quality impacts or increase the less than significant impacts identified in the Program EIR.**

Concurrent Construction and Operational Emissions

Buildings A and B will be completed in 2029 and occupied, while Building C would be under construction from 2030 to 2032. Therefore, concurrent construction of the North Parcel and operational impacts of the South Parcel in 2030 were evaluated. This development scenario results in the maximum amount of operational activity in terms of square footage developed on the Development Area for Buildings A and B and resultant daily vehicle trips (2,747 daily trips). This development scenario also conservatively assumes maximum daily activity (i.e., peak grading/excavation on-site heavy-duty construction equipment usage and 240 haul truck trips) occurring during construction of the remaining portion of the Project Site. Further, the concurrent construction and operation scenario is analyzed against the more stringent operational emissions thresholds for a more conservative analysis. Additional details regarding concurrent construction and operational land uses are provided in Appendix AQ-3.

As summarized in Table 5 on page 28, concurrent construction and operational regional emissions would not exceed the SCAQMD regional operation thresholds. Localized emissions were also calculated during a concurrent construction and operational scenario, and as shown in Table 5, localized emissions would not exceed the SCAQMD localized construction thresholds.

Table 5
Estimate of Maximum Regional Project Daily Concurrent (Year 2031) Operation and Construction Emissions—Unmitigated (pounds per day)[a,b]

Emission Source	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$

Numbers may not add up exactly due to rounding.

[a] *Compiled using the CalEEMod emissions model. Worksheets and CalEEMod modeling outputs are also provided in Appendix AQ-3.*

[b] *Unmitigated emissions assumes compliance with SCAQMD Rule 403, which is a requirement for construction prcjects within the South Coast Air Basin. While the measure is not considered mitigation, CalEEMod includes the measure under mitigation measures and, therefore, is reflected in the "mitigated" results within the CalEEMod output file.*

[c] *Potential localized construction impacts were evaluated using SCAQMD's LSTs for Source Receptor Area 1 for a 4.85-acre site to represent the entire Prcject Site. The closest sensitive receptor is comprised of residential uses north of the Prcject Site. The localized threshold is based on a 70-meter receptor distance which is the closest receptor distance on the SCAQMD mass rate LST look-up table.*

Source: Eyestone Environmental, 2025.

c. Would the project expose sensitive receptors to substantial pollutant concentrations?

Less Than Significant Impact. Certain population groups are especially sensitive to air pollution and should be given special consideration when evaluating potential air quality impacts. These population groups include children, the elderly, persons with pre-existing respiratory or cardiovascular illness, and athletes or others who engage in frequent exercise. As defined in the SCAQMD CEQA Air Quality Handbook, a sensitive receptor to air quality is defined as any of the following land use categories: (1) long-term health care facilities; (2) rehabilitation centers; (3) convalescent centers; (4) retirement homes; (5) residences; (6) schools (i.e., elementary, middle school, high schools); (7) parks and playgrounds; (8) childcare centers; and (9) athletic fields. As previously described, the nearest sensitive receptor with respect to air quality are residential uses located approximately 230 feet (70 meters) north of the Project Site.

As discussed above, construction and operation of the Project would result in less than significant impacts relative to both regional and localized air pollution emissions. Therefore, the Project would not expose sensitive receptors to substantial pollutant concentrations. In addition, Project construction activities would comply with SCAQMD Rule 403 regarding the control of fugitive dust and other specified dust control measures. As such, impacts to off-site sensitive receptors would be less than significant, and no mitigation measures are required.

When considering potential air quality impacts under CEQA, consideration is given to the location of sensitive receptors within proximity of land uses that emit TACs. CARB has published and adopted the Air Quality and Land Use Handbook: A Community Health Perspective (2005), which provides recommendations regarding the siting of new sensitive land uses near potential sources of toxic air emissions (e.g., freeways, distribution centers, rail yards, ports, refineries, chrome plating facilities, dry cleaners, and gasoline dispensing facilities). SCAQMD adopted similar recommendations in its Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning (2005). Together the CARB and SCAQMD guidelines recommend siting distances for both the development of sensitive land uses in proximity to TAC sources and the addition of new TAC sources in proximity to existing sensitive land uses.

The greatest potential for TAC emissions would generally involve diesel particulate emissions associated with heavy equipment operations during grading and excavation activities. According to SCAQMD methodology, health effects from carcinogenic air toxins are usually described in terms of individual cancer risk. "Individual Cancer Risk" is the likelihood that a person exposed to concentrations of TACs over a 70-year lifetime will contract cancer, based on the use of standard risk-assessment methodology. Construction

activities are temporary and short-term events; thus, construction activities would not result in a long-term substantial source of TAC emissions. The Project would also use EPA Tier 4 construction equipment which would reduce DPM emissions by at least 90 percent in comparison to Tier 2 equipment. With use of Tier 4 equipment, the Project would not be required to perform an HRA for construction emissions.

Additionally, SCAQMD's CEQA Air Quality Handbook and SCAQMD's supplemental online guidance/information do not require an HRA for short-term construction emissions. It is, therefore, not required or meaningful to evaluate long-term cancer impacts from construction activities which occur over relatively short durations. As such, given the short-term nature of these activities, TAC emission impacts during construction would be less than significant. In addition, no new or greater significant impacts are anticipated under the Project compared to the Program EIR.

With regard to Operational TAC emissions, the Project would not include sources of TACs such as boilers or any other non-emergency combustion sources. As the Project would not contain substantial TAC sources and is consistent with the CARB and SCAQMD guidelines, the Project would not result in the exposure of off-site sensitive receptors to carcinogenic or toxic air contaminants that exceed the maximum incremental cancer risk of 10 in one million or an acute or chronic hazard index of 1.0, and potential TAC impacts would be less than significant.

The SCAQMD recommends HRAs for substantial sources of diesel particulate matter such as operation of warehouse distribution and cold storage facilities. The Project does not propose any such uses, as such, an HRA was not required for the Project. Although, a cold storage facility and warehouse distribution facility are located within 1,000 feet of the Project site, the Project would comply with CalGreen building standards which requires installation of MERV 13 filtration for residential uses. **As such, Project-related TAC impacts during construction and operations would be less than significant. In addition, no new or greater significant impacts are anticipated under the Project compared to the Program EIR.**

Based on the above, the Project would not expose sensitive receptors to substantial pollutant concentrations, and impacts would be less than significant.

d. Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Less Than Significant Impact. No objectionable odors are anticipated because of either construction or operation of the Project. Specifically, construction of the Project would involve the use of conventional building materials typical of construction projects of similar

type and size. Any odors that may be generated during construction would be localized and temporary in nature and would not be sufficient to affect a substantial number of people. With respect to Project operation, according to the SCAQMD CEQA Air Quality Handbook, land uses associated with odor complaints typically include agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting, refineries, landfills, dairies, and fiberglass molding. The Project would not involve these types of uses as it would include residential, retail, and restaurant uses. On-site trash receptacles would be contained, located, and maintained in a manner that promotes odor control, and would not result in substantially adverse odor impacts.

Construction and operation of the Project would also comply with SCAQMD Rules 401, 402, and 403, regarding visible emissions violations. SCAQMD Rule 402 provides that a person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property. **Therefore, the potential odor impact during construction and operation of the Project would be less than significant, and no further analysis is required.**

Based on the above, construction and operation of the Project would not result in other emissions, such as those leading to odors, adversely affecting a substantial number of people, and impacts would be less than significant.

Cumulative Impacts

Less Than Significant Impact. According to SCAQMD, individual projects that exceed SCAQMD's recommended daily thresholds for project-specific impacts would cause a cumulatively considerable increase in emissions for those pollutants for which the Air Basin is in non-attainment. As discussed above, the Project's construction-related and operational air quality emissions would be less than significant. The Project would also implement required mitigation measures identified in the Program EIR, construction-related daily emissions at the Project Site would not exceed any of SCAQMD's regional or localized significance thresholds. Thus, the Project's contribution to cumulative construction-related regional and localized emissions would not be cumulatively considerable and, therefore, would be less than significant. While the Program EIR resulted in a significant and unavoidable cumulative impact, the Project would not create any new significant impacts related to cumulative construction emissions or result in a substantial increase in a previously identified significant impact. Such impacts would be within the envelope of impacts set forth in the Program EIR.

Similar to the Project, the greatest potential for TAC emissions at each related project would generally involve diesel particulate emissions associated with heavy equipment operations during grading and excavation activities. Construction activities are temporary and short-term events; thus, construction activities at each related project would not result in a long-term substantial source of TAC emissions. Additionally, SCAQMD's CEQA Air Quality Handbook and SCAQMD's supplemental online guidance/information do not require an HRA for short-term construction emissions. It is, therefore, not required or meaningful to evaluate long-term cancer impacts from construction activities which occur over relatively short durations. As such, given the short-term nature of these activities, cumulative TAC emission impacts during construction would be less than significant.

With respect to TAC emissions during operations, neither the Project nor any of the 24 related projects (which are largely residential, retail/commercial, and institutional) would represent a substantial source of TAC emissions, which are typically associated with large-scale industrial, manufacturing, and transportation hub facilities.[46] However, the Project and related projects would be subject to SCAQMD permitting and best available control technology (BACT) requirements to limit pollutant emissions. The Project and related projects would not generate substantial amounts of TACs and be consistent with the recommended screening level siting distances for TAC sources, as set forth in CARB's Land Use Guidelines. Therefore, the Project and related projects would not result in a cumulative impact requiring further evaluation. The related projects could generate minimal TAC emissions related to the use of consumer products and landscape maintenance activities, among other things. Pursuant to AB 1807, which directs CARB to identify substances as TACs and adopt airborne toxic control measures to control such substances, SCAQMD has adopted numerous rules (primarily in Regulation XIV) that specifically address TAC emissions. These SCAQMD rules have resulted in and will continue to result in substantial Basin-wide TAC emissions reductions. As such, cumulative TAC emissions during long-term operations would be less than significant. In addition, as discussed above, the Project would not result in any substantial sources of TACs that have been identified by the CARB's Land Use Guidelines and thus, the Project's contribution to cumulative TAC emissions could not be cumulatively considerable.

In conclusion, during construction and operation, the Project's regional, localized, and TAC emissions would not be cumulatively considerable, and cumulative impacts would be less than significant with mitigation.

(1) Adopted Mitigation Measures Applicable to the Project

Based on the analyses herein, the Project would not result in any significant impacts with regards to air quality emissions and additional mitigation measures are not required. In addition, the Project would not result in significant operational air quality impacts based on the analysis herein The Project would implement the following portions of the air quality mitigation measures included in the Program EIR:

Mitigation Measure 4.2-2(a) Construction Emissions Reductions: For discretionary projects, prior to issuance of a permit to construct and at the expense of the project applicant, the City shall retain a qualified air quality analyst to prepare an Air Quality Impact Analysis to analyze construction emissions for any discretionary project that would include either: demolition of more 13,500 square feet of building area; greater than 5,000 cubic yards of soil cut/fill; greater than 5-acres of graded area; or use of more than ten pieces of heavy-duty construction equipment and 150 truck trips on any given day during demolition, site clearing, or grading. The air quality analysis shall demonstrate that project emissions are less than applicable SCAQMD regional and LST thresholds.

The analysis provided herein in accordance with this mitigation measure demonstrates construction related impacts associated with the Project would be less than significant. In addition, as discussed above, the Applicant has committed to use of Tier IV emissions and will implement the following mitigation measure:

- Off-road diesel-powered construction equipment greater than 50 horsepower shall be certified for either the Tier **4** Final emission standards for CARB In-Use Off-Road Diesel-Fueled Fleets Regulations or the USEPA Tier 4 emission standards, where available..

Mitigation Measure 4.2-2(b) Operations Emissions Reduction: For discretionary projects, prior to issuance of a permit to construct and at the expense of the project applicant, the City shall retain a qualified air quality analyst to prepare an Air Quality Impact Analysis to analyze operational emissions for any discretionary project that would include more than 462 single-family residential units, 612 multi-family residential units, or any equivalent combination thereof.

The air quality analysis provided herein in accordance with this mitigation measure demonstrates that operational air quality impacts associated with the Project would be less than significant and no additional mitigation measures are required.

Appendix AQ-1: Regulatory Framework

- Appendix AQ-1: Regulatory Framework

Air Quality Regulatory Framework

There are several plans, regulations, and programs that include policies, requirements, and guidelines regarding air quality at the federal, state, regional, and local levels. As described below, these plans, guidelines, and laws include the following:

- Federal Clean Air Act
    - National Ambient Air Quality Standards
- California Clean Air Act
    - California Ambient Air Quality Standards
- California Code of Regulations
- State Programs for Toxic Air Contaminants
- State Diesel Risk Reduction Program
- South Coast Air Quality Management District
    - Air Quality Management Plan
    - Air Quality Guidance Documents
    - Rules and Regulations
- Southern California Association of Governments Regional Transportation Plan/ Sustainable Communities Strategy
- City of Los Angeles Air Quality Element
- City of Los Angeles Plan for a Healthy Los Angeles
- City of Los Angeles Municipal Code

(1) Federal

(a) Federal Clean Air Act

The federal Clean Air Act (CAA) was enacted in 1970 and has been amended numerous times in subsequent years, with the latest amendments occurring in 1990.[1] The CAA is the comprehensive federal law that regulates air emissions in order to protect

[1] 42 United States Code §7401 et seq., 1970.

public health and welfare.[2] The USEPA is responsible for the implementation and enforcement of the CAA, which establishes the NAAQS, specifies future dates for achieving compliance, and requires the USEPA to designate areas as attainment, nonattainment, or maintenance. The CAA also mandates that each state submit and implement a State Implementation Plan (SIP) for each criteria pollutant for which the state has not achieved the applicable NAAQS. The SIP includes pollution control measures that demonstrate how the standards for those pollutants will be met. The sections of the CAA most applicable to land use development projects include Title I (Nonattainment Provisions) and Title II (Mobile Source Provisions).[3]

Title I requirements are implemented for the purpose of attaining NAAQS for criteria air pollutants. Table 1 on page 3 shows the NAAQS currently in effect for each criteria pollutant and their corresponding attainment status. The Air Basin fails to meet national standards for O_3 and $PM_{2.5}$ and, therefore, is considered a federal "non-attainment" area for these pollutants. In addition, Los Angeles County fails to meet the national standard for Pb and, therefore, is considered a federal non-attainment area for Pb.

Title II pertains to mobile sources, which includes on-road vehicles (e.g., cars, buses, motorcycles) and non-road vehicles (e.g., aircraft, trains, construction equipment). Reformulated gasoline and automobile pollution control devices are examples of the mechanisms the USEPA uses to regulate mobile air emission sources. The provisions of Title II have resulted in tailpipe emission standards for vehicles, which have been strengthened in recent years to improve air quality. For example, the standards for NO_X emissions have been lowered substantially, and the specification requirements for cleaner burning gasoline are more stringent.

The NAAQS and the CAAQS for the California criteria air pollutants (discussed below) have been set at levels considered safe to protect public health, including the health of sensitive populations and to protect public welfare.

Table 1
Ambient Air Quality Standards

Pollutant	Averaging Period	Federal Standard[a,b]	California Standard[a,b]	South Coast Air Basin Attainment Status[c]	
				Federal Standard[d]	California Standard[d]
Ozone (O_3)	1 hour	—	0.09 ppm (180 µg/m^3)	—	Non-Attainment
	8 hour	0.070 ppm (137 µg/m^3)	0.07 ppm (137 µg/m^3)	Non-Attainment (Extreme)	Non-Attainment
Respirable Particulate Matter (PM_{10})	24 hour	150 µg/m^3	50 µg/m^3	Attainment	Non-Attainment
	Annual	—	20 µg/m^3		
Fine Particulate Matter ($PM_{2.5}$)	24 hour	35 µg/m^3	—	Non-Attainment (Serious)	Non-Attainment
	Annual	12 µg/m^3	12 µg/m^3		
Carbon MoNOxide (CO)	1 hour	35 ppm (40 mg/m^3)	20 ppm (23 mg/m^3)	Attainment	Attainment
	8 hour	9 ppm (10 mg/m^3)	9.0 ppm (10 mg/m^3)		
Nitrogen Dioxide (NO_2)	1 hour	0.10 ppm (188 µg/m^3)	0.18 ppm (339 µg/m^3)	Unclassified/ Attainment	Attainment
	Annual	0.053 ppm (100 µg/m^3)	0.030 ppm (57 µg/m^3)		
Sulfur Dioxide (SO_2)	1 hour	0.075 ppm (196 µg/m^3)	0.25 ppm (655 µg/m^3)	Unclassified/ Attainment	Attainment
	24 hour	0.14 ppm (365 µg/m^3)	0.04 ppm (105 µg/m^3)		
	Annual	0.03 ppm (80 µg/m^3)	—		
Lead (Pb)	30-day average	—	1.5 µg/m^3	Partial Non-Attainment[e]	Attainment
	Rolling 3-month average	0.15 µg/m^3	—		
Sulfates	24 hour	—	25 µg/m^3	—	Attainment
Hydrogen Sulfide (H_2S)	1 hour	—	0.03 ppm (42 µg/m^3)	—	Unclassified

ppm = parts per million by volume
µg/m^3 = micrograms per cubic meter

[a] *An ambient air quality standard is a concentration level expressed in either ppm or µg/m^3 and averaged over a specific time period (e.g., 1 hour). The different averaging times and concentrations are meant to protect against different exposure effects. Some ambient air quality standards are expressed as a concentration that is not to be exceeded. Others are expressed as a concentration that is not to be equaled or exceeded.*

[b] *Ambient Air Quality Standards based on the 2022 AQMP.*

Pollutant	Averaging Period	Federal Standard[a,b]	California Standard[a,b]	South Coast Air Basin Attainment Status[c]	
				Federal Standard[d]	California Standard[d]

[c] *"Attainment" means that the regulatory agency has determined based on established criteria, that the Air Basin meets the identified standard. "Non-attainment" means that the regulatory agency has determined that the Air Basin does not meet the standard. "Unclassified" means there is insufficient data to designate an area, or designations have yet to be made.*

[d] *California and Federal standard attainment status based on SCAQMD's 2022 AQMP.*

[e] *An attainment re-designation request is pending.*

(2) State

(a) California Clean Air Act

The California Clean Air Act (CCAA), signed into law in 1988, requires all areas of the state to achieve and maintain the CAAQS by the earliest practicable date. CARB, a part of the California Environmental Protection Agency (CalEPA), is responsible for the coordination and administration of both state and federal air pollution control programs within California. In this capacity, CARB conducts research, sets the CAAQS, compiles emission inventories, develops suggested control measures, and provides oversight of local programs. CARB establishes emissions standards for motor vehicles sold in California, consumer products, and various types of commercial equipment. It also sets fuel specifications to further reduce vehicular emissions. Table 1 on page 3 includes the CAAQS currently in effect for each of the criteria pollutants, as well as other pollutants recognized by the State. As shown in Table 1, the CAAQS include more stringent standards than the NAAQS. The Air Basin fails to meet state standards for O_3, PM_{10}, and $PM_{2.5}$ and, therefore, is considered a state "non-attainment" area for these pollutants.

(b) California Code of Regulations

The California Code of Regulations (CCR) is the official compilation and publication of regulations adopted, amended or repealed by the state agencies pursuant to the Administrative Procedure Act. The CCR includes regulations that pertain to air quality emissions. Specifically, Section 2485 in Title 13 of the CCR states that the idling of all diesel-fueled commercial vehicles (weighing over 10,000 pounds) during construction shall be limited to 5 minutes at any location. In addition, Section 93115 in Title 17 of the CCR states that operation of any stationary, diesel-fueled, compression-ignition engines shall meet specified fuel and fuel additive requirements and emissions standards.

(c) State Programs for Toxic Air Contaminants

The California Air Toxics Program is an established two-step process of risk identification and risk management to address potential health effects from exposure to toxic substances in the air. In the risk identification step, CARB and OEHHA determine if a substance should be formally identified, or "listed," as a TAC in California. In the risk management step, CARB reviews emission sources of an identified TAC to determine whether regulatory action is needed to reduce risk. Based on results of that review, CARB has promulgated a number of Airborne Toxic Control Measures (ATCMs), both for stationary and mobile sources, including On-Road and Off-Road Vehicle Rules. These ATCMs include measures, such as limits on heavy-duty diesel motor vehicle idling and emission standards for off-road diesel construction equipment, in order to reduce public exposure to DPM and other TACs. These actions are also supplemented by the Assembly Bill (AB) 2588 Air Toxics "Hot Spots" program and Senate Bill (SB) 1731, which require facilities to report their air toxics emissions, assess health risks, notify nearby residents and workers of significant risks if present, and reduce their risk through implementation of a risk management plan. SCAQMD has further adopted two rules to limit cancer and non-cancer health risks from facilities located within its jurisdiction. Rule 1401 (New Source Review of Toxic Air Contaminants) regulates new or modified facilities, and Rule 1402 (Control of Toxic Air Contaminants from Existing Sources) regulates facilities that are already operating. Rule 1402 incorporates requirements of the AB 2588 program, including implementation of risk reduction plans for significant risk facilities.

(a) State Diesel Risk Reduction Program

CARB identified particulate emissions from diesel-fueled engines as TACs in August 1998. Following the identification process, CARB was required by law to determine if there is a need for further control, which moved us into the risk management phase of the program. CARB developed the *Risk Reduction Plan to Reduce Particulate Matter Emissions from Diesel-Fueled Engines and the Vehicles and the Risk Management Guidance for the Permitting of New Stationary Diesel-Fueled Engines*. The Diesel Advisory Committee approved these documents on September 28, 2000, paving the way for the next step in the regulatory process: the control measure phase. During the control measure phase, specific statewide regulations designed to further reduce DPM emissions from diesel-fueled engines and vehicles have and continue to be evaluated and developed. The goal of each regulation is to make diesel engines as clean as possible by establishing state-of-the-art technology requirements or emission standards to reduce DPM emissions.

(3) Regional

The SCAQMD is primarily responsible for planning, implementing, and enforcing air quality standards for the South Coast Air Basin. The Air Basin is a subregion within

the western portion of the SCAQMD jurisdiction as the SCAQMD also regulates portions of the Salton Sea Air Basin and Mojave Desert Air Basin within Riverside County.

(a) Air Quality Management Plan and Regional Transportation Plan/ Sustainable Communities Strategy

To meet the NAAQS and CAAQS, the SCAQMD has adopted a series of AQMPs, which serve as a regional blueprint to develop and implement an emission reduction strategy that will bring the area into attainment with the standards in a timely manner. The AQMPs are incorporated into the SIP. The 2022 AQMP includes strategies to ensure that rapidly approaching attainment deadlines for O_3 and $PM_{2.5}$ are met and that public health is protected to the maximum extent feasible. The most significant air quality challenge in the Air Basin is to reduce NO_X emissions[4] sufficiently to meet the O_3 standard deadlines as NO_X plays a critical role in the creation of O_3. Since NO_X emissions also lead to the formation of $PM_{2.5}$, the NO_X reductions needed to meet the O_3 standards will likewise lead to improvement of $PM_{2.5}$ levels and attainment of $PM_{2.5}$ standards.[5] The 2022 AQMP is focused on attaining the 2015 8-hour O_3 standard of 70 parts per billion. The 2022 AQMP builds upon measures already in place from previous AQMPs and includes a variety of additional strategies, such as regulation, accelerated development of available clean technologies, incentives and other CAA measures to achieve this standard.[6]

The SCAQMD's strategy to meet the NAAQS and CAAQS distributes the responsibility for emission reductions across federal, state, and local levels and industries. The 2022 AQMP is composed of stationary and mobile source emission reductions from traditional regulatory control measures, incentive-based programs, co-benefits from climate programs, mobile source strategies, and reductions from federal sources, which include aircraft, locomotives and ocean-going vessels. These strategies are to be implemented in partnership with CARB and USEPA.

The 2022 AQMP also incorporates the transportation strategy and transportation control measures from the SCAG 2020–2045 RTP/SCS Plan.[7] SCAG is the regional planning agency for Los Angeles, Orange, Ventura, Riverside, San Bernardino, and Imperial counties and addresses regional issues relating to transportation, the economy, community development and the environment. SCAG coordinates with various air quality

---

4 NOX emissions are a precursor to the formation of both O3 and secondary PM2.5.

5 Estimates are based on the inventory and modeling results and are relative to the baseline emission levels for each attainment year (see Final 2022 AQMP for detailed discussion).

6 SCAQMD, Final 2022 AQMP, December 2022, p. ES-2.

7 SCAG, Final 2020–2045 Regional Transportation Plan/Sustainable Communities Strategy of the Southern California Association of Governments, adopted September 3, 2020.

and transportation stakeholders in Southern California to ensure compliance with the federal and state air quality requirements. Pursuant to California Health and Safety Code Section 40460, SCAG has the responsibility of preparing and approving the portions of the AQMP relating to the regional demographic projections and integrated regional land use, housing, employment, and transportation programs, measures, and strategies. SCAG is required by law to ensure that transportation activities "conform" to, and are supportive of, the goals of regional and state air quality plans to attain the NAAQS.

The RTP/SCS includes transportation programs, measures, and strategies generally designed to reduce vehicle miles traveled (VMT), which are contained in the AQMP. The SCAQMD combines its portion of the AQMP with those prepared by SCAG.[8] The RTP/SCS and Transportation Control Measures, included as Appendix IV-C of the 2022 AQMP, are based on the 2020–2045 RTP/SCS.

The 2022 AQMP forecasts the 2037 emissions inventories "with growth" based on SCAG's 2020–2045 RTP/SCS. The region is projected to see a 12-percent growth in population, a 17-percent growth in housing units, an 11-percent growth in employment, and a 5-percent growth in VMT between 2018 and 2037. Despite regional growth in the past, air quality has improved substantially over the years, primarily due to the effects of air quality control programs at the local, state, and federal levels.[9]

On April 4, 2024, SCAG adopted the 2024–2050 RTP/SCS. Similar to the 2020–2045 RTP/SCS, the 2024–2050 RTP/SCS is a long-term plan for the Southern California region that details investment in the transportation system and development in communities to meet the existing and future needs of the region through projects, investments, policies and strategies. While the 2024–2050 RTP/SCS remains focused on its core responsibilities and on the requirements of comprehensive regional transportation planning integrated with the development of a sustainable communities strategy, it also encompasses a holistic approach to programs and strategies that support success of the RTP/SCS, such as workforce development, broadband and mobility hubs. The primary goals of the 2024–2050 RTP/SCS include:

- Mobility: Build and maintain an integrated multimodal transportation network;
- Communities: Develop, connect and sustain livable and thriving communities;
- Environment: Create a healthy region for the people of today and tomorrow; and

---

8 SCAQMD, Final 2022 AQMP, December 2022, p. ES-4.

9 SCAQMD, Final 2022 AQMP, December 2022, Figure 1-4.

- Economy: Support a sustainable, efficient and productive regional economic environment that provides opportunities for all people in the region.

While the 2024–2050 RTP/SCS has been adopted by SCAG, the 2024–2050 RTP/SCS has not yet been approved by CARB. In addition, as discussed above, SCAG's 2020–2045 RTP/SCS forecasted population, housing, employment growth data were used to characterize regional growth in the 2022 AQMP.

(b) SCAQMD Air Quality Guidance Documents

The SCAQMD published the *CEQA Air Quality Handbook* (approved by the SCAQMD's Governing Board in 1993) to provide local governments with guidance for analyzing and mitigating project-specific air quality impacts.[10] The *CEQA Air Quality Handbook* provides standards, methodologies, and procedures for conducting air quality analyses. However, the SCAQMD is currently in the process of replacing the *CEQA Air Quality Handbook* with the *Air Quality Analysis Guidance Handbook*. While this process is underway, the SCAQMD has provided supplemental guidance on the SCAQMD website to be used in conjunction with the Handbook.[11]

The SCAQMD has also adopted land use planning guidelines in its *Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning*, which considers impacts to sensitive receptors from facilities that emit TAC emissions.[12] SCAQMD's siting distance recommendations are the same as those provided by CARB (e.g., a 500-foot siting distance for sensitive land uses proposed in proximity to freeways and high-traffic roads, and the same siting criteria for distribution centers and dry-cleaning facilities). The SCAQMD's document introduces land use-related policies that rely on design and distance parameters to minimize emissions and lower potential health risk. The SCAQMD's guidelines are voluntary initiatives recommended for consideration by local planning agencies.

The SCAQMD has published a guidance document called the Final Localized Significance Threshold Methodology for CEQA evaluations that is intended to provide guidance when evaluating the localized effects from mass emissions during construction or operation of a project.[13] The SCAQMD adopted additional guidance regarding $PM_{2.5}$ emissions in a document called *Final Methodology to Calculate Particulate Matter (PM)*

2.5 and PM2.5 Significance Thresholds.[14] The latter document has been incorporated by the SCAQMD into its CEQA significance thresholds and *Final Localized Significance Threshold Methodology*.

(c) SCAQMD Rules and Regulations

The SCAQMD has adopted several rules and regulations to regulate sources of air pollution in the Air Basin and to help achieve air quality standards for land use development projects, which include, but are not limited to, the following:

Regulation IV—Prohibitions: This regulation sets forth the restrictions for visible emissions, odor nuisance, fugitive dust, various air emissions, fuel contaminants, start-up/shutdown exemptions and breakdown events. The following is a list of rules that apply to the Project:

Rule 401—Visible Emissions: This rule states that a person shall not discharge into the atmosphere from any single source of emission whatsoever any air contaminant for a period or periods aggregating more than three minutes in any one hour, which is as dark or darker in shade as that designated No. 1 on the Ringelmann Chart or of such opacity as to obscure an observer's view.

Rule 402—Nuisance: This rule states that a person shall not discharge from any source whatsoever such quantities of air contaminants or other material, which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.

Rule 403—Fugitive Dust: This rule requires projects to prevent, reduce or mitigate fugitive dust emissions from a site. Rule 403 restricts visible fugitive dust to the project property line, restricts the net PM_{10} emissions to less than 50 micrograms per cubic meter ($\mu g/m^3$), and restricts the tracking out of bulk materials onto public roads. Additionally, projects must utilize one or more of the best available control measures (identified in the tables within the rule). Best available control measures may include adding freeboard to haul vehicles, covering loose material on haul vehicles, watering, using chemical stabilizers, and/or ceasing all activities. Finally, a contingency plan may be required if so determined by the USEPA.

Regulation XI—Source Specific Standards: Regulation XI sets emissions standards for specific sources. The following is a list of rules that may apply to the Project:

---

[14] SCAQMD, Final Methodology to Calculate Particulate Matter (PM) 2.5 and PM 2.5 Significance Thresholds, 2006.

Rule 1113—Architectural Coatings: This rule requires manufacturers, distributors, and end users of architectural and industrial maintenance coatings to reduce VOC emissions from the use of these coatings, primarily by placing limits on the VOC content of various coating categories.

Rule 1138—Control of Emissions from Restaurant Operations: This rule specifies PM and VOC emissions and odor control requirements for commercial cooking operations that use chain-driven charbroilers to cook meat.

Rule 1146.2—Emissions of Oxides of Nitrogen from Large Water Heaters and Small Boilers and Process Heaters: This rule requires manufacturers, distributors, retailers, refurbishers, installers, and operators of new and existing units to reduce NO_X emissions from natural gas-fired water heaters, boilers, and process heaters as defined in this rule.

Rule 1186—PM_{10} Emissions from Paved and Unpaved Roads, and Livestock Operations: This rule applies to owners and operators of paved and unpaved roads and livestock operations. The rule is intended to reduce PM_{10} emissions by requiring the cleanup of material deposited onto paved roads, use of certified street sweeping equipment, and treatment of high-use unpaved roads (see also Rule 403).

Regulation XIII—New Source Review (NSR): Regulation XIII sets requirements for preconstruction review required under both federal and state statutes for new and modified sources located in areas that do not meet the CAA standards ("non-attainment" areas). NSR applies to both individual permits and entire facilities. Any permit that has a net increase in emissions is required to apply Best Available Control Technology (BACT). Facilities with a net increase in emissions are required to offset the emission increase by use of Emission Reduction Credits (ERCs). The regulation provides for the application, eligibility, registration, use and transfer of ERCs. For low emitting facilities, the SCAQMD maintains an internal bank that can be used to provide the required offsets. In addition, certain facilities are subject to provisions that require public notice and modeling analysis to determine the downwind impact prior to permit issuance.

Regulation XIV—Toxics and Other Non-Criteria Pollutants: Regulation XIV sets requirements for new permit units, relocations, or modifications to existing permit units, which emit TACs or other non-criteria pollutants. The following is a list of rules, which may apply to the Project:

Rule 1403—Asbestos Emissions from Demolition/Renovation Activities: This rule requires owners and operators of any demolition or renovation activity and the associated disturbance of asbestos-containing materials, any asbestos storage facility, or any active waste disposal site to implement work practice requirements to limit asbestos emissions from building demolition and

renovation activities, including the removal and associated disturbance of asbestos-containing materials.

Rule 1470—Requirements for Stationary Diesel-Fueled Internal Combustion and Other Compression Ignition Engines: This rule applies to stationary compression ignition (CI) engines greater than 50 brake horsepower and sets limits on emissions and operating hours. In general, new stationary emergency standby diesel-fueled engines greater than 50 brake horsepower are not permitted to operate more than 50 hours per year for maintenance and testing.

(4) Local

(a) City of Los Angeles General Plan

(i) Air Quality Element

Local jurisdictions, such as the City, have the authority and responsibility to reduce air pollution through their land use decision-making authority. Specifically, the City is responsible for the assessment and mitigation of air emissions resulting from its land use decisions. In general, the City of Los Angeles' General Plan (including the Framework, Air Quality, Transportation Element [Mobility Plan 2035], and the Health and Wellness Element [Plan for a Healthy Los Angeles]) and the City of Los Angeles' Green New Deal contain policies and programs for the protection of the environment and health through improved air quality. These serve to provide additional critical guidance for the betterment of public health for the region and the City.

The most directly relevant of those plans, the City's General Plan Air Quality Element, was adopted on November 24, 1992, and sets forth the goals, objectives, and policies that guide the City in its implementation of its air quality improvement programs and strategies. A number of these goals, objectives, and policies are relevant to land use development and relate to traffic mobility, minimizing particulate emissions from construction activities, discouraging single-occupant vehicle trips, managing traffic congestion during peak hours, and increasing energy efficiency in City facilities and private developments.

The Air Quality Element establishes six goals:

- Good air quality in an environment of continued population growth and healthy economic structure;
- Less reliance on single-occupant vehicles with fewer commute and non-work trips;

- Efficient management of transportation facilities and system infrastructure using cost-effective system management and innovative demand-management techniques;

- Minimal impacts of existing land use patterns and future land use development on air quality by addressing the relationship between land use, transportation, and air quality;

- Energy efficiency through land use and transportation planning, the use of renewable resources and less-polluting fuels, and the implementation of conservation measures, including passive measures, such as site orientation and tree planting; and

- Citizen awareness of the linkages between personal behavior and air pollution and participation in efforts to reduce air pollution.

The City is also responsible for the implementation of transportation control measures as outlined in the AQMP. Through capital improvement programs, the City can fund infrastructure that contributes to improved air quality by requiring such improvements as bus turnouts as appropriate, installation of energy-efficient streetlights, and synchronization of traffic signals. In accordance with CEQA requirements and the CEQA review process, the City assesses the air quality impacts of new development projects, requires mitigation of potentially significant air quality impacts by conditioning discretionary permits, and monitors and enforces implementation of such mitigation measures.

(ii) Plan for a Healthy Los Angeles

The City's Health and Wellness Element, the Plan for a Healthy Los Angeles was adopted by the City Council on March 31, 2015, and amended in November 2021, lays the foundation to create healthier communities for all residents in the City. As an element of the General Plan, it provides high-level policy vision, along with measurable objectives and implementation programs, to elevate health as a priority for the City's future growth and development. With a focus on public health and safety, the Plan for a Healthy Los Angeles provides a roadmap for addressing the most basic and essential quality-of-life issues: safe neighborhoods; a clean environment (i.e., improved ambient and indoor air quality); the opportunity to thrive; and access to health services, affordable housing, and healthy and sustainably produced food.

(b) City of Los Angeles Municipal Code

In December 2022, the City approved Ordinance No. 187,714, which amends Divisions 2, 4, and 5 of Article 9 of Chapter IX of the LAMC to require all new buildings to be all-electric buildings with exceptions. The ordinance is applicable to new buildings

in which an application for a building permit was submitted after June 1, 2023. Consistent with this new ordinance, Chapter IX of the LAMC, Section 99.02.202 defines an all-electric building as:

> *A building that contains no combustion equipment, plumbing for combustion equipment, gas piping, or fuel gas serving any use including, but not limited to, space heating (including fireplaces), water heating (including pools and spas), cooking appliances (including barbeques), and clothes drying, within the building or building property lines, and instead uses electricity as the sole source of energy for all lighting, appliances and/or equipment, including, but not limited to, space heating, water heating, cooking appliances, and drying appliances.*

Chapter IX of the LAMC, Section 99.04.106.8 provides exemptions from the requirements for cooking equipment contained within kitchens in a public use area, such as restaurants, commissaries, cafeterias, and community kitchens, as long as electrical infrastructure is installed. Gas-powered process equipment in institutions, such as hospitals, industrial, and laboratories, is also exempt.

The Row DTLA Residential

Appendix AQ-2: Air Quality Methodology

- Appendix AQ-2: Air Quality Methodology

AIR QUALITY EMISSIONS METHODLOGY

The Row DTLA Residential Project

Prepared by:

Eyestone Environmental, LLC

February 2025

The Row DTLA Residential Project
Air Quality Emissions Methodology

1. Introduction

Eyestone Environmental has been retained to conduct a comprehensive criteria air pollutant emissions assessment for the Row DTLA Residential Project (the "Project"). Emissions during both construction and operation of the Project were quantified. This assessment describes the methodology used to estimate air pollutant emissions from existing and Project conditions and describes the methodology used to quantify air pollutant emission reductions from project design features and mitigation measures.

2. Air Pollutant Emissions Methodology

The Project would result in direct emissions of criteria pollutants generated by different types of emissions sources, including:[1]

- Direct Emissions:

  Construction: emissions associated with demolition of existing uses, shoring, excavation, grading, and construction-related equipment and vehicular activity;

  Area source: emissions associated with consumer products, architectural coatings, and landscape equipment;

  Energy source (building operations): emissions associated with space heating and cooling, and water heating;

  Mobile source: emissions associated with vehicles accessing the project site; and

  Stationary source: emissions associated with stationary equipment (e.g., emergency generators).

---

[1] *Direct sources of emissions include Prcject-related vehicular trips and onsite combustion of fossil fuels (e.g., natural gas, propane, gasoline, and diesel).*

a. Emission Inventories

Project-related construction and operation emissions were calculated using SCAQMD's recommended California Emissions Estimator Model (CalEEMod). CalEEMod is a statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant emissions associated with both construction and operations from a variety of land use projects. CalEEMod was developed in collaboration with the air districts of California. Data (e.g., emission factors, trip lengths, meteorology, source inventory, etc.) have been provided by the various California air districts to account for local requirements and conditions. The model is considered by the SCAQMD to be an accurate and comprehensive tool for quantifying criteria pollutant impacts from land use projects throughout California.[2]

CalEEMod utilizes widely accepted models for emission estimates combined with appropriate default data that can be used if site-specific information is not available. These models and default estimates use sources such as the USEPA AP-42 emission factors, CARB's on-road emission model (EMission FACtor model (EMFAC)) and off-road equipment emission model (Off-road Emissions Inventory Program model (OFFROAD)).

(1) Construction

Construction activities would generate emissions from off-road equipment usage, on-road vehicle travel (truck hauling, vendor deliveries, and workers commuting), architectural coating, and paving. Each of these source types is discussed in more detail below. The Project's construction emissions were calculated using the SCAQMD recommended CalEEMod (Version 2022.1). Please refer to CalEEMod construction output files for a complete listing of construction details modeled. CalEEMod default values were used for equipment and vehicle emission factors, equipment load factors and vehicle trip lengths. It should be noted that the maximum daily emissions were predicted values for the worst-case day and do not represent the emissions that would occur for every day of Project construction. The maximum daily emissions were compared to the SCAQMD daily regional numeric indicators.

(a) Emissions from Construction Equipment

The emission calculations associated with construction equipment are from off-road equipment engine use based on the equipment list and phase length. Since the majority of the off-road construction equipment used for construction projects are diesel fueled,

[2] *See www.caleemod.com.*

CalEEMod assumes all of the equipment operates on diesel fuel. Construction equipment emissions vary with engine model years in which newer equipment will emit fewer pollutants. As a conservative assumption, the CalEEMod model uses an emission rate for equipment which represents an average model year for available equipment within the Air Basin. CalEEMod calculates the exhaust emissions based on CARB OFFROAD methodology using the equation presented below.

Construction Off-Road Equipment:

$$\text{Emissions Diesel [lbs]} = (\sum_i (EF_i \times Pop_i \times AvgHP_i \times Load_i \times Activity_i$$

Where:
- EF_i = Emission factor from OFFROAD (lbs/hr)
- Pop_i = Population (quantity of same equipment)
- $AvgHP_i$ = Maximum rated average horsepower (hp)
- $Load_i$ = Load Factor (dimensionless)
- $Activity_i$ = Hours of operation (hours)
- i = Summation index

Fugitive dust emissions from use of off-road equipment were also calculated using CalEEMod based on the types of equipment used during grading activities and based on the amount of import/export from loading or unloading dirt into haul trucks. These methods have been adapted from USEPA's AP-42 method for Western Coal Mining. As recommended by SCAQMD, the fugitive dust emissions from the grading phase are calculated using the methodology described in USEPA AP-42. PM_{10} and $PM_{2.5}$ emissions from fugitive dust will be controlled by watering the construction site three times a day consistent with SCAQMD Rule 403 and were estimated to be reduced by 74 percent.

(b) Emissions from On-Road Trips

Construction generates on-road vehicle exhaust, evaporative, and dust emissions from personal vehicles for worker commuting, vendor deliveries, and trucks for soil and material hauling. These emissions are based on the number of trips and VMT along with emission factors from EMFAC. The emissions from mobile sources were calculated with the trip rates, trip lengths and emission factors for running from EMFAC as follows:

Construction On-Road Equipment:

Emissions pollutant (lbs) = VMT * EF running, pollutant

Where: VMT = vehicle miles traveled (miles)

EF running,pollutant = emission factor for running emissions (lbs/VMT)

Evaporative emissions, starting and idling emissions in CalEEMod were calculated by multiplying the number of trips times the respective emission factor for each pollutant.

(c) Emissions from Architectural Coating

VOC off-gassing emissions result from evaporation of solvents contained in surface coatings. CalEEMod calculates the VOC evaporative emissions from application of residential and non-residential surface coatings using the following equation:

Construction Architectural Coating Emissions:

Emissions Architectural Coatings (lbs) $=EF_{AC} \times F * A_{paint}$

Where: EF_{AC} = Emission Factor (lb/sf)

A_{paint} = Building Surface Area (sf)

The CalEEMod tool assumes the total surface for painting equals 2.7 times the floor square footage for residential and 2 times that for nonresidential square footage. All of the land use information provided by a metric other than square footage erewill be converted to square footage using the default conversions or user defined equivalence.

F = fraction of surface area [%].

The default values based on SCAQMD methods used in their coating rules are 75 percent for the interior surfaces and 25 percent for the exterior shell. Parking areas are based on 6-percent coverage.

The emission factor (EF) is based on the VOC content of the surface coatings and is calculated estimated using the equation below:

$EF_{AC} = C_{VOC}/454(g/lb) \times 3.785(L/gal)/180*sf)$

Where: EF = emission factor (lb/sf)

C = VOC content (g/L or gram per liter)

The emission factors for coating categories were calculated using the equation above based on default VOC content from provided by the air districts or CARB's statewide limits in CalEEMod. Architectural coating VOC emission factors are also consistent with SCAQMD Rule 1113 as discussed above.

(a) Emissions from Paving

CalEEMod estimates VOC off-gassing emissions associated with asphalt paving of parking lots using the following equation:

$Emissions_{AP}$ (lbs) = EF_{AP} x $A_{parking}$

Where: EF = emission factor (lb/acre)

A = area of the parking lot (acre)

Note: The Sacramento Metropolitan Air Quality Management District (SMAQMD) default emission factor is 2.62 lb/acre. This value is used as the default emission factor within CalEEMod

(2) Operation

Similar to construction, the SCAQMD-recommended CalEEMod was used to calculate potential emissions generated by the Project, including area source, energy sources (electricity and natural gas), mobile source, stationary sources (emergency generator), solid waste generation and disposal, water usage/wastewater generation, and refrigeration.

(3) Area Source Emissions

Area source emissions were calculated using the CalEEMod emissions inventory model, which includes consumer products, architectural coatings, and landscape maintenance equipment. Pollutant emissions generated by the Project were calculated using CalEEMod defaults, based upon the land uses that will be included in each project.

Consumer products are chemically formulated products used by household and institutional consumers, including, but not limited to, detergents; cleaning compounds; polishes; floor finishes; cosmetics; personal care products; home, lawn, and garden products; disinfectants; sanitizers; aerosol paints; and automotive specialty products; but

does not include other paint products, furniture coatings, or architectural coatings. SCAQMD did an evaluation of consumer product use compared to the total square footage of buildings using data from CARB consumer product Emission Inventory. To calculate the VOC emissions from consumer product use, the following equation was used in CalEEMod:

Emissions Consumer Products (lbs) = EF_{CP} x Building Area

Where:

EF_{CP} = pounds of VOC per building square foot

The factor is 1.98 x 10^{-5} lbs/sf for SCAQMD areas.

Building Area = the total square footage of all buildings including residential square footage

VOC off-gassing emissions result from evaporation of solvents contained in surface coatings such as in paints and primers. The operational emission methodology from architecture coating is the same as the construction methodology discussed above. All land use buildings are assumed to be repainted at a rate of 10 percent of area per year. This is based on the assumptions used by SCAQMD.

The combustion of fossil fuels to operate landscape equipment such as lawnmowers and trimmers, results in pollutant emissions. The emissions occur on-site and are considered a direct source of pollutant emissions. The emissions for landscaping equipment are based on the size of the land uses, the pollutant emission factors for fuel combustion. Pollutant emissions from landscaping equipment are generally calculated in CalEEMod as follows:

Landscaping Equipment:

Landscaping Equipment Emissions [lbs] = (Σ_i (Units × EF_{LE} × A_{LE})$_i$)

Where: Units = Number of land use units (same land use type) [1,000 sf]

EF_{LE} = Emission factor [grams (g)/1,000 sfday]

i = Summation index

Note: For residential land uses, emission factors are specified in units of dwelling units (DU) instead of 1,000 sf.

(4) Energy Emissions (Natural Gas)

Pollutant emissions are emitted as a result of activities in buildings when electricity and natural gas are used as energy sources. Combustion of any type of fuel emits pollutant emissions directly into the atmosphere; when this occurs in a building, it is a direct emission source associated with that building. Pollutant emissions are also emitted during the generation of electricity from fossil fuels. When electricity is used in a building, the electricity generation typically takes place off-site at the power plant; electricity use in a building generally causes emissions in an indirect manner.

Energy demand emissions were calculated using the CalEEMod emissions inventory model. Energy use in buildings is divided into energy consumed by the built environment and energy consumed by uses that are independent of the construction of the building such as in plug-in appliances. CalEEMod calculates energy use from systems covered by Title 24 Building Energy Efficiency Standards (e.g., heating, ventilation, and air conditioning [HVAC] system, water heating system, and lighting system); energy use from lighting; and energy use from office equipment, appliances, plug-ins, and other sources not covered by Title 24 or lighting.

CalEEMod energy demand is based on the California Energy Commission (CEC) sponsored California Commercial End Use Survey (CEUS) study.[3] The data is specific for Electricity Demand Forecast Zones (EDFZ) and, therefore, EDFZ 16 was selected for the Project Site based on the Project's address. CalEEMod includes 2019 Title 24 Energy Efficiency Standards when calculating project energy usage.

(a) Natural Gas

The direct source emissions associated with natural gas combustion are based on the size of the land uses and the natural gas combustion factors for the land uses in units of million British thermal units (MMBtu). Natural gas emissions are calculated in CalEEMod as follows:

[3] *2019 consumption estimates from the CEC's (2020, 2021) 2018–2030 Uncalibrated Commercial Sector Forecast (Commercial Forecast) and the RASS (refer to Table G-26) of Appendix G in CalEEMod User's Guide, 2022.*

Natural Gas:

Natural Gas Emissions (lbs) = (Σ_I (Units × D_{NG} × EF_{NG})$_I$)

Where: Units = Number of land use units (same land use type) [1,000 sf]

D_{NG} = Natural Gas combustion factor [MMBtu/1,000 sf]

EF_{NG} = Natural Gas combustion factor [pounds/MMBtu]

I = Summation index

Note: For residential land uses, emission factors are specified in units of dwelling units (DU) instead of 1,000 sf.

(b) City of Los Angeles All-Electric Ordinance

The Project would be required to comply with the City of LA's All-Electric ordinance which does not allow installation of natural gas-powered equipment (stoves, water heaters, space heating) for new construction with some exceptions. Restaurant uses would be exempt from this ordinance and be allowed to consume natural gas for cooking purposes. While this would decrease the natural gas usage for the Project, electricity usage would increase as a result.

The California Energy Commission (CEC) had conducted various energy surveys to develop energy consumption estimates for electric and natural gas end uses. Data from these surveys was used to calculate the equivalent electricity usage when switching from a natural gas end use, such as cooking, water heating and space heating.[4] As mentioned above, restaurant cooking uses are exempt from the All-Electric ordinance and were assumed to be powered by natural gas.

(5) Mobile Source Emissions

Mobile-source emissions were calculated using the CalEEMod emissions inventory model. CalEEMod calculates the emissions associated with on-road mobile sources associated with residents, employees, visitors, and delivery vehicles visiting the Project Site based on the number of daily trips generated and vehicle miles traveled (VMT). The Traffic Study prepared by Gibson had calculated Project VMT which was entered into CalEEMod in calculating Project mobile source emissions.

---

[4] *CAPCOA Handbook, Table E-15.1 and Table E-15.2*

Modeling was also conducted using the Los Angeles County vehicle fleet mix for all vehicle types as provided in EMFAC2021.

Mobile source emissions were generally calculated in CalEEMod as follows:

Mobile:

Mobile Emissions [lbs] = (Σ_i (Units × ADT x D_{TRIP} × EF_i)

Where: Units = Number of vehicles (same vehicle model year and class)

ADT = Average daily trip rate [trips/day]

D_{TRIP} = Trip distance [miles/trip]

EF = Pollutant emission factor [pounds per mile]

i = Summation index

Note: For residential land uses, emission factors are specified in units of dwelling units (DU) instead of 1,000 sf.

Mobile source operational emissions were calculated based on the Project VMT estimates provided by the Gibson Transportation Consulting, Inc.[5] The Los Angeles Department of Transportation (LADOT) VMT Calculator was used.

Previously, trip generation for land uses was calculated based on survey data collected by the Institute of Transportation Engineers (ITE). However, these ITE trip generation rates were based on data collected at suburban, single-use, free standing sites, which may not be representative of urban mixed-use environments. Beginning in 2019, the USEPA has sponsored a study to collect travel survey data from mixed-use developments in order provide a more representative trip generation rate for multi-use sites. Results of the USEPA survey indicate that trip generation and VMT are affected by factors such as resident and job density, availability of transit, and accessibility of biking and walking paths. Based on these factors, the USEPA has developed equations known as the EPA Mixed-Use Development (MXD) model to calculate trip reductions for multi-use developments.[6] The LADOT VMT Calculator incorporates the USEPA MXD model and accounts for project

features such as increased density and proximity to transit, which would reduce VMT and associated fuel usage in comparison to free-standing sites.

The Project design includes characteristics that would reduce trips and VMT as compared to a standard project within the air basin as measured by the air quality model (CalEEMod). While these Project characteristics primarily reduce greenhouse gas emissions, they would also reduce criteria air pollutants discussed herein. These relative reductions in vehicle trips and VMT from a standard project within the air basin help quantify the criteria air pollutant emissions reductions achieved by locating the Project in any infill, HQTA area that promotes alternative modes of transportation.

(6) Stationary Source (Emergency Generator Emissions)

Emissions of GHGs associated with use of emergency generators were calculated using CalEEMod, in which emission factors are based on Table 3.4-1 (Gaseous Emission Factors for Large Stationary Diesel Engines) from EPA's AP-42: Compilation of Air Pollutant Emission Factors. The emissions are based on the horsepower rating of the diesel generator and the number of hours operated per year for testing purposes. Annual emergency generator GHG emissions in units of $MTCO_2e$ were calculated as follows:

Emergency Generator:

Emissions [lbs] = (Total HP x LF x HR × EF)

Where: Total HP = Total horsepower of emergency generators (Hp)
LF = Load Factor (CalEEMod default of 0.73)
HR = Hours Operated per Year
EF = AP-42 Emission Factor of 1.16 lb/hp-hr)

DTLA ROW - South Lot Building B

Air Quality Analysis Assumptions

9/20/2024

The following information describes the quantity of construction equipment projected during the various stages of construction for a single phased project.

Construction Details	Start Date	End Date	Construction Duration (Months)	Work Days Per Week	Total Work Days (calculated)	Max Daily Employees	Avg Daily Employees	Max Daily Hauls	Avg Daily Hauls (calculated)	Total Hauls (calculated)	Max Daily Deliveries	Avg Daily Deliveries
Overall Duration	6/2/2026	6/3/2028	24									
Demolition/Utility Work	6/2/2026	7/28/2026	2	5	43	20	10	10	1	43	2	2
Grading/Shoring/Excavation	7/29/2026	9/18/2026	2	5	45	20	20	100	44	2,000	4	4
Building Foundation	9/19/2026	4/2/2027	6	5	141	80	60				80	6
Building Construction	9/19/2027	6/3/2028	19	5	320	120	80				16	4
Site Work/Landscape	4/20/2028	6/3/2028	2	5	130	40	20				10	4
Site Average												
Demolition Quantities			(calculated)									
Building Square Footage (SF)		0	0	cy	NOTE: embedded formulas are not clear. No existing bldgs to demolish. Parking lot to be demolished consists of asphalt and concrete 46,500 sf x 4" asphalt = (46,500 sf x 4"/12=15,500 cu. Ft. = 568 cu. yds.							
Parking (SF)		46,500	568	cy								
Parking (spaces)		0	0	cy								
Import/Export Quantities during Grading	**(CY)**											
Import	0											
Export	42,000											

Note: If a assumed that demolition and import/export would be in cy load trucks.

Landfill Location	One-way Dist. (miles)
Azusa, CA	25
Irwindale, CA	20
Irwindale, CA	50
Simi Valley, CA	40

On-site Travel	Paved	Unpaved	
Demolition/Site Prep	500	1000	Feet
Grading	500	1000	Feet

Note: If offsite staging areas are used, then please include the distance within the haul route.

CO Hotspots

CO Hotspots Analysis - Maximum Impacted Intersection

	Alameda Street and 7th Street	
	Future with Project	
Direction	AM	PM
Total Intersection Volume	6203	7059
Max Daily Trips[a]	105,853	118,639
Caltrans K Factor (%)[b]	5.86%	5.95%

[a] Maximum Daily Trips are based on the Caltrans K Factor which is the percentage of the AADT in both directions during the peak hour.

[b] Caltrans K Factor obtained from 101 Freeway Monitoring Station, Postmile 0.5 which is closest to the Project site. Please refer to: https://dot.ca.gov/programs/traffic-operations/census

CITY OF LOS ANGELES VMT CALCULATOR Version 1.5

Project Screening Criteria: Is this project required to conduct a vehicle miles traveled analysis?

Project Information

Project: Residential at ROW DTLA

Scenario: Full Build

Address: 747 S ALAMEDA ST. 90021

Is the project replacing an existing number of residential units with a smaller number of residential units AND is located within one-half mile of a fixed-rail or fixed-guideway transit station?

● Yes ● No

Existing Land Use

Land Use Type	Value	Unit
Housing | Single Family		DU

Click here to add a single custom land use type (will be included in the above list)

Proposed Project Land Use

Land Use Type	Value	Unit
Retail | High-Turnover Sit-Down Restaurant	6.547	ksf
Housing | Multi-Family	886	DU
Housing | Affordable Housing - Family	114	DU
Retail | High-Turnover Sit-Down Restaurant	6.547	ksf

Click here to add a single custom land use type (will be included in the above list)

Project Screening Summary

Existing Land Use	Proposed Project
0 Daily Vehicle Trips	4,676 Daily Vehicle Trips
0 Daily VMT	30,560 Daily VMT

Tier 1 Screening Criteria

Project will have less residential units compared to existing residential units & is within one-half mile of a fixed-rail station. ☐

Tier 2 Screening Criteria

The net increase in daily trips < 250 trips	4,676 Net Daily Trips
The net increase in daily VMT ≤ 0	30,560 Net Daily VMT
The proposed project consists of only retail land uses ≤ 50,000 square feet total.	6.547 ksf

The proposed project is required to perform VMT analysis.

Measuring the Miles

DTLA Row - Construction South Lot Building A Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

3. Construction Emissions Details

3.1. Demolition/Utility Relocation (2027) - Unmitigated

3.3. Grading/Shoring/Excavation (2027) - Unmitigated

3.5. Building Foundation (2027) - Unmitigated

3.7. Building Foundation (2028) - Unmitigated

3.9. Building Construction (2028) - Unmitigated

3.11. Building Construction (2029) - Unmitigated

3.13. Paving (2029) - Unmitigated

3.15. Architectural Coating (2029) - Unmitigated

4. Operations Emissions Details

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

6.2. Initial Climate Risk Scores

6.3. Adjusted Climate Risk Scores

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	DTLA Row - Construction South Lot Building A
Construction Start Date	3/2/2027
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	0.50
Precipitation (days)	18.4
Location	34.032905802980835, -118.23935798232272
County	Los Angeles-South Coast
City	Los Angeles
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4066
EDFZ	16
Electric Utility	Los Angeles Department of Water & Power
Gas Utility	Southern California Gas
App Version	2022.1.1.29

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Apartments Mid Rise	410	Dwelling Unit	1.83	336,501	13,837	0.00	1,214	—

High Turnover (Sit Down Restaurant)	1.12	1000sqft	0.00	1,119	0.00	0.00	—	—
Recreational Swimming Pool	0.49	1000sqft	0.00	486	0.00	0.00	—	—
Enclosed Parking with Elevator	449	Space	4.04	179,600	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Un/Mit.	ROG	NOx	CO	SO2	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	CO2e
Daily, Summer (Max)	—	—	—	—	—	—	—	—	—	—	—
Unmit.	14.4	31.4	53.7	0.19	0.37	18.6	18.9	0.37	2.97	3.34	27,164
Daily, Winter (Max)	—	—	—	—	—	—	—	—	—	—	—

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Control Strategies Applied	PM10 Reduction	PM2.5 Reduction
Water unpaved roads twice daily	55%	55%
Limit vehicle speeds on unpaved roads to 25 mph	44%	44%

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	681,415	227,138	9,600	1,440	10,562

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (Building Square Footage)	Acres Paved (acres)

Demolition/Utility Relocation	0.00	0.00	0.00	0.00	—
Grading/Shoring/Excavation	0.00	73,440	0.00	0.00	—
Paving	0.00	0.00	0.00	0.00	4.04

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	3	74%	74%
Water Demolished Area	2	36%	36%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Apartments Mid Rise	—	0%
High Turnover (Sit Down Restaurant)	0.00	0%
Recreational Swimming Pool	0.00	0%
Enclosed Parking with Elevator	4.04	100%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2027	635	406	0.05	0.01
2028	1,270	386	0.05	0.01
2029	635	365	0.05	0.01

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	9.52	annual days of extreme heat
Extreme Precipitation	6.15	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	50.5
AQ-PM	89.2
AQ-DPM	95.5
Drinking Water	92.5
Lead Risk Housing	71.6
Pesticides	0.00
Toxic Releases	82.2
Traffic	85.9
Effect Indicators	—
CleanUp Sites	97.2
Groundwater	78.1
Haz Waste Facilities/Generators	98.8
Impaired Water Bodies	66.7
Solid Waste	96.0
Sensitive Population	—
Asthma	97.7

Cardio-vascular	65.1
Low Birth Weights	71.6
Socioeconomic Factor Indicators	—
Education	74.4
Housing	68.5
Linguistic	91.8
Poverty	75.4
Unemployment	79.7

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	10.5350956
Employed	49.30065443
Median HI	4.273065572
Education	—
Bachelor's or higher	63.26190171
High school enrollment	100
Preschool enrollment	95.7141024
Transportation	—
Auto Access	1.180546644
Active commuting	97.42076222
Social	—
2-parent households	4.119081227

2016 Voting	5.0

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	100
Healthy Places Index Score for Project Location (b)	14.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes

Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Control Strategies Applied	PM10 Reduction	PM2.5 Reduction
Water unpaved roads twice daily	55%	55%
Limit vehicle speeds on unpaved roads to 25 mph	44%	44%

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	369,775	123,258	3,599	400	4,799

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (Building Square Footage)	Acres Paved (acres)
Demolition/Utility Relocation	0.00	0.00	0.00	0.00	—
Grading/Shoring/Excavation	0.00	42,960	0.00	0.00	—

Paving	0.00	0.00	0.00	0.00	1.84

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	3	74%	74%
Water Demolished Area	2	36%	36%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Apartments Mid Rise	—	0%
Recreational Swimming Pool	0.00	0%
Enclosed Parking with Elevator	1.84	100%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2027	0.00	690	0.05	0.01
2028	0.00	690	0.05	0.01
2026	0.00	690	0.05	0.01

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	9.52	annual days of extreme heat
Extreme Precipitation	6.15	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	50.5
AQ-PM	89.2
AQ-DPM	95.5
Drinking Water	92.5
Lead Risk Housing	71.6
Pesticides	0.00
Toxic Releases	82.2
Traffic	85.9
Effect Indicators	—
CleanUp Sites	97.2
Groundwater	78.1
Haz Waste Facilities/Generators	98.8
Impaired Water Bodies	66.7
Solid Waste	96.0
Sensitive Population	—
Asthma	97.7
Cardio-vascular	65.1
Low Birth Weights	71.6

Socioeconomic Factor Indicators	—
Education	74.4
Housing	68.5
Linguistic	91.8
Poverty	75.4
Unemployment	79.7

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	10.5350956
Employed	49.30065443
Median HI	4.273065572
Education	—
Bachelor's or higher	63.26190171
High school enrollment	100
Preschool enrollment	95.7141024
Transportation	—
Auto Access	1.180546644

2016 Voting	5.0

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	100
Healthy Places Index Score for Project Location (b)	14.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Control Strategies Applied	PM10 Reduction	PM2.5 Reduction
Water unpaved roads twice daily	55%	55%
Limit vehicle speeds on unpaved roads to 25 mph	44%	44%

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	645,216	215,072	15,887	3,575	10,326

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (Building Square Footage)	Acres Paved (acres)

Demolition	0.00	0.00	0.00	1,268	—
Grading & Utilities	0.00	36,210	0.00	0.00	—
Paving	0.00	0.00	0.00	0.00	3.95

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	3	74%	74%
Water Demolished Area	2	36%	36%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Apartments Mid Rise	—	0%
High Turnover (Sit Down Restaurant)	0.00	0%
Recreational Swimming Pool	0.00	0%
Enclosed Parking with Elevator	3.95	100%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2030	635	345	0.05	0.01
2031	635	325	0.05	0.01
2032	0.00	304	0.05	0.01

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	9.52	annual days of extreme heat
Extreme Precipitation	6.15	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	50.5
AQ-PM	89.2
AQ-DPM	95.5
Drinking Water	92.5
Lead Risk Housing	71.6
Pesticides	0.00
Toxic Releases	82.2
Traffic	85.9
Effect Indicators	—
CleanUp Sites	97.2
Groundwater	78.1
Haz Waste Facilities/Generators	98.8
Impaired Water Bodies	66.7
Solid Waste	96.0
Sensitive Population	—
Asthma	97.7

Cardio-vascular	65.1
Low Birth Weights	71.6
Socioeconomic Factor Indicators	—
Education	74.4
Housing	68.5
Linguistic	91.8
Poverty	75.4
Unemployment	79.7

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	10.5350956
Employed	49.30065443
Median HI	4.273065572
Education	—
Bachelor's or higher	63.26190171
High school enrollment	100
Preschool enrollment	95.7141024
Transportation	—

2016 Voting	5.0

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	100
Healthy Places Index Score for Project Location (b)	14.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes

Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Control Strategies Applied	PM10 Reduction	PM2.5 Reduction
Water unpaved roads twice daily	55%	55%
Limit vehicle speeds on unpaved roads to 25 mph	44%	44%

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	681,415	227,138	9,600	1,440	10,562

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (Building Square Footage)	Acres Paved (acres)

Demolition/Utility Relocation	0.00	0.00	0.00	0.00	—
Grading/Shoring/Excavation	0.00	73,440	0.00	0.00	—
Paving	0.00	0.00	0.00	0.00	4.04

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	3	74%	74%
Water Demolished Area	2	36%	36%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Apartments Mid Rise	—	0%
High Turnover (Sit Down Restaurant)	0.00	0%
Recreational Swimming Pool	0.00	0%
Enclosed Parking with Elevator	4.04	100%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2027	635	406	0.05	0.01
2028	1,270	386	0.05	0.01
2029	635	365	0.05	0.01

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	9.52	annual days of extreme heat
Extreme Precipitation	6.15	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	50.5
AQ-PM	89.2
AQ-DPM	95.5
Drinking Water	92.5
Lead Risk Housing	71.6
Pesticides	0.00
Toxic Releases	82.2
Traffic	85.9
Effect Indicators	—
CleanUp Sites	97.2
Groundwater	78.1
Haz Waste Facilities/Generators	98.8
Impaired Water Bodies	66.7
Solid Waste	96.0
Sensitive Population	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	100
Healthy Places Index Score for Project Location (b)	14.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes

Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

Screen	Justification
Construction: Construction Phases	see construction assumptions
Construction: Off-Road Equipment	see construction assumptions
Construction: Trips and VMT	see construction assumptions
Construction: On-Road Fugitive Dust	see construction assumptions
Construction: Electricity	Carbon intensity for construction years
Land Use	Project Specific

DTLA Row - Construction Onsite South Lot Building B Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

3. Construction Emissions Details

3.1. Demolition/Utility Relocation (2026) - Unmitigated

3.3. Grading/Shoring/Excavation (2026) - Unmitigated

3.5. Building Foundation (2026) - Unmitigated

3.7. Building Foundation (2027) - Unmitigated

3.9. Building Construction (2027) - Unmitigated

3.11. Building Construction (2028) - Unmitigated

3.13. Paving (2028) - Unmitigated

3.15. Architectural Coating (2028) - Unmitigated

4. Operations Emissions Details

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

6.2. Initial Climate Risk Scores

6.3. Adjusted Climate Risk Scores

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	DTLA Row - Construction Onsite South Lot Building B
Construction Start Date	6/2/2026
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	0.50
Precipitation (days)	18.4
Location	34.032905802980835, -118.23935798232272
County	Los Angeles-South Coast
City	Los Angeles
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4066
EDFZ	16
Electric Utility	Los Angeles Department of Water & Power
Gas Utility	Southern California Gas
App Version	2022.1.1.29

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Apartments Mid Rise	214	Dwelling Unit	1.01	182,605	6,957	0.00	633	—

Recreational Swimming Pool	0.40	1000sqft	0.00	397	0.00	0.00	—	—
Enclosed Parking with Elevator	204	Space	1.84	81,600	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Un/Mit.	ROG	NOx	CO	SO2	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	CO2e
Daily, Summer (Max)	—	—	—	—	—	—	—	—	—	—	—
Unmit.	8.16	12.5	37.4	0.05	0.15	12.8	13.0	0.14	1.28	1.43	5,536
Daily, Winter (Max)	—	—	—	—	—	—	—	—	—	—	—
Unmit.	8.16	9.98	29.9	0.05	0.13	0.00	0.13	0.12	0.00	0.12	4,638
Average Daily (Max)	—	—	—	—	—	—	—	—	—	—	—
Unmit.	3.42	3.28	10.3	0.02	0.04	1.52	1.57	0.04	0.15	0.19	1,569

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Control Strategies Applied	PM10 Reduction	PM2.5 Reduction
Water unpaved roads twice daily	55%	55%
Limit vehicle speeds on unpaved roads to 25 mph	44%	44%

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	369,775	123,258	3,599	400	4,799

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (Building Square Footage)	Acres Paved (acres)
Demolition/Utility Relocation	0.00	0.00	0.00	0.00	—
Grading/Shoring/Excavation	0.00	42,960	0.00	0.00	—

Paving	0.00	0.00	0.00	0.00	1.84

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	3	74%	74%
Water Demolished Area	2	36%	36%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Apartments Mid Rise	—	0%
Recreational Swimming Pool	0.00	0%
Enclosed Parking with Elevator	1.84	100%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2027	0.00	690	0.05	0.01
2028	0.00	690	0.05	0.01
2026	0.00	690	0.05	0.01

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	9.52	annual days of extreme heat
Extreme Precipitation	6.15	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	50.5
AQ-PM	89.2
AQ-DPM	95.5
Drinking Water	92.5
Lead Risk Housing	71.6
Pesticides	0.00
Toxic Releases	82.2
Traffic	85.9
Effect Indicators	—
CleanUp Sites	97.2
Groundwater	78.1
Haz Waste Facilities/Generators	98.8
Impaired Water Bodies	66.7
Solid Waste	96.0
Sensitive Population	—
Asthma	97.7
Cardio-vascular	65.1
Low Birth Weights	71.6

Socioeconomic Factor Indicators	—
Education	74.4
Housing	68.5
Linguistic	91.8
Poverty	75.4
Unemployment	79.7

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	10.5350956
Employed	49.30065443
Median HI	4.273065572
Education	—
Bachelor's or higher	63.26190171
High school enrollment	100
Preschool enrollment	95.7141024
Transportation	—
Auto Access	1.180546644

Other Decision Support	—
2016 Voting	5.0

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	100
Healthy Places Index Score for Project Location (b)	14.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Control Strategies Applied	PM10 Reduction	PM2.5 Reduction
Water unpaved roads twice daily	55%	55%
Limit vehicle speeds on unpaved roads to 25 mph	44%	44%

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	645,218	215,073	15,887	3,575	10,326

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (Building Square Footage)	Acres Paved (acres)

Demolition	0.00	0.00	0.00	1,268	—
Grading & Utilities	0.00	36,210	0.00	0.00	—
Paving	0.00	0.00	0.00	0.00	3.95

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	3	74%	74%
Water Demolished Area	2	36%	36%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Apartments Mid Rise	—	0%
High Turnover (Sit Down Restaurant)	0.00	0%
Recreational Swimming Pool	0.00	0%
Enclosed Parking with Elevator	3.95	100%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2030	635	345	0.05	0.01
2031	635	325	0.05	0.01
2032	0.00	304	0.05	0.01

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	9.52	annual days of extreme heat
Extreme Precipitation	6.15	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	50.5
AQ-PM	89.2
AQ-DPM	95.5
Drinking Water	92.5
Lead Risk Housing	71.6
Pesticides	0.00
Toxic Releases	82.2
Traffic	85.9
Effect Indicators	—
CleanUp Sites	97.2
Groundwater	78.1
Haz Waste Facilities/Generators	98.8
Impaired Water Bodies	66.7
Solid Waste	96.0
Sensitive Population	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	100
Healthy Places Index Score for Project Location (b)	14.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes

Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

Mobile source emissions results are presented in Sections 2.6. No further detailed breakdown of emissions is available.

4.1.2. Mitigated

Mobile source emissions results are presented in Sections 2.5. No further detailed breakdown of emissions is available.

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Land Use	ROG	NOx	CO	SO2	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	CO2e
Daily, Summer (Max)	—	—	—	—	—	—	—	—	—	—	—

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	9.52	annual days of extreme heat
Extreme Precipitation	6.15	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from prcjected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from prcjected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	50.5
AQ-PM	89.2
AQ-DPM	95.5
Drinking Water	92.5
Lead Risk Housing	71.6
Pesticides	0.00
Toxic Releases	82.2
Traffic	85.9
Effect Indicators	—
CleanUp Sites	97.2
Groundwater	78.1
Haz Waste Facilities/Generators	98.8
Impaired Water Bodies	66.7
Solid Waste	96.0
Sensitive Population	—
Asthma	97.7
Cardio-vascular	65.1
Low Birth Weights	71.6
Socioeconomic Factor Indicators	—

Education	74.4
Housing	68.5
Linguistic	91.8
Poverty	75.4
Unemployment	79.7

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	10.5350956
Employed	49.30065443
Median HI	4.273065572
Education	—

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

Mobile source emissions results are presented in Sections 2.6. No further detailed breakdown of emissions is available.

4.1.2. Mitigated

Mobile source emissions results are presented in Sections 2.5. No further detailed breakdown of emissions is available.

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	9.52	annual days of extreme heat
Extreme Precipitation	6.15	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from prcjected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from prcjected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	50.5
AQ-PM	89.2
AQ-DPM	95.5
Drinking Water	92.5
Lead Risk Housing	71.6
Pesticides	0.00
Toxic Releases	82.2
Traffic	85.9
Effect Indicators	—
CleanUp Sites	97.2
Groundwater	78.1
Haz Waste Facilities/Generators	98.8
Impaired Water Bodies	66.7
Solid Waste	96.0
Sensitive Population	—
Asthma	97.7
Cardio-vascular	65.1
Low Birth Weights	71.6
Socioeconomic Factor Indicators	—

Education	74.4
Housing	68.5
Linguistic	91.8
Poverty	75.4
Unemployment	79.7

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	10.5350956
Employed	49.30065443
Median HI	4.273065572
Education	—
Bachelor's or higher	63.26190171

2016 Voting	5.0

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	100
Healthy Places Index Score for Project Location (b)	14.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Paving	0.00	0.00	0.00	0.00	4.04

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	3	74%	74%
Water Demolished Area	2	36%	36%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Apartments Mid Rise	—	0%
High Turnover (Sit Down Restaurant)	0.00	0%
Recreational Swimming Pool	0.00	0%
Enclosed Parking with Elevator	4.04	100%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2027	635	406	0.05	0.01
2028	1,270	386	0.05	0.01
2029	635	365	0.05	0.01

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	9.52	annual days of extreme heat
Extreme Precipitation	6.15	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	50.5
AQ-PM	89.2
AQ-DPM	95.5
Drinking Water	92.5
Lead Risk Housing	71.6
Pesticides	0.00
Toxic Releases	82.2
Traffic	85.9
Effect Indicators	—
CleanUp Sites	97.2
Groundwater	78.1
Haz Waste Facilities/Generators	98.8
Impaired Water Bodies	66.7
Solid Waste	96.0
Sensitive Population	—
Asthma	97.7

Cardio-vascular	65.1
Low Birth Weights	71.6
Socioeconomic Factor Indicators	—
Education	74.4
Housing	68.5
Linguistic	91.8
Poverty	75.4
Unemployment	79.7

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	10.5350956
Employed	49.30065443
Median HI	4.273065572
Education	—
Bachelor's or higher	63.26190171
High school enrollment	100
Preschool enrollment	95.7141024
Transportation	—
Auto Access	1.180546644
Active commuting	97.42076222
Social	—
2-parent households	4.119081227
Voting	13.0373412
Neighborhood	—
Alcohol availability	9.5983575

Park access	81.35506224

2016 Voting	5.0

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	100
Healthy Places Index Score for Project Location (b)	14.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes

Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Control Strategies Applied	PM10 Reduction	PM2.5 Reduction
Water unpaved roads twice daily	55%	55%
Limit vehicle speeds on unpaved roads to 25 mph	44%	44%

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	369,775	123,258	3,599	400	4,799

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (Building Square Footage)	Acres Paved (acres)
Demolition/Utility Relocation	0.00	0.00	0.00	0.00	—
Grading/Shoring/Excavation	0.00	42,960	0.00	0.00	—

Paving	0.00	0.00	0.00	0.00	1.84

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	3	74%	74%
Water Demolished Area	2	36%	36%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Apartments Mid Rise	—	0%
Recreational Swimming Pool	0.00	0%
Enclosed Parking with Elevator	1.84	100%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2027	0.00	690	0.05	0.01
2028	0.00	690	0.05	0.01
2026	0.00	690	0.05	0.01

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	9.52	annual days of extreme heat
Extreme Precipitation	6.15	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	50.5
AQ-PM	89.2
AQ-DPM	95.5
Drinking Water	92.5
Lead Risk Housing	71.6
Pesticides	0.00
Toxic Releases	82.2
Traffic	85.9
Effect Indicators	—
CleanUp Sites	97.2
Groundwater	78.1
Haz Waste Facilities/Generators	98.8
Impaired Water Bodies	66.7
Solid Waste	96.0
Sensitive Population	—
Asthma	97.7
Cardio-vascular	65.1
Low Birth Weights	71.6

Socioeconomic Factor Indicators	—
Education	74.4
Housing	68.5
Linguistic	91.8
Poverty	75.4
Unemployment	79.7

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	10.5350956
Employed	49.30065443
Median HI	4.273065572
Education	—
Bachelor's or higher	63.26190171
High school enrollment	100
Preschool enrollment	95.7141024
Transportation	—

2016 Voting	5.0

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	100
Healthy Places Index Score for Project Location (b)	14.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Construction: Construction Phases	see construction assumptions
Construction: Off-Road Equipment	see construction assumptions
Construction: Trips and VMT	see construction assumptions
Construction: On-Road Fugitive Dust	see construction assumptions
Construction: Electricity	Carbon intensity for construction years
Land Use	Project Specific

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	DTLA Row - Construction North Lot
Construction Start Date	6/3/2030
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	0.50
Precipitation (days)	18.4
Location	34.03415645231733, -118.23915432245305
County	Los Angeles-South Coast
City	Los Angeles
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4066
EDFZ	16
Electric Utility	Los Angeles Department of Water & Power
Gas Utility	Southern California Gas
App Version	2022.1.1.30

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Apartments Mid Rise	376	Dwelling Unit	1.97	318,625	10,736	0.00	1,113	—

High Turnover (Sit Down Restaurant)	5.43	1000sqft	0.00	5,428	0.00	—	—	—
Recreational Swimming Pool	0.38	1000sqft	0.00	376	0.00	—	—	—
Enclosed Parking with Elevator	439	Space	3.95	175,600	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Un/Mit.	ROG	NOx	CO	SO2	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	CO2e

Interior	Onsite truck	0.00	—	HHDT

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Control Strategies Applied	PM10 Reduction	PM2.5 Reduction
Water unpaved roads twice daily	55%	55%
Limit vehicle speeds on unpaved roads to 25 mph	44%	44%

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	645,216	215,072	15,887	3,575	10,326

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (Building Square Footage)	Acres Paved (acres)

Demolition	0.00	0.00	0.00	1,268	—
Grading & Utilities	0.00	36,210	0.00	0.00	—
Paving	0.00	0.00	0.00	0.00	3.95

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	3	74%	74%
Water Demolished Area	2	36%	36%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Apartments Mid Rise	—	0%
High Turnover (Sit Down Restaurant)	0.00	0%
Recreational Swimming Pool	0.00	0%
Enclosed Parking with Elevator	3.95	100%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2030	635	345	0.05	0.01
2031	635	325	0.05	0.01
2032	0.00	304	0.05	0.01

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	9.52	annual days of extreme heat
Extreme Precipitation	6.15	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	50.5
AQ-PM	89.2
AQ-DPM	95.5
Drinking Water	92.5
Lead Risk Housing	71.6
Pesticides	0.00
Toxic Releases	82.2
Traffic	85.9
Effect Indicators	—
CleanUp Sites	97.2
Groundwater	78.1
Haz Waste Facilities/Generators	98.8
Impaired Water Bodies	66.7
Solid Waste	96.0
Sensitive Population	—
Asthma	97.7

Cardio-vascular	65.1
Low Birth Weights	71.6
Socioeconomic Factor Indicators	—
Education	74.4
Housing	68.5
Linguistic	91.8
Poverty	75.4
Unemployment	79.7

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	10.5350956
Employed	49.30065443
Median HI	4.273065572
Education	—
Bachelor's or higher	63.26190171

2016 Voting	5.0

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	100
Healthy Places Index Score for Project Location (b)	14.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes

Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	9.52	annual days of extreme heat
Extreme Precipitation	6.15	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	50.5
AQ-PM	89.2
AQ-DPM	95.5
Drinking Water	92.5
Lead Risk Housing	71.6
Pesticides	0.00
Toxic Releases	82.2
Traffic	85.9
Effect Indicators	—
CleanUp Sites	97.2
Groundwater	78.1
Haz Waste Facilities/Generators	98.8
Impaired Water Bodies	66.7
Solid Waste	96.0
Sensitive Population	—
Asthma	97.7

Cardio-vascular	65.1
Low Birth Weights	71.6
Socioeconomic Factor Indicators	—
Education	74.4
Housing	68.5
Linguistic	91.8
Poverty	75.4
Unemployment	79.7

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	10.5350956
Employed	49.30065443
Median HI	4.273065572
Education	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	100
Healthy Places Index Score for Project Location (b)	14.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes

Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

Paving	0.00	0.00	0.00	0.00	1.84

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	3	74%	74%
Water Demolished Area	2	36%	36%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Apartments Mid Rise	—	0%
Recreational Swimming Pool	0.00	0%
Enclosed Parking with Elevator	1.84	100%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2027	0.00	690	0.05	0.01
2028	0.00	690	0.05	0.01
2026	0.00	690	0.05	0.01

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	9.52	annual days of extreme heat
Extreme Precipitation	6.15	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	50.5
AQ-PM	89.2
AQ-DPM	95.5
Drinking Water	92.5
Lead Risk Housing	71.6
Pesticides	0.00
Toxic Releases	82.2
Traffic	85.9
Effect Indicators	—
CleanUp Sites	97.2
Groundwater	78.1
Haz Waste Facilities/Generators	98.8
Impaired Water Bodies	66.7
Solid Waste	96.0
Sensitive Population	—
Asthma	97.7
Cardio-vascular	65.1
Low Birth Weights	71.6

Socioeconomic Factor Indicators	—
Education	74.4
Housing	68.5
Linguistic	91.8
Poverty	75.4
Unemployment	79.7

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	10.5350956
Employed	49.30065443
Median HI	4.273065572
Education	—
Bachelor's or higher	63.26190171
High school enrollment	100
Preschool enrollment	95.7141024
Transportation	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	100
Healthy Places Index Score for Project Location (b)	14.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Construction: Construction Phases	see construction assumptions
Construction: Off-Road Equipment	see construction assumptions
Construction: Trips and VMT	see construction assumptions
Construction: On-Road Fugitive Dust	see construction assumptions
Construction: Electricity	Carbon intensity for construction years
Land Use	Project Specific

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	9.52	annual days of extreme heat
Extreme Precipitation	6.15	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	50.5
AQ-PM	89.2
AQ-DPM	95.5
Drinking Water	92.5
Lead Risk Housing	71.6
Pesticides	0.00
Toxic Releases	82.2
Traffic	85.9
Effect Indicators	—
CleanUp Sites	97.2
Groundwater	78.1
Haz Waste Facilities/Generators	98.8
Impaired Water Bodies	66.7
Solid Waste	96.0
Sensitive Population	—
Asthma	97.7

Cardio-vascular	65.1
Low Birth Weights	71.6
Socioeconomic Factor Indicators	—
Education	74.4
Housing	68.5
Linguistic	91.8
Poverty	75.4
Unemployment	79.7

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	10.5350956
Employed	49.30065443
Median HI	4.273065572
Education	—
Bachelor's or higher	63.26190171

Hardship	82.8
Other Decision Support	—
2016 Voting	5.0

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	100
Healthy Places Index Score for Project Location (b)	14.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes

Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Construction: Construction Phases	Project Specific - see construction assumptions
Construction: Off-Road Equipment	See construction assumptions
Construction: Trips and VMT	see construction assumptions
Construction: On-Road Fugitive Dust	see construction assumptions
Construction: Electricity	Carbon intensity for construction years
Land Use	Project Specific

Re: Alameda Square, ROW DTLA – Updated Tree Inventory and Tree Disclosure Statement

Dear Ms. Fontaine,

This letter is submitted in response to your request for a tree inventory update at the Alameda Square, ROW DTLA property located at 777 S. Alameda Street in Los Angeles, California. This assignment does not include an impact analysis.

Carlberg Associates (Carlberg) performed an updated project site tree inventory on December 17, 2024. We found and assessed a total of 136 trees: 115 private property trees and 21 street trees. Included are trees in landscape planters, tree cutouts, and several planter 'boxes' that appeared to be connected to the ground. Trees in fully enclosed containers were excluded from the inventory.

Table 1, Summary of Inventoried Project Site and Street Trees, lists the different types and corresponding number of private property trees and street trees. None of the 115 private property trees are protected by the City of Los Angeles' Protected Tree & Shrub Ordinance No.186873.

An aerial exhibit of the project inventory area is enclosed as Exhibit A. Photographs of the inventoried trees, the updated Tree Inventory table (**Table 2**), the updated Tree Location Exhibit and the completed Tree Disclosure Statement are enclosed.

ARBORIST DISCLOSURE STATEMENT

Arborists are tree specialists who use their education, knowledge, training, and experience to examine trees, recommend measures to enhance the beauty and health of trees, and attempt to reduce the risk of living near trees. Clients may choose to accept or disregard the recommendations of the arborist, or to seek additional advice.

Arborists cannot detect every condition that could possibly lead to the structural failure of a tree. Trees are living organisms that fail in ways we do not fully understand. Conditions are often hidden within trees and below ground. Arborists cannot guarantee that a tree will be healthy or safe under all circumstances, or for a specified period of time. Likewise, remedial treatments, like any medicine, cannot be guaranteed.

Treatment, pruning and removal of trees may involve considerations beyond the scope of the arborist's services such as property boundaries, property ownership, site lines, disputes between neighbors, and other issues. Arborists cannot take such considerations into account unless complete and accurate information is disclosed to the arborist. An arborist should then be expected to reasonably rely upon the completeness and accuracy of the information provided.

Trees contribute greatly to our enjoyment and appreciation of life. Nonetheless, they are subject to the laws of gravity and physiological decline. Therefore, neither arborists nor tree owners can be reasonably expected to warrant unfailing predictability or elimination of risk.

Trees can be managed, but they cannot be controlled. To live near trees is to accept some degree of risk. The only way to eliminate all risk associated with trees is to eliminate all trees.

A formal, International Society of Arboriculture Risk Assessment was not requested nor performed for the tree(s) in this letter/report.

The conditions noted in this letter / report are indicative of the conditions present at the time of my site visit.

CHRISTY CUBA
CARLBERG ASSOCIATES
Satellite Office – 80 W. Sierra Madre Blvd., #241 • Sierra Madre • California • 91024
828 Fifth Street, Suite 3 • Santa Monica • California • 90403
christy@cycarlberg.com • m: 626.428.5072

Education
B.A., Environmental Analysis & Design, University of California, Irvine, 1993
Graduate, International Society of Arboriculture Certification Study Program, April 1998
Graduate, Consulting Academy, American Society of Consulting Arborists, February 2006

Experience
Senior Arborist/Associate, Carlberg Associates, 2011 – Present
Director of Environmental Services & Senior Arborist, Land Design Consultants, Inc., Pasadena, 1994 – 2011
Park Specialist/Naturalist, City of Monrovia, 1988-1996

Certificates
Certified Arborist, WE-1982A, International Society of Arboriculture, 1998
Registered Consulting Arborist, #502, American Society of Consulting Arborists, 2011
Qualified Tree Risk Assessor, International Society of Arboriculture

AREAS OF EXPERTISE

Ms. Cuba is experienced in the following areas of tree management and preservation:

- Tree health & risk assessments
- Inventories & reports for native and non-native trees
- Master planning
- Evaluation of trees for preservation, encroachment, relocation, restoration, and hazards
- Value assessments (appraisals) for native and non-native trees
- Post-fire inventories, assessments, and valuations for native and non-native trees
- Guidelines for tree preservation, planting, pruning and maintenance specifications
- Pest and disease identification
- Tree and landscape resource mapping – GPS, GIS, and AutoCAD
- Planning Commission, City Council, and community meetings representation
- Review of landscape plans for mitigation compliance & fire fuel modification planning
- Preparation of native habitat and woodland management plans
- Performance of long-term mitigation compliance monitoring & reporting
- Expert / mediation consultation

PREVIOUS CONSULTING EXPERIENCE

Ms. Cuba has performed hundreds of tree inventories, health evaluations, impact analyses, hazard, and value assessments for counties, cities, sanitation districts, and water districts, as well as private developers, architects, engineers, and homeowners. She has over 30 years of experience in arboriculture and is trained in environmental planning, state and federal regulatory permitting, preparation of CEQA analyses, and habitat mitigation planning and implementation. Representative clients include:

City of Pasadena
City of Monrovia
City of Santa Clarita
City of Glendora
Los Angeles County Fire Department
Los Angeles County Sanitation Districts
The New Home Company
Pulte/Centex Homes
Newhall Land and Farming
Marmol Radziner Architects
Karen Moran, Architect
KIBO Group
California Institute of Technology
San Diego Gas & Electric
Quinn, Emanuel, Urquhart, and Sullivan (attorneys at law)
Figure 8 Group
City of South Gate
City of Sierra Madre
D2 Development
The Claremont Colleges (Pomona, Claremont Graduate University)
Las Encinas Hospital/Aurora-Signature Health
Rose Bowl Stadium
Mia Lehrer + Associates, Landscape Architects
Pamela Burton and Company, Landscape Architects
Chandler School
Occidental College

AFFILIATIONS

Ms. Cuba serves with the following national and regional professional organizations:

- Member, American Society of Consulting Arborists
- Member, International Society of Arboriculture, Western Chapter
- Member, Los Angeles Floss silk Woodland Habitat Conservation Strategic Alliance
- Past President, 2015, Street Tree Seminar, Inc.

ROW DTLA
Tree Photographs

34 Pages

Unless otherwise noted in the caption, trees are non-protected.

Protected Trees and Street Trees (or other public rights-of-way trees) are noted.

Tree OS# = Offsite tree, Tree ST# = street tree or right-of-way tree.

PP/ST – Private property or street tree.
Tree ID – Unique identification number that correlates to the Tree Location Exhibit.
DBH – Diameter at breast height in inches – a forestry term used to define the trunk diameter at 4.5 feet from natural grade.
BT – Brown Trunk – a height measurement from natural grade to the bottom of the palm head or crown - used for palm trees instead of a diameter measurement.
Height – overall tree / palm height – estimated in feet.
Canopy N, E, S, W – tree / palm crown measurements in four compass directions – estimated in feet.
Health Grade – A to F; definitions on next page.
Structure Grade – A to F; definitions on next page.
PM – powdery mildew
MPE – multiple pruning events

HEALTH AND STRUCTURE GRADE DEFINITIONS

The assignment of health and structure grades is limited by what the assessing arborist can see from casual observation only. Health and structure ratings are based on an archetypal tree of the same species, determined by a subjective evaluation of physiological health, aesthetic quality, and structural integrity at the time of the tree's assessment from the ground, without benefit of aerial inspection or detailed root collar exam or excavation.

Overall physiological condition (health) and structural condition are rated A-F:

Health

A) **Outstanding** – Exceptional trees comprising above-average foliage production and vigor for their age class; exhibiting very good to excellent health as evidenced by normal to exceptional shoot growth during the current growing season, good bud development and leaf color, lack of leaf, twig or branch dieback throughout the crown, and the absence of decay, bleeding, or cankers. Common leaf and/or twig pests may be noted at very minor levels.

B) **Above average** – Good to very good trees that exhibit minor necrotic (dead) or physiological symptoms of stress and/or disease; shoot growth is less than reasonably expected, leaf color is less than optimal in some areas, the crown may be thinning, minor levels of leaf, twig, and branch dieback may be present, and minor areas of decay, bleeding, or cankers may be manifesting. Minor amounts of epicormic growth may be present. Minor amounts of fire damage or mechanical damage may be present. Still healthy, but with moderately diminished vigor and vitality. No significant decline noted.

C) **Average** – Average, moderately good trees whose growth habit and physiological or fire-induced symptoms indicate an equal chance to either decline or continue with good health into the near future. Most of these trees exhibit moderate to significant small dead material in outer crown areas, decreased shoot growth, and diminished leaf color and mass. Some stem and branch dieback is usually present and epicormic growth may be moderate to extensive. Cavities, pockets of decay, relatively significant fire damage, bark exfoliation, or cracks may be present. Moderate to significant amounts of insect or disease symptoms may be present; the tree may be shaded or crowded in such a way that it is expected to negatively impact the lifespan of the tree. Tree may be in early decline.

D) **Below Average/Poor** – trees whose growth habit and physiological or fire-induced symptoms indicate significant, irreversible decline. Most of these trees exhibit significant dieback of wood in the crown, possibly accompanied by significant epicormic sprouting. Shoot growth and leaf color and mass is either significantly diminished or nonexistent throughout the crown. Cavities, pockets of decay, significant fire damage, bark exfoliation, and/or cracks may be present. Significant amounts of insect or disease symptoms may be present; the tree may be shaded or crowded in such a way that it has negatively impacted the lifespan of the tree. Tree appears to be in irreversible decline.

F) **Dead or in spiral of decline** – this tree exhibits very little to no signs of life.

Structure

A) **Outstanding** – Trees with outstanding structure for their species exhibit trunk and branch arrangement and orientation that results in a sturdy form or architecture that can resist failure under normal circumstances. The spacing, orientation, and size of the branches relative to the trunk are quintessential for the species and free from defects. No outward signs of decay or pathological disease is present. Some trees exhibit naturally inherent branching defects, like multiple, narrow points of attachment from one point on the trunk, which would preclude them from achieving an "A" grade.

B) **Above average** - Trees with good to very good structure for their species. They exhibit trunk and branch arrangement and orientation that result in a relatively sturdy form or architecture that resists failure under normal circumstances, but may have some mechanical damage, over-pruning, or other minor structural defects. The spacing, orientation, and size of the branches relative to the trunk are still in the normal range for the species, but they exhibit a minor degree of defects. Minor, sub-critical levels of decay or pathological disease may be present, but the degree of damage is not yet structurally significant. Trees that exhibit naturally inherent branching defects, like multiple, narrow points of attachment from one point on the trunk, would generally fall into this category. A small percentage of the canopy may be shaded or crowded, but not in such a way that it is expected to negatively impact the structural integrity or lifespan of the tree.

C) **Average** - Trees with moderately good structure for their species, but with obvious defects. They exhibit trunk and branch arrangement and orientation that result in a less than sturdy form or architecture, which reduces their resistance to failure under normal circumstances. Moderate levels of mechanical damage, over-pruning, or other structural defects may be present. The spacing, orientation, and size of some of the branches relative to the trunk are not in the normal range for the species. Moderate to significant levels of decay or pathological disease may be present that increase the likelihood of structural instability. Influences such as an excessive trunk lean, slope erosion, root pruning, or other growth-inhibiting factors may be present. A moderate to significant percentage of the canopy may be shaded or crowded in such a way that it is expected to negatively impact the structural integrity or lifespan of the tree. Risk of full or partial failure in the near future appears to be moderately elevated.

D) **Well Below Average/Poor** - Trees with poor structure for their species and with obvious defects. They exhibit trunk and branch arrangement and orientation that result in a significantly less than sturdy form or architecture, significantly reducing their resistance to failure under normal circumstances. Significant levels of mechanical damage, over-pruning, or other structural defects may be present. The spacing, orientation, and size of many of the branches relative to the trunk are not in the normal range for the species. Significant levels of decay or pathological disease may be present that increase the likelihood of structural instability. Influences such as an excessive trunk lean, slope erosion, root pruning, or other growth-inhibiting factors may be present. A significant percentage of the canopy may be shaded or crowded in such a way that it is expected to negatively impact the structural integrity or lifespan of the tree. Risk of full or partial failure in the near future appears to be advanced.

F) **Severely Compromised** – trees with very poor structure and numerous or severe defects due to growing conditions, historical or recent pruning, mechanical damage, history of limb or trunk failures, advanced and irreparable decay, disease, or severe fire damage. Trees with this rating are in severe, irreparable decline, or are barely alive. Risk of full or partial failures in the near future may be severe.

APPLICATIONS

TREE DISCLOSURE STATEMENT

Los Angeles Municipal Code (LAMC) Section 46.00 requires disclosure and protection of certain trees located on private and public property, and that they be shown on submitted and approved site plans. Any discretionary application on a property that includes changes to the building footprint or any other change to the areas of the property not currently built upon or paved, including demolition, grading, or fence permit applications, or any discretionary change that could potentially remove or affect trees or shrubs, shall provide a Tree Disclosure Statement completed and signed by the Property Owner.

If the Tree Disclosure Statement indicates that there are any protected trees or protected shrubs on the project site and/or any trees within the adjacent public right-of-way that may be impacted or removed as a result of the project, a Tree Report (CP-4068) will be required, and the field visit must be conducted by a qualified Tree Expert, prepared and conducted within the last 12 months.

Property Address: 777 S. Alameda Street, Los Angeles, CA 90021

Date of Field Visit: December 17, 2024

Does the property contain any of the following protected trees or shrubs?

☐ **Yes** (Mark any that apply below)

- ☐ Oak, including Valley Oak *(Quercus lobota)* and California Live Oak (*Quercus agrifolia*) or any other tree of the oak genus indigenous to California, but excluding the Scrub Oak
- ☐ Southern California Black Walnut (*Juglans californica*)
- ☐ Western Sycamore (*Platanus racemosa*)
- ☐ California Bay (*Umbellularia californica*)
- ☐ Mexican Elderberry (*Sambucus mexicana*)
- ☐ Toyon (*Heteromeles arbutifolia*)

☑ **No**

Does the property contain any street trees in the acjacent public right-of-way?

☑ **Yes** ☐ **No**

Does the prcject occur within the Mt. Washington/Glassell Park Specific Plan Area and contain any trees 12 inches or more diameter at 4.5 feet above average natural grade at base of tree ano/or is more than 35 feet in height?

☐ **Yes** ☑ **No**

Does the prcject occur within the Coastal Zone and contain any of the following trees?

☐ **Yes** (Mark any that apply below)

- ☐ Blue Gum Eucalyptus *(Eucalyptus globulus)*
- ☐ Red River Gum Eucalyptus *(Eucalyptus camaldulensis)*
- ☐ Other Eucalyptus species

☑ **No**

Have any trees or shrubs been removed in the last two years?

☐ **Yes** ☑ **No** None noted

If Yes, were any protected species (as listed in Ordinance No. 186,873)?

☐ **Yes** ☐ **No**

If Yes, provide permit information: _____

Tree Expert Credentials (if applicable)

Name of Tree Expert: Cy Carlberg, Carlberg Associates

Mark which of the following qualifications apply:

- ☐ Certified arborist with the International Society of Arboriculture who holds a license as an agricultural pest control advisor
- ☐ Certified arborist with the International Society of Arboriculture who is a licensed landscape architect
- ☑ Registered consulting arborist with the American Society of Consulting Arborists

Certification/License No.: Registered Consulting Arborist #405

Owner's Declaration

I acknowledge and understand that knowingly or negligently providing false or misleading information in response to this disclosure requirement constitutes a violation of the Los Angeles Municipal Code Section 46.00, which can lead to criminal and/or civil legal action. I certify that the information provided on this form relating to the project site and any of the above trees and/or biological resources is accurate to the best of my knowledge.

Re: ROW DTLA – Mixed-Use Project – City of Los Angeles Tree Report

Dear Ms. Fontaine,

This report addresses our office's site visit on December 9, 2023 to the site of the ROW DTLA mixed-use project (the "Project") located at 757-787 S. Alameda Street, 1318-1396 E. 7th Street, 736-796 S. Central Avenue, 1301-1327 E. 8th Street, 700-760 S. Market Court, 720-746 S. Terminal Street, and 760 S. Warehouse Street (the "Site") located in the Central City Community Plan area of the City of Los Angeles, California (the "City").

EXECUTIVE SUMMARY

The Site consists of three large, irregularly shaped parcels that collectively measure approximately 31 acres in size. It occupies the northern half of the block bounded by E. 7th Street on the north, S. Central Avenue on the west, S. Alameda Street on the east, and E. Olympic Boulevard to the south, with the partially vacated former E. 8th and Bay streets providing internal access within the middle of the block.

The Project proposes the construction of two mixed-use buildings and one multi-family building on the existing paved surface parking lots on a portion of the Site. The Site is located in an expansive industrial district east of Downtown Los Angeles. The area surrounding the Site is primarily developed with warehouses, cold storage facilities, small-scale manufacturing operations, and other industrial uses, though in more recent years newer commercial office, commercial retail, and residential uses have been developed in the vicinity of the Site.

Santa Monica Office
828 Fifth Street, Suite 3
Santa Monica, California 90403
Office: 310.451.4804

Sierra Madre Office
80 West Sierra Madre Boulevard, #241
Sierra Madre, California 91024
Office: 626.428.5072

www.cycarlberg.com

A total of 28 trees were inventoried: 11 are private property trees (none are protected) and 17 are City of Los Angeles street trees. All non-protected private property trees are being proposed for removal; the street trees are unaffected by construction and will be preserved. ***There are no City of Los Angeles Ordinance protected trees associated with the properties.*** Further, there are no trees whose canopies or protected zones overhang the project site boundaries.

ASSIGNMENT AND PURPOSE OF THE TREE REPORT

Carlberg Associates (Carlberg) was retained to conduct a tree inventory and prepare a Tree Report in accordance with guidelines set forth by the City of Los Angeles's Tree Protection Ordinance No. 186,873 and Tree Report Template (CP-4068, July 13, 2023).

City of Los Angeles's Tree Protection Ordinance No. 186,873 (Ordinance)
Protected trees and shrubs as set forth in the Ordinance comprise the following species that measure four inches or greater in "cumulative"[1] trunk diameter (measured at 4.5 feet above natural grade):

- coast live oak (*Quercus agrifolia*)
- valley oak (*Quercus lobata*)
- any other southern California indigenous oak trees but excluding scrub oak (*Quercus berberidifolia*)
- western sycamore (*Platanus racemosa*)
- Southern California black walnut (*Juglans californica)*
- California bay laurel (*Umbellularia californica*)
- Mexican elderberry (*Sambucus mexicana*)
- toyon (*Heteromeles californica*)

Public rights-of-way, parkway, median, and street trees are protected regardless of species or size and must be included in the tree inventory and report.

Los Angeles City Planning CP-4068 [07.07.2022] Tree Report Template (Template)
The Template (dated July 13, 2023) requires the collection and reporting on additional data beyond that required by the Ordinance, both on- and offsite. Some key requirements of the Template include inventory and assessment of all onsite trees regardless of species or size, inventory of offsite trees whose protected zones (12 x the trunk diameter at standard or breast height) may be impacted by the project, inventory of all adjacent street trees, photographs of each tree along with a photograph of a leaf from each tree type, mapping of all trees' locations and their canopies (driplines) plus protected zones, and the tree expert's opinion as to whether the tree occurs naturally or was planted.

This Tree Report will be used during the entitlement and environmental approval process to aid decision-makers and the public in understanding the existing tree resources present on and immediately adjacent to the project site, the potential impacts of the project on the existing tree resources, and the proposed recommendations for tree protection, monitoring, and required mitigation during implementation of the Project.

[1] For purposes of value assessments and other analyses, trunk diameters of multi-stemmed trees will be converted to a single trunk diameter using the methodology set forth in the *Guide for Plant Appraisal*, 10th Edition.

Project Description

The Project proposes the construction of two mixed-use buildings and one multi-family building on the existing paved surface parking lots on a portion of the Site. The Site is located in an expansive industrial district east of Downtown Los Angeles. The area surrounding the Site is primarily developed with warehouses, cold storage facilities, small-scale manufacturing operations, and other industrial uses, though in more recent years newer commercial office, commercial retail, and residential uses have been developed in the vicinity of the Site.

A total of 28 trees were inventoried: 11 are private property trees (none are protected) and 17 are City of Los Angeles street trees. All non-protected private property trees are being proposed for removal; the street trees are unaffected by construction and will be preserved. ***There are no City of Los Angeles Ordinance protected trees associated with the properties.*** Further, there are no trees whose canopies or protected zones overhang the project site boundaries.

TREE ASSESSMENT METHODOLOGY AND DATA PRESENTATION

Project Trees

Carlberg arborists and field technicians conducted the tree inventory on December 9, 2023. Weather conditions were mostly sunny throughout the duration of the inventory.

The tree inventory was conducted on foot. We traversed the entire project site to inventory and assess all onsite trees and all offsite trees whose canopies or protected zones[2] extended into the project site.

The trees were identified, their health and structural condition evaluated[3], trunk diameters measured, heights and canopy spreads approximated, and trunk locations plotted on the topographic survey map provided to us by the project team. More specifically, the inventory included the following assessment factors for protected and non-protected, onsite, immediately offsite, and street trees:

- **Tree Number** (unique tree number engraved on an aluminum tag affixed to each tree, as access allowed)
- **Botanical and Common Name**
- **Trunk Diameter** (diameter at standard height (DSH) / diameter at breast height (DBH) is measured at 4.5 feet above natural grade, or as indicted in the spreadsheet if deviated)
- **Indication** if the tree is a sapling or has a diameter of less than 4 inches
- **Height and Canopy Spread** (approximated)
- **Physiological Condition (health)**
- **Structural Condition**
- **Presence of infectious tree diseases and / or pests**
- **Treatments** (if pests or diseases are outwardly apparent, treatment is generally recommended, but no specific treatment will be called out since only a licensed pest control advisor may opine on specific treatments)
- **Expert opinion** if the tree appears to be naturally occurring or intentionally planted
- **Photographs of All Trees** (or groups of trees where applicable)

Field data was collected on tablets, tree trunk locations were generally mapped on a 50-scale, 36" x 48" topographic sheet map, and photographs were taken with digital cameras. Tree identification numbers, trunk

[2] 'Protected zone' equals 15 feet from the dripline of a tree or 15 feet from the trunk of an unbalanced or young tree, whichever is greater.
[3] Each tree is assigned two letter grades, one for overall health and one for structure. Definitions for the letter grades are included in the appendices of this report.

locations, and tree canopies with protection zones are graphically represented on the Tree Location Exhibit prepared by Carlberg in AutoCAD.
A Tree Photograph Exhibit provides captioned photographs of the trees, and provides an idea of site context, tree densities, conformation, and vigor.

OBSERVATIONS

PROJECT SITE TREES

We inventoried and assessed 28 trees of three species on and immediately adjacent to the property: there were no off-site trees whose canopies overhang the subject property.

Of the 28 trees, 17 are street trees and 11 are non-protected private property trees. **Table 2** summarizes the three types of trees found, their onsite or street tree status, and how many of each type are included in the inventory.

TABLE 2 – SUMMARY OF INVENTORIED PROJECT SITE AND IMMEDIATELY ADJACENT STREET TREES

COMMON NAME	BOTANICAL NAME	TOTAL NO. ONSITE	TOTAL NO. OFFSITE	TOTAL NO. STREET TREES	TOTAL NO. TREE SPECIES
African fern pine	*Afrocarpus falcatus*			17	17
London plane	*Platanus x hispanica*	8			
Mexican fan palm	*Washingtonia robusta*	3			
		11		**17**	**28**

Exhibit C – Reduced Copy of the Tree Location Exhibit on page 11 provides an illustrative presentation of the existing trees.

Exhibits on the following pages include the **Tree Inventory Field Data and Tree Photograph Exhibit**. The following **Tables 3-4** are summaries of the private property, non-protected and street trees.

TABLE 3 – SUMMARY OF NON-PROTECTED TREES

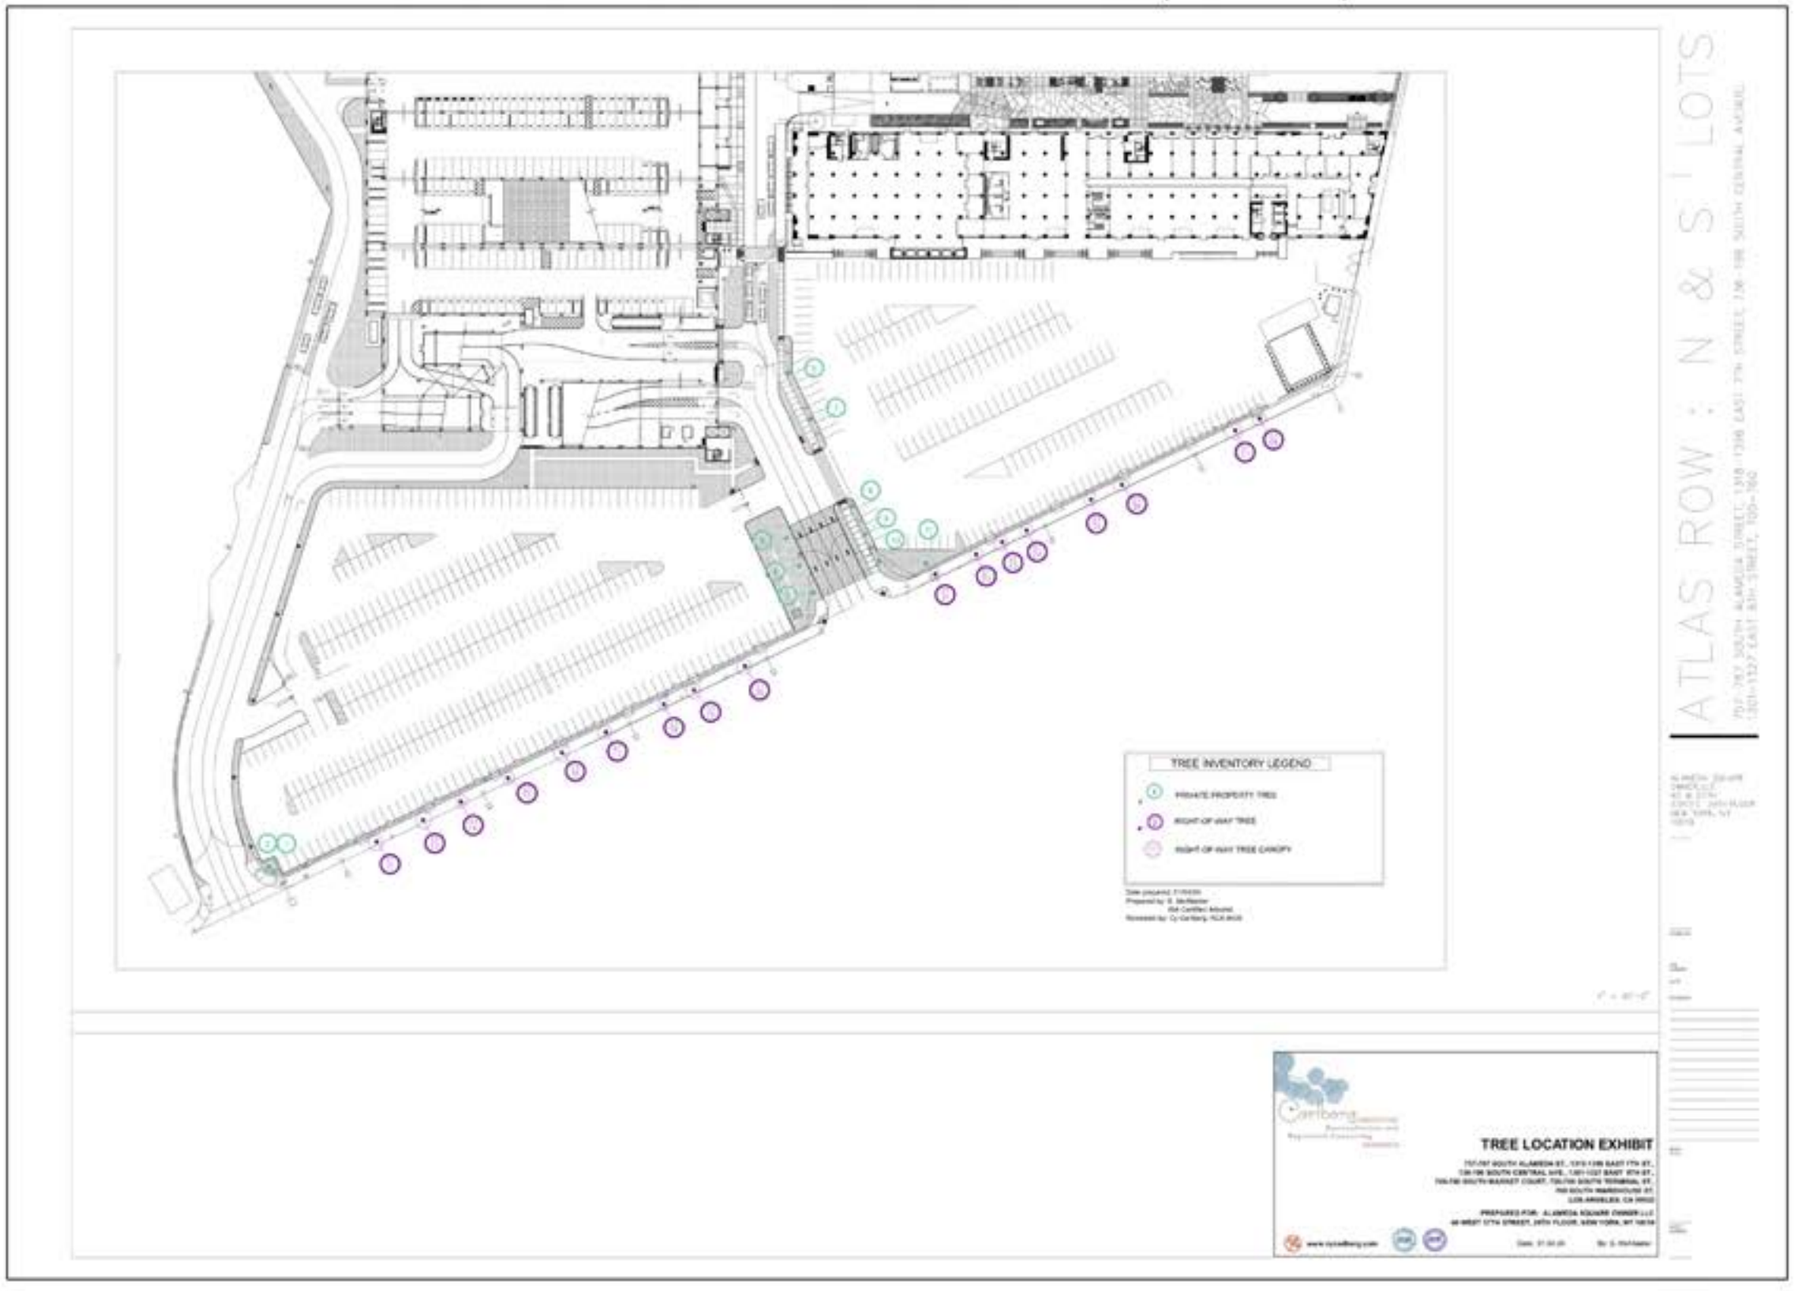
In our opinion, the private property trees have been planted into the landscape or have grown as volunteers (a plant that grows on its own rather than being deliberately planted)

Dbh: diameter at breast height – a forestry term used to describe a tree trunk's diameter measured at 4.5 feet above grade; typically used as a representation of tree size. Also known as Diameter at Standard Height.

BT – Brown Trunk. Because palms do not generally increase in trunk diameter as they mature, they are measured in their brown trunk height, the distance between natural grade and the newest emerging spear.

EXHIBIT C – REDUCED COPY OF THE TREE LOCATION EXHIBIT (NOT TO SCALE)



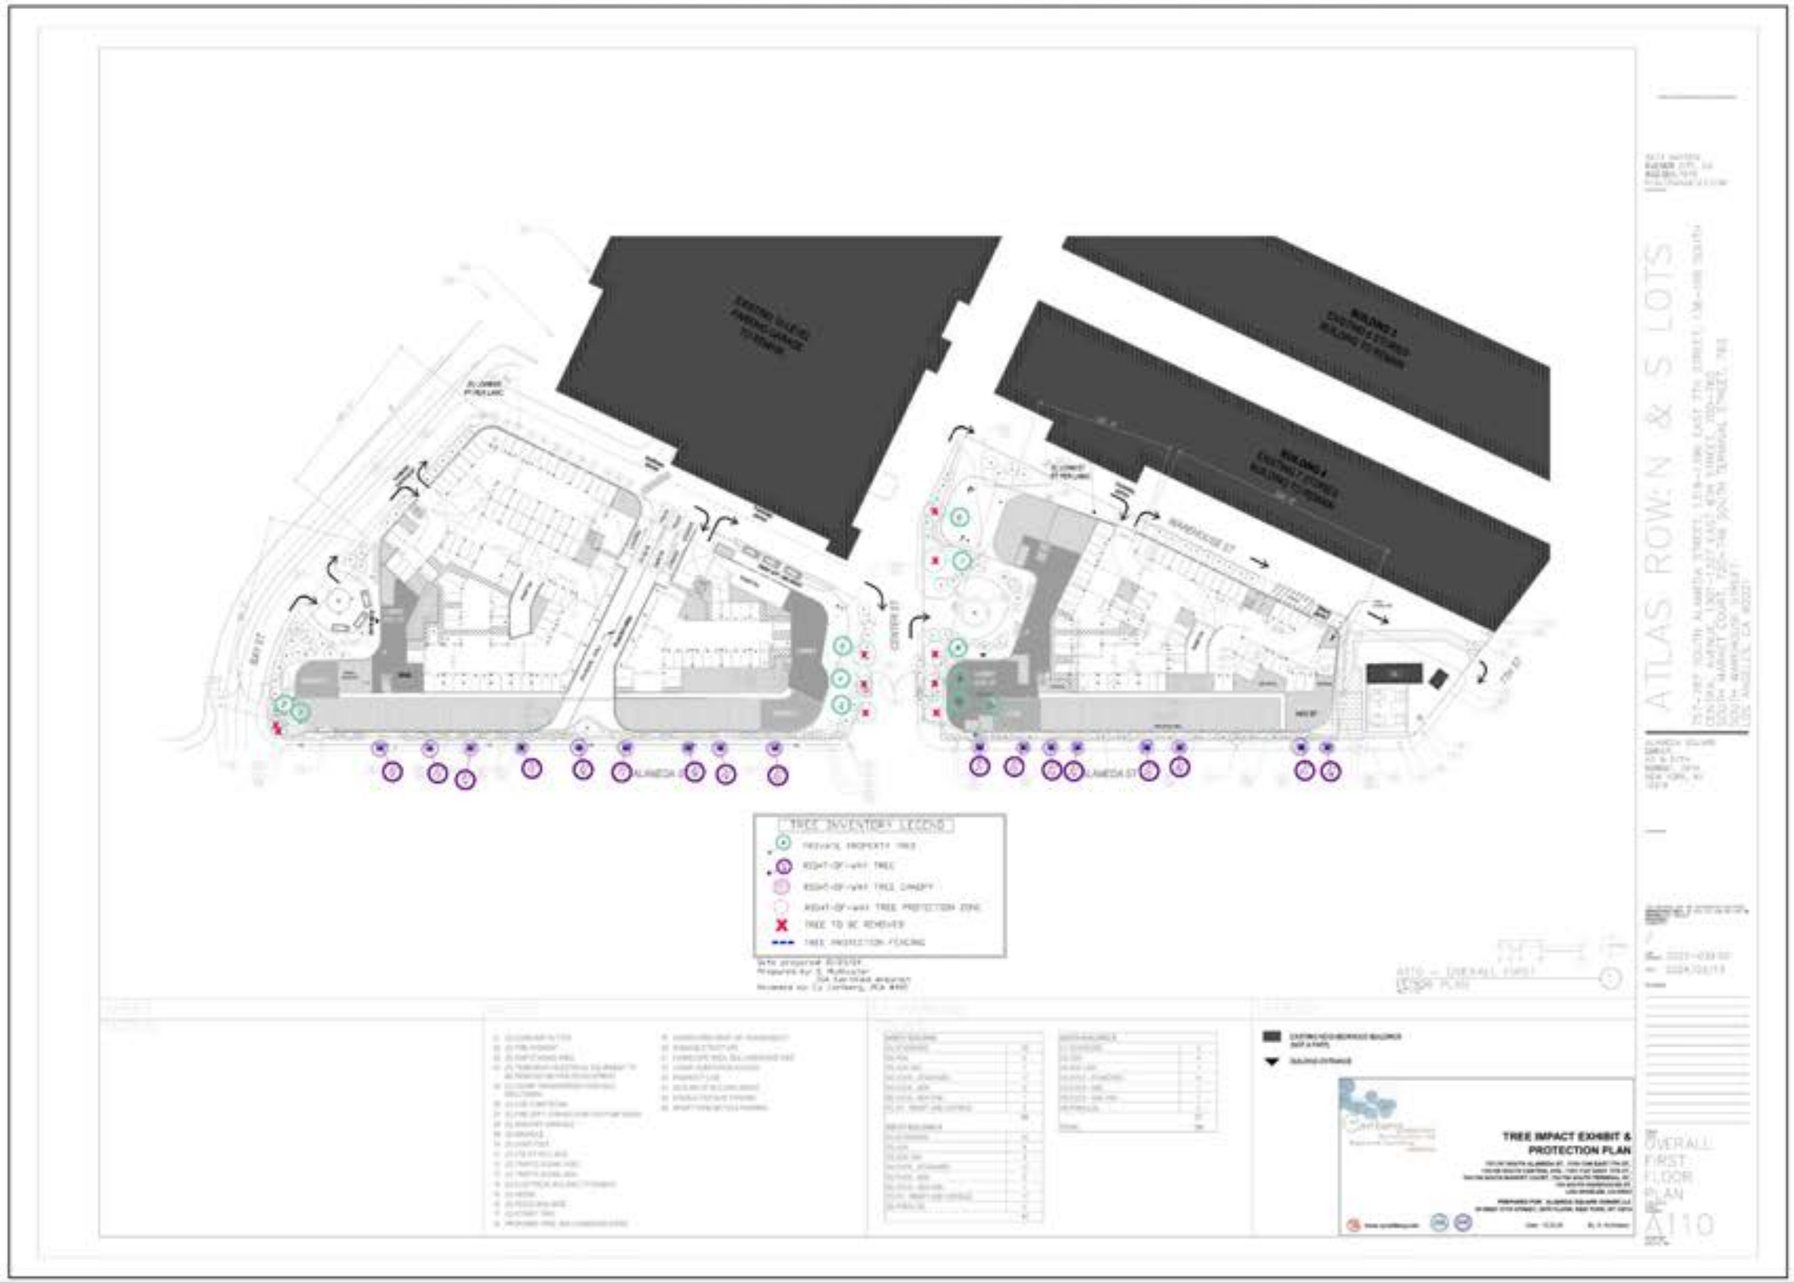


EXHIBIT D – REDUCED COPY OF THE TREE IMPACT EXHIBIT (NOT TO SCALE) – 2 PAGES

Tree Protection Notes

Tree Protection Zone Definition and Notes

1. Unless otherwise defined by the project's jurisdictional entity (City Of Los Angeles), the Tree Protection Zone (TPZ) is defined here as the outer edge of the tree canopy (or dripline) plus five feet, or 15 feet from the trunk, whichever is greater. This is intended to provide both canopy and root protection.

2. Tree roots are generally located in the top 12 - 36 inches of the soil surface and can extend to a distance exceeding the tree's height and/or width.

3. In general, and depending on the type of tree, large structural roots (defined here as those greater than 2 inches in diameter) usually extend about three to five feet from the trunk before they turn downward or branch off into smaller roots.

4. If damaged, cut, scuffed, or torn, structural roots can become infected with root disease that may result in wood decay or death of tissue in the trunk, roots, or root collar. With time, dieback related to cambium death may reach the lateral and upper branches of the tree.

5. In addition to structural roots, trees typically have thousands of smaller feeder/absorptive roots in the upper layers of soil that absorb water and nutrients and provide for gas exchange. Absorbing roots of the tree can sustain damage during construction from lack of water, soil compaction, cutting, tearing, or scraping.

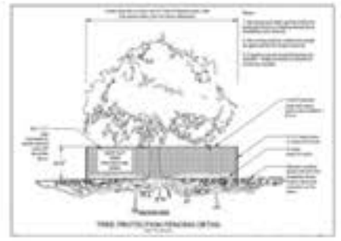
Pruning

1. Pruning may require a permit. It is incumbent on the Applicant or Developer to contact the appropriate agencies for pruning permits, pay necessary application & permit fees, etc.
2. To maintain tree integrity, pruning shall be monitored by the Project Arborist.
3. Pruning should be in accordance with the most recent editions of the International Society of Arboriculture Best Management Practices and ANSI A300 Pruning Standard.
4. Pruning of oaks should be limited to the removal of dead wood and the correction of potentially hazardous conditions, as evaluated by the Project Arborist. Excessive pruning is harmful to oaks and many other trees. Removal or reduction of major structural limbs should be done only as required for actual building clearance or safety, and only at the recommendation of the Project Arborist. If limbs must be removed, cuts should be made perpendicular to the branch, to limit the size of the cut face. The branch bark collar should be preserved (i.e. no "flush cuts"), and cuts should be made in such a way as to prevent the tearing of bark from the tree.
5. Pruning of trees other than oaks should be limited to the removal or reduction of major structural limbs and should be done only as required for actual building clearance or safety, and only at the recommendation of the Project Arborist. If limbs must be removed, cuts should be made perpendicular to the branch, to limit the size of the cut face. The branch bark collar should be preserved (i.e. no "flush cuts"), and cuts should be made in such a way as to prevent the tearing of bark from the tree.

Inspections

1. Inspection of Protective Fencing - The Project Arborist shall inspect the tree protection fencing prior to demolition, grubbing, grading, or construction. City staff may also inspect fencing to verify placement and approval of materials prior to the commencement of demolition, grading, or construction.
2. Pre-construction meeting - City staff may require an on-site pre-construction meeting with the contractor and or applicant to discuss tree protection with the site supervisor, grading equipment contractors, and demolition crew. The Project Arborist shall be present at that meeting.
3. Inspection during rough grading - City staff my require inspection to ensure protected trees will not be injured by compaction, cut or fill, drainage and trenching activities.
4. Special Activity in the Tree Protection Zone - The Project Arborist shall provide direct on-site supervision of work in the tree protection zone, as they deem appropriate, or as directed in the project's tree permit and conditions of approval.
5. Periodic Inspections - City staff may require inspections verifying adherence to tree protection measures during the on-going construction process. Allow a minimum of 48-72 hours for scheduling inspections.
6. The Project Arborist shall report discrepancies or deficiencies in Tree Protection to the site superintendent / Applicant for corrective action. If corrective actions are not taken in a reasonable time frame, the Project Arborist may notify City staff for enforcement action.
7. Final inspection shall occur after all work is completed for the project, including landscape installments.

Tree Protection Guidelines



The following guidelines are intended to minimize damage to the canopies and root systems of trees to remain in the project area (regardless of protected or non-protected status from ordinance or code restrictions).

1. Construction activity shall be diverted from the Tree Protection Zone, as practical to the space and as permitted for encroachments.
2. A Project Arborist shall be retained by the Applicant / Developer to monitor the trees and inspect the tree protection measures during development activities. The Project Arborist shall monitor all work that must be performed in the Tree Protection Zone. The Project Arborist should be experienced in construction monitoring and shall be an ISA Certified Arborist and/or an ASCA Registered Consulting Arborist®.
3. Some encroachments into the Tree Protection Zone may be unavoidable. Encroachments may only be allowed by permit. It is incumbent on the Applicant to apply for and obtain the necessary tree removal and/or encroachment permits from the appropriate jurisdiction. Copies of the removal/encroachment permit (where necessary) shall be maintained onsite with a copy of this plan.
4. Protective chain-link fencing, at least five feet in height, with an access gate of minimal width, shall be installed at the limits of the Tree Protection Zone (or as drawn on the Tree Protection Plan) and approved in place by the Project Arborist prior to commencement of any demolition, grubbing, grading or construction. This pertains to both public trees (parkway trees, etc.), where applicable, and private trees.
5. When chain link fencing cannot be placed to the limits of the Tree Protection Zone due to approved encroachments, the Project Arborist may require that orange snow fencing be placed at the limits of the Tree Protection Zone as a temporary protection measure until the encroachment work is performed. This will be determined at a pre-demolition-construction job site meeting with the contractor and/or applicant.
6. Non-protected trees should be protected with a minimum of orange snow fencing at the limits of work.
7. The Tree Protection Zone should be sufficiently irrigated with clean potable water to keep the tree in good health and vigor before, during, and after construction. This may include occasional deep-watering treatments. Installation of layers of sandbags or other material to create a watering well, or berm, may be necessary. The Project Arborist will recommend this activity, if necessary.
8. No construction staging or disposal of construction materials or byproducts, including but not limited to, paint, plaster, or chemical solutions is allowed in the Tree Protection Zone.
9. The Tree Protection Zone shall not be subjected to flooding or runoff incidental to the construction work.
10. Unless otherwise stated in the project's conditions of approval and/or the tree encroachment permit, all work conducted in the ground within the Tree Protection Zone should be accomplished with hand tools or other small equipment that is approved by the Project Arborist.
11. Permitted / approved trenches in the Tree Protection Zone should be tunneled, dug by hand, or completed with an air-spade to minimize damage to roots. Information regarding air-spades is available from the Project Arborist.
12. Permitted / approved trenches should be routed in such a manner as to minimize root damage. Radial trenching (radial to the tree trunk) is preferred since it is less harmful than tangential trenching. Cutting of roots should be avoided by, for example, placing pipes and cables below uncut roots. Wherever possible and in accordance with applicable code requirements, the same trench should be used for multiple utilities.
13. Except as permitted by the limits of an encroachment, "natural" or pre-construction grade shall be maintained in the Tree Protection Zone. At no time during or after construction should excess soil be in contact with the base of the trunk.
14. In areas where the grade around the protected tree is permitted for excavation and reduction, some root cutting may be unavoidable. Encroachment permits may be required for this work. Cuts should be clean and made at right angles to the roots. When practical, cut roots back to a branching lateral root. The Project Arborist shall monitor all root excavation and pruning.
15. When removing existing pavement, foundations, utilities, etc. in the Tree Protection Zone, avoid the use of heavy equipment, which may compact and damage the host system. The Project Arborist shall monitor all demolition activities in the Tree Protection Zones.
16. If the Project Arborist requires mulch in the Tree Protection Zone, the mulch materials and location will be shown on the plan or discussed during inspections.
17. Root damage and soil compaction may be mitigated in some cases by using plywood, mulch, or mulch overlain with plywood in the Tree Protection Zone. The Project Arborist may require this action at any point during demolition and construction as the project progresses.
18. Canopy tie-backs - canopy ties may be recommended instead of pruning. The Project Arborist may require this action at any point during demolition and construction as the project progresses.
19. Weather-proof, minimum 8.5 x 10 inches, signage shall be applied to the fencing (with zip-ties or other fasteners) on all sides. It will state:

Tree Protection Fencing
Do Not Remove Without Authorization From
CITY OF LOS ANGELES
Questions - call Project Arborist: Carlberg Associates
Christy Cuba (626) 426-9072 or Cy Carlberg (310) 451-4604

Definitions

1. Basal flare or root crown means the tree trunk where it emerges from the root system and flares out to create the base of the tree.
2. Canopy means the area of a tree that consists primarily of branches and leaves.
3. Dripline means the outermost area of the tree canopy (leafy area of tree).
4. The cambium layer is located immediately beneath the bark and is responsible for the increase of stem and root diameter.
5. Certified Arborist means an individual who has demonstrated knowledge and competency through obtainment of the current International Society of Arboriculture Arborist Certification (Certified Arborist).
6. Registered Consulting Arborist® means an individual who has demonstrated knowledge and competency through the American Society of Consulting Arborists' registration process and maintains membership and registration as required by the organization.
7. Public Trees are defined as trees that are located in a center median, in the parkway between the curb face and the property line or are in an easement. For work on these trees, including installation of Tree Protection Fencing, contact the City of Los Angeles (City Urban Forestry Division). A permit is generally required for fencing, pruning, or otherwise impacting parkway trees. Some Public Works Departments have their own Tree Protection Specifications.

DISCUSSION OF PROJECT IMPACTS

There are numerous potential consequences related to residential construction that may affect trees during and after a typical construction process. They are as follows:

- EXCAVATION - ROOT SEVERANCE
- SOIL COMPACTION (DURING AND POST-CONSTRUCTION)
- ALTERATION OF THE WATER TABLE/SITE DRAINAGE
- CHANGES IN GRADE – CUT OR FILL
- SUBSTANTIAL TRIMMING OF CANOPY OR ROOTS

A. *Excavation/Trenching—Root Severance*

Trenching can include excavation for irrigation, utility, or drainage lines. Trenching and excavation can also be required for foundations of structures and free-standing walls. Trenching and excavation removes soil and tree roots. When performed in the critical root zone (approximately 5x the trunk diameter of any tree) or within the dripline (outer edge of the natural canopy), there is the potential to remove large areas of root mass, and to shatter and tear roots that will remain connected to the tree(s). Torn and shattered roots cannot callous over or generate new roots in the manner of cleanly-cut roots. Torn and shattered roots are potentially unstable, are entry points for disease and decay organisms, and eventually die. Significant root loss and/or severance can be critical to the health and structure of trees to remain in a landscape.

B. *Soil Compaction*

Soil compaction is a complex set of physical, chemical, and biological constraints on tree growth. Principal components leading to limited growth are the loss of aeration and pore space, poor gas exchange with the atmosphere, lack of available water, and mechanical hindrance of root growth. Soil compaction is considered the largest single factor responsible for the decline of trees on construction sites.

C. *Changes in Grade*

Changes in grade, by the addition or removal of soil (filling or cutting), can be injurious. Lowering the grade around trees can have immediate and long-term effects on trees. The addition of soil and compaction for common engineering practices also results in long-term effects on trees. Typically, the vast majority of the root mass exists within the top three feet of soil, and most of the fine roots active in water and nutrient absorption are in the top 12 inches.

D. *Alteration of the Water Table/Site Drainage*

The water table is the upper surface of the zone in which soil macropores are saturated with water; water tables may vary seasonally. Rather than a flat, static surface, the water moves down a gradient. Its depth varies, depending on the structure of the soil and rocks through which it flows. A perched water table may form in soils that have impermeable strata. Swamps are created where the water table intersects level ground.

Structures such as footings, basements, subterranean buildings, and retaining walls may intercept impermeable layers in the soil on which water perches. If adequate drainage is not provided, the water table uphill may gradually rise and interfere with tree roots. This type of damage usually takes a period of time to be recognized and diagnosed.[4]

Numerous trees are particularly susceptible to root infections, such as Armillaria and Phytophthora. Both of these fungal diseases can progressively weaken a root system, resulting in dead branches in the canopy of the tree, loss

[4] Nelda Matheny and James R. Clark, Trees and Development: A Technical Guide to Preservation of Trees During Land Development, (Champaign, Illinois: International Society of Arboriculture, 1998), pp. 88-89.

of stability of the entire tree because of decaying roots, and premature death of the tree. Trees form roots in accordance with existing soil composition and water availability. Minor drainage changes in the winter and spring months are significant to the health of the trees.

E. Canopy and Root Pruning

Leaves perform vital functions for trees. Through photosynthesis, they manufacture sugars that feed the tree and are used to create the building blocks of wood. Leaves help to move water and nutrients up from the roots and around the tree through their vascular system and cool the tree down through transpiration.
Leaves moderate temperatures beneath the tree, lessen the drying action of winds, and intercept rainfall, which reduces erosion. On the ground, they moderate soil temperatures, retain moisture, and as they decompose, return their nutrients back to the soil to be recycled and reused by the tree. A healthy canopy of leaves is essential to ensure an adequate food supply for the roots to perform their important functions.

Typically, root systems extend outward past the dripline, two to four times the diameter of the average tree's crown. Main root functions include water and mineral conduction, food and water storage, and anchorage of the tree to the soil. Root systems consist of short-lived, fine-textured, feeder roots and larger, woody, perennial roots. Feeder roots, while averaging only 1/16 inch in diameter, constitute the major portion of the root system's surface area. Feeder roots act like sponges, growing predominantly outward and upward from the large roots near the soil surface where minerals, water, and oxygen are usually abundant. Larger, woody roots and their subordinates tend to annually increase in diameter and grow horizontally. Predominantly located in the top 6 to 24 inches of the soil, these structural and storage roots usually do not grow deeper than three to seven feet. Root growth is generally inhibited by soil compaction and temperature. As the depth increases, soil compaction increases, and the availability of water, minerals, oxygen, and soil temperature all decrease.

Removal of significant amounts of the canopy and/or root system can lead to both immediate and long-term detrimental effects on trees. Effects can be physiological, structural, or both.

Trees to be preserved or removed, along with the proposed location of recommended protective fencing, are illustrated on the reduced and full-sized copies of the Tree Impact Exhibit and Protection Plan.

Tables 5-6 on the following pages provide details of the trees proposed for preservation and removal. As summarized in the tables:

- **11 non-protected trees will be removed**
- **0 non-protected trees will be preserved**
- **0 street trees will be removed**
- **17 street trees will be preserved**

CONCLUSION AND RECOMMENDATIONS

Implementation of the ROW DTLA – Mixed-Use Project, including demolition, grading, construction of improvements, and installation of streets and utilities for the proposed new parking, roads (driveways), new entry, buildings and utility changes will likely result in the following:

Total Street trees = 17
Removals = 0
Preserve = 17

Total Onsite Non-Protected trees = 11
Removals = 11
Preserve = 0

Total Onsite Protected trees = 0

Total Offsite Non-Protected trees = 0

Total Offsite Protected trees = 0

In my professional opinion, the following Best Management Practices (BMPs), recommendations, and conditions should be implementation:

Street Tree Removals (if applicable):

1. Street trees proposed for removal are generally mitigated with 24-inch box specimens using a 2:1 ratio. (Bureau of Street Services, Urban Forestry Division).
2. Mitigation trees shall be guaranteed under a bond for a period of three years. The bond amount will be determined through negotiations between the applicant team and the Urban Forestry Division prior to issuance of a grading permit. The bond will be posted prior to issuance of a grading permit.
3. The Urban Forestry Division shall be notified at least ten (10) days prior to the date of the approved Protected Tree removals. The applicant's Tree Expert (project arborist) shall be on-site for the duration of the tree removals to ensure that the proper trees are removed. A post-tree removal site meeting with an Urban Forestry Division arborist will be required one day after the removals are complete.
4. The Urban Forestry Division shall be notified no later than five days after completion of the tree replacement plantings.
5. The applicant, along with the project arborist and landscape architect, shall be responsible to ensure that the tree removal permit tree replacement conditions are met. Monitoring and compliance documentation will be required as outlined in the General Recommendations below.
6. The mitigation tree bond will be released upon satisfactory compliance with the Protected Tree Removal Permit and all associated conditions.
7. An automatic irrigation should be provided for all mitigation trees.
8. The City Planning Department will make the final determination in the CEQA document and /or other conditions of approval as to the final number of mitigation trees required, the container sizes, and the species to be planted on-site.

General Recommendations and Best Management Practices:

9. Any demolition, digging, excavating, or trenching within the protected zone of any protected tree to remain shall be monitored by the project arborist.
10. Exposed roots to remain should be covered with burlap, carpet remnants or other material that may be kept moist until soil can be replaced.
11. This report shall be part of the set of plans given to the contractors. Contractors should be familiar with the specific instructions and responsibilities pertaining to protected trees. It is recommended that a professional arborist be retained and meet with the contractor and his personnel prior to commencement of the project.
12. If canopy pruning is found to be necessary for trees to remain, it should only be performed by a qualified ISA Certified Arborist or ISA Certified Tree Worker. Climbing "gaffs" shall not be used by any tree climber except in an emergency to reach an injured climber or when removing a tree.
13. Protected trees shall not be removed until/unless approval is granted by the City of Los Angeles' Urban Forestry Division.
14. Pruning or Removals shall occur outside of the nesting bird season as defined by the California Department of Fish and Wildlife and other jurisdictional agencies. If removals must occur in nesting bird season, biological monitoring should be required.

15. Construction monitoring reports will be submitted to the Urban Forestry Division at appropriate intervals. Intervals may vary depending on the level of activity on-site. A monitoring and reporting program will be developed by the project arborist for various phases of the development process. This program will be submitted to the Urban Forestry Division prior to issuance of grubbing, grading, or demolition permits. A final compliance report will be prepared for submission to Urban Forestry upon completion of the project.
16. A maintenance and monitoring program for mitigation trees will be included in the monitoring and reporting program that will be developed by the project arborist. This program will be developed in coordination with the project landscape architect. At least three (3) years of monitoring for mitigation trees is recommended. The Urban Forestry Division will dictate the actual monitoring period for mitigation trees.
17. Equipment, materials, and vehicles shall not be stored, parked, or operated within the protected zone of trees to remain.
18. Equipment with overhead exhaust shall not be placed in such a manner as to scorch overhanging branches or foliage. Smaller equipment shall be used in such areas as deemed necessary by the monitoring arborist.
19. Five (5) foot high chain link fencing shall be installed as illustrated on the Tree Protection Plan prior to submission of this report to the Urban Forestry Division of the City of Los Angeles (reports may not be deemed complete by the Division if fencing is not in place). Photographs of the fencing should be submitted with the report. When performing their inspection, Urban Forestry requires that the protective fencing be in place.

Please feel welcome to contact me at our Santa Monica office if you have any immediate questions or concerns.

Respectfully submitted,

Cy Carlberg, Registered Consulting Arborist
Principal, Carlberg Associates

This report comprises a total of 46 pages. Reduced copies of the full-sized, color copies of the 'Tree Location Exhibit' are included in this report; full-sized copies were submitted electronically. Unauthorized separation or removal of any portion of this report deems it invalid as a whole.

Conditions represented in this report are limited to the inventory dates and times. Formal risk assessments were not performed for the purposes of this report. Ratings for health, aesthetics, and structure do not constitute a health or structural guarantee beyond that date and time.

CERTIFICATION OF PERFORMANCE

I, Cy Carlberg, certify:

- That I have personally inspected the tree(s) and/or the property referred to in this report and have stated my findings accurately. The extent of the evaluation and appraisal is stated in the attached report and the Terms of Assignment.
- That I have no current or prospective interest in the vegetation or the property that is the subject of this report and have no personal interest or bias with respect to the parties involved.
- That the analysis, opinions, and conclusions stated herein are my own.
- That my analysis, opinions, and conclusions were developed, and this report has been prepared according to commonly accepted arboricultural practices.
- That no one provided significant professional assistance to the consultant, except as indicated within the report.
- That my compensation is not contingent upon the reporting of a predetermined conclusion that favors the cause of the client or any other party.

I further certify that I am a Registered Consulting Arborist and member of the American Society of Consulting Arborists, and that I acknowledge, accept, and adhere to the ASCA Standards of Professional Practice. I am an International Society of Arboriculture Certified Arborist and Qualified Tree Risk Assessor and have been involved in the practice of arboriculture and the study of trees for over twenty-five years.

Signed:

Date: January 4, 2024, November 4, 2024

Cy Carlberg
ASCA Registered Consulting Arborist #405
ISA Certified Arborist, WE-0575A
Qualified Tree Risk Assessor
CAUFC Certified Urban Forester #013

ARBORIST DISCLOSURE STATEMENT

Arborists are tree specialists who use their education, knowledge, training and experience to examine trees, recommend measures to enhance the beauty and health of trees, and attempt to reduce the risk of living near trees. Clients may choose to accept or disregard the recommendations of the arborist, or to seek additional advice.

Arborists cannot detect every condition that could possibly lead to the structural failure of a tree. Trees are living organisms that fail in ways we do not fully understand. Conditions are often hidden within trees and below ground. Arborists cannot guarantee that a tree will be healthy or safe under all circumstances, or for a specified period of time. Likewise, remedial treatments, like any medicine, cannot be guaranteed.

Treatment, pruning and removal of trees may involve considerations beyond the scope of the arborist's services such as property boundaries, property ownership, site lines, disputes between neighbors, and other issues. Arborists cannot take such considerations into account unless complete and accurate information is disclosed to the arborist. An arborist should then be expected to reasonably rely upon the completeness and accuracy of the information provided.

Trees contribute greatly to our enjoyment and appreciation of life. Nonetheless, they are subject to the laws of gravity and physiological decline. Therefore, neither arborists nor tree owners can be reasonably expected to warrant unfailing predictability or elimination of risk.

Trees can be managed, but they cannot be controlled. To live near trees is to accept some degree of risk. The only way to eliminate all risk associated with trees is to eliminate all trees.

LIST OF CONTIBUTORS AND RESUMES OF KEY STAFF

Ms. Cy Carlberg, Principal
Mr. Scott McAllaster, Staff Arborist and AutoCAD Draftsperson
Mr. Daniel Cowell, Staff Arborist, Biologist

Education
B.S., Landscape Architecture, California State Polytechnic University, Pomona, 1985
Graduate, Arboricultural Consulting Academy, American Society of Consulting Arborists, Chicago, Illinois, February 2002
Graduate, Municipal Forestry Institute, Lied, Nebraska, 2012

Experience
Consulting Arborist, Carlberg Associates, 1998-present
Manager of Grounds Services, California Institute of Technology, Pasadena, 1992-1998
Director of Grounds, Scripps College, Claremont, 1988-1992

Certificates
Certified Arborist (#WE-0575A), International Society of Arboriculture, 1990
Registered Consulting Arborist (#405), American Society of Consulting Arborists, 2002
Certified Urban Forester (#013), California Urban Forests Council, 2004
Qualified Tree Risk Assessor, International Society of Arboriculture, 2011

AREAS OF EXPERTISE

Ms. Carlberg is experienced in the following areas of tree management and preservation:

- Tree health and risk assessment
- Master Planning
- Historic landscape assessments, preservation plans, reports
- Tree inventories and reports to satisfy jurisdictional requirements
- Expert Testimony
- Post-fire assessment, valuation, and mitigation for trees and native plant communities
- Value assessments for native and non-native trees
- Pest and disease identification
- Guidelines for oak preservation
- Selection of appropriate tree species
- Planting, pruning, and maintenance specifications
- Tree and landscape resource mapping – GPS, GIS, and AutoCAD
- Planning Commission, City Council, and community meetings representation

PREVIOUS CONSULTING EXPERIENCE

Ms. Carlberg has overseen residential and commercial construction projects to prevent damage to protected and specimen trees. She has thirty-five years of experience in arboriculture and horticulture and has performed tree health evaluation, value and risk assessment, and expert testimony for private clients, government agencies, cities, school districts, and colleges. Representative clients include:

The Huntington Library and Botanical Gardens
The Los Angeles Zoo and Botanical Gardens
The Rose Bowl and Brookside Golf Course, Pasadena
Walt Disney Concert Hall and Gardens
The Art Center College of Design, Pasadena
Pepperdine University
Loyola Marymount University
The Claremont Colleges (Pomona, Scripps, CMC, Harvey Mudd, Claremont Graduate University, Pitzer, Claremont University Center)
Quinn, Emanuel, Urquhart and Sullivan (attorneys at law)
Getty Trust – Eames House
Historic Resources Group
Mia Lehrer + Associates
The City of Claremont
The City of Beverly Hills
The City of Pasadena
The City of Los Angeles
The City of Santa Monica
Santa Monica/Malibu Unified School District
San Diego Gas & Electric
Los Angeles Department of Water and Power
Rancho Santa Ana Botanic Garden, Claremont
Latham & Watkins, LLP (attorneys at law)
Architectural Resources Group
AHBE Landscape Architects
Moule and Polyzoides, Architects and Urbanists

AFFILIATIONS

Ms. Carlberg serves with the following national, state, and community professional organizations:

- California Urban Forests Council, Board Member, 1995-2006
- Street Tree Seminar, Past President, 2000-present
- American Society of Consulting Arborists Academy, Faculty Member, 2003-2005; 2014
- American Society of Consulting Arborists, Board of Directors, 2013-2015
- Member, Los Angeles Oak Woodland Habitat Conservation Strategic Alliance, 2010-present

Education	B.A., Environmental Studies, University of California, Santa Barbara, 2000
Experience	Project Planner & Senior Arborist, Land Design Consultants, Inc. Pasadena, 1999 – 2014
Certificates	Certified Arborist, WE-7011A, International Society of Arboriculture, 2004 Qualified Tree Risk Assessor, International Society of Arboriculture, 2015

AREAS OF EXPERTISE

Mr. McAllaster is experienced in the following areas of tree management and preservation:

- Tree health & risk assessments
- Inventories & reports for native and non-native trees
- Master planning
- Evaluation of trees for preservation, encroachment, relocation, restoration, and hazards
- Construction monitoring and reporting
- Value assessments (appraisals) for native and non-native trees
- Post-fire inventories, assessments, and valuations for native and non-native trees
- Guidelines for tree preservation, planting, pruning and maintenance specifications
- Tree and landscape resource mapping – GPS, GIS, and AutoCAD
- Planning Commission, City Council, and community meetings representation
- Review of landscape plans for mitigation compliance & fire fuel modification planning
- Performance of long-term mitigation compliance monitoring & reporting

PREVIOUS CONSULTING EXPERIENCE

Mr. McAllaster has performed hundreds of tree inventories, health evaluations, impact analyses, hazard, and value assessments for counties, cities, sanitation districts, and water districts, as well as private developers, architects, engineers, and homeowners. He has over 17 years of experience in arboriculture and is trained in environmental planning, state and federal regulatory permitting, preparation of CEQA analyses, and habitat mitigation planning and implementation. Representative clients include:

Experience
Staff Arborist, Carlberg Associates, 2020 – Present
Over two dozen Environmental, Biological, Nesting Bird, and Restoration Surveys, 2010 – 2020
Biologist, Harmsworth Associates, 2015 – 2017
Biologist, Arroyo Trabuco Golf Club, 2010 – 2015

Certificates
Wildland Resources and Forestry Certificate Program, 2011

AREAS OF EXPERTISE

Mr. Cowell is experienced in the following areas of environmental and arboricultural monitoring, management and preservation:

- Evaluation of trees for preservation and encroachment during construction
- Inventories & reports for native and non-native trees
- Construction monitoring and reporting
- Post-fire inventories and assessments for native and non-native trees
- Environmental consulting, survey, and compliance monitoring & reporting
- Performance of nesting bird surveys
- Native vegetation and wildlife protection, hazardous materials spill prevention, non-native vegetation spread prevention, and fire management practices
- Creation of mitigation strategies for impacts to wetlands and waters
- Inspection of trees and vegetation near power lines to determine species, growth rates, hazards,
- and making pruning and removal decisions.
- Development of environmental education programs and training of volunteers

PREVIOUS CONSULTING EXPERIENCE

Mr. Cowell has performed hundreds of nesting bird surveys and other environmental studies and monitoring for counties, cities, water districts, resource conservation districts, and utility companies, as well as private developers and professional consultants. He has over 13 years of experience in biology and is trained in environmental planning, state and federal regulatory permitting, and habitat mitigation planning and implementation. Representative clients include:

University of California, Irvine
The Irvine Company
The County of Orange
The County of Orange
The Nature Conservancy
City of Santa Clarita
City of Beaumont
City of Chino Hills
City of Twenty-nine Palms
Arroyo Trabuco Golf Club
Newhall County Water District
First Carbon Solutions
Traveland USA
Irvine Ranch Water District
Endemic Environmental Services
San Diego Gas & Electric
City of Moreno Valley
City of Costa Mesa
City of Newport Beach
City of Murietta
City of Garden Grove
Resource Conservation District of the Santa Monica Mountains
Land Design Consultants
Burrtec, Inc.
The Claremont Colleges
Environmental Intelligence

AFFILIATIONS

Mr. Cowell is affiliated with the following national and regional professional organizations:

- Rancho Santa Ana Botanical Gardens, Claremont (volunteer since 2010)
- California Native Plant Society (San Gabriel Mountains and Orange County Chapters)
- Theodore Payne Foundation for California Wildflowers and Native Plants

EXHIBIT E – DEFINITION OF HEALTH AND STRUCTURE GRADES

Health and structure ratings of the trees are based on the archetype tree of the same species through a subjective evaluation of its physiological health, aesthetic quality, and structural integrity.

Overall physiological condition (health) and structural condition were rated A-F:

Health

A) Outstanding – Exceptional trees of good growth form and vigor for their age class; exhibiting very good to excellent health as evidenced by normal to exceptional shoot growth during current season, good bud development and leaf color, lack of leaf, twig or branch dieback throughout the crown, and the absence of decay, bleeding, or cankers. Common leaf and/or twig pests may be noted at very minor levels.

B) Above average – Good to very good trees that exhibit minor necrotic or physiological symptoms of stress and/or disease; shoot growth is less than reasonably expected, leaf color is less than optimal in some areas, the crown may be thinning, minor levels of leaf, twig, and branch dieback may be present, and minor areas of decay, bleeding, or cankers may be manifesting. Minor amounts of epicormic growth may be present. Minor amounts of fire damage or mechanical damage may be present. Still healthy, but with moderately diminished vigor and vitality. No significant decline noted.

C) Average – Average, moderately good trees whose growth habit and physiological or fire-induced symptoms indicate an equal chance to either decline or continue with good health into the near future. Most of these trees exhibit moderate to significant small deadwood in outer crown areas, decreased shoot growth and diminished leaf color and mass. Some stem and branch dieback are usually present and epicormic growth may be moderate to extensive. Cavities, pockets of decay, relatively significant fire damage, bark exfoliation, or cracks may be present. Moderate to significant amounts of insect or disease symptoms may be present; the tree may be shaded or crowded in such a way that it is expected to negatively impact the lifespan of the tree. Tree may be in early decline.

D) Below Average/Poor - trees whose growth habit and physiological or fire-induced symptoms indicate significant, irreversible decline. Most of these trees exhibit significant dieback of wood in the crown, possibly accompanied by significant epicormic sprouting. Shoot growth and leaf color and mass is either significantly diminished or nonexistent throughout the crown. Cavities, pockets of decay, significant fire damage, bark exfoliation, and/or cracks may be present. Significant amounts of insect or disease symptoms may be present; the tree may be shaded or crowded in such a way that it has negatively impacted the lifespan of the tree. Tree appears to be in irreversible decline.

F) Dead or in spiral of decline – this tree exhibits very little to no signs of life.

STRUCTURE

A) Outstanding – Trees with outstanding structure for their species exhibit trunk and branch arrangement and orientation that result in a sturdy form or architecture that resists failure under normal circumstances. The spacing, orientation, and size of the branches relative to the trunk are quintessential for the species and free from defects. No outward sign of decay or pathological disease is present. Some trees exhibit naturally inherent branching defects, like multiple, narrow points of attachment from one point on the trunk, which would preclude them from achieving an "A" grade.

B) Above average - Trees with good to very good structure for their species. They exhibit trunk and branch arrangement and orientation that result in a relatively sturdy form or architecture that resists failure under normal circumstances, but may have some mechanical damage, over-pruning, or other

minor structural defects. The spacing, orientation, and size of the branches relative to the trunk are still in the normal range for the species, but they exhibit a minor degree of defects. Minor, sub-critical levels of decay or pathological disease may be present, but the degree of damage is not yet structurally significant. Trees that exhibit naturally inherent branching defects, like multiple, narrow points of attachment from one point on the trunk, would generally fall in to this category. A small percentage of the canopy may be shaded or crowded, but not in such a way that it is expected to negatively impact the structural integrity or lifespan of the tree.

C) Average - Trees with moderately good structure for their species, but with obvious defects. They exhibit trunk and branch arrangement and orientation that result in a less than sturdy form or architecture, which reduces their resistance to failure under normal circumstances. Moderate levels of mechanical damage, over-pruning, or other structural defects may be present. The spacing, orientation, and size of some of the branches relative to the trunk are not in the normal range for the species. Moderate to significant levels of decay or pathological disease may be present that increase the likelihood of structural instability. Influences such as an excessive trunk lean, slope erosion, root pruning, or other growth-inhibiting factors may be present. A moderate to significant percentage of the canopy may be shaded or crowded in such a way that it is expected to negatively impact the structural integrity or lifespan of the tree. Risk of full or partial failure in the near future appears to be moderately elevated.

D) Well Below Average/Poor - Trees poor structure for their species and with obvious defects. They exhibit trunk and branch arrangement and orientation that result in a significantly less than sturdy form or architecture, significantly reducing their resistance to failure under normal circumstances. Significant levels of mechanical damage, over-pruning, or other structural defects may be present. The spacing, orientation, and size of many of the branches relative to the trunk are not in the normal range for the species. Significant levels of decay or pathological disease may be present that increase the likelihood of structural instability. Influences such as an excessive trunk lean, slope erosion, root pruning, or other growth-inhibiting factors may be present. A significant percentage of the canopy may be shaded or crowded in such a way that it is expected to negatively impact the structural integrity or lifespan of the tree. Risk of full or partial failure in the near future appears to be advanced.

F) Severely Compromised – trees with very poor structure and numerous or severe defects due to growing conditions, historical or recent pruning, mechanical damage, history of limb or trunk failures, advanced decay, disease, or severe fire damage. Risk of full or partial failure in the near future appears to be severe.

EXHIBIT F - GLOSSARY OF ARBORICULTURAL & DENDROLOGICAL TERMS

Abiotic: Non-living agents including environmental, physiological, & other nonbiological factors (i.e., aeration or water deficit, mechanical injury, or gas line leak).

Arboriculture: Management of individual trees or groups of trees primarily for their amenity value.

Basal wound: A cut or puncture at the base of the trunk of a tree, particularly bad in younger (developing) specimens. Often these wounds are caused by mowers and other gardening equipment and can be prevented by protective staking and the creation of dirt (no turf) surrounding areas - adjacent to the trunk.

Bleeding (from wood): Flow of sap, typically from pruning wounds.

Branch collar: The swelling at the base of a branch, to be left intact in any pruning.

Callus / wound wood: Lignified, partially differentiated tissue which develops from the callus associated with wounds.

Cambium / cambial: Meristematic tissue that gives rise to phloem & xylem.

Canker: An area of dead or malformed bark caused by a pathogen.

Canopy: A term used for the crown or spread of a tree's branches to emphasize its size and enclosing character. Parts of the tree above the trunk, including scaffold limbs, lateral branches, twigs, and leaves.
The canopy spread is often measured in feet.

Cavity: A void in a tree trunk, branch or root that may or may not be open to the exterior, generally created by decay. Over many years the wound may become entirely grown over (occluded) while the decay progresses within.

Co-dominant stems: Branches and *stems* that are nearly equal in size and relative importance

Compartmentalization: A form of defense in woody plants, in which barriers resistant to invasion by pathogens or wood decay fungi are laid down while the wood is living (sapwood), and which continue to act passively once the wood is incorporated into heartwood.

Conifer: A botanical definition embracing trees with cones (ie. seeds not formed within ovaries), mostly with needle-like or scale-like leaves and mostly evergreen. Sometimes conifers are called 'softwoods'.

Crotch: Where two branches of a tree intersect. A narrow crotch arise at an acute (narrow) angle, as when both branches are close to the vertical. The union is relatively weak if there is included bark.

Crown: The branches, twigs and foliage of a tree, considered collectively.

Crown thinning, crown reduction and crown raising: Crown thinning removes branches from the crown without reducing the extent of the crown. Crown reduction decreases the extent of the crown without decreasing its density. Crown raising increases the headroom to the base of the canopy by removing lower branches.

Crown cleaning: The removal of dead, dying, damaged or diseased wood from the crown of a tree.

Deadwood: In the growth and development of a tree, branches compete with each other and weaker branches are eventually suppressed and die. The deadwood is then liable to fall (sometimes called 'natural pruning'). Deadwood develops naturally, largely in the inner and lower crown, of all trees that are mature and unmanaged.

Decay: The progressive degradation of woody tissues caused by specialized fungi & bacteria through decomposition of cellulose & lignin. The pathogen typically enters through wounds in the roots (root rots), main stem or branches (butt and stem rots) and can then extend internally, over a timescale of years or decades, longitudinally or horizontally.

Deciduous: Leaves are lost in winter, as opposed to evergreen.

Diameter at breast height (dbh): The diameter of a tree measured at height 4.5 feet above natural grade. Typically used as a representation of tree size.

Dieback: Death of shoots or roots starting at the extremities.

Dripline: The outermost edge of the tree's canopy. When depicted on a map, the dripline will appear as an irregular shape that follows the contour of the tree's branches as seen from overhead.

Epicormic shoots: Shoots arising from the base of a tree, its trunk or main framework branches, from buds dormant more than one season. May be stimulated by pruning (which increases the light reaching the lower part of the tree), or indicative of damage or decline in the upper crown.

Evergreen: Foliated throughout the year (although there is a gradual turnover of leaves).

Flush cut: A pruning cut that removes the branch collar and/or part of the branch ridge, slowing the occlusion of the wound or damaging its compartmentalization.

Framework: Typically, the main branches (sometimes also called scaffold branches), each of which supports a significant portion of the crown. They largely determine the shape of the tree's crown depending on their height of origin, orientation etc. There is no precise distinction between framework branches and other lesser branches.

Gall: Abnormal growth of leaves, buds, stems etc. in reaction to the presence of an intrusive parasite, often an insect or mite.

Girdle/girdling: Damage that kills the bark all the way round the stem; such as caused by wires or ties that were never removed when the tree was young. That which circles & constricts the stem or roots causing death of phloem &/or cambial tissue.

Habit (growth habit): Giving a tree its characteristic form, for example owing to the stoutness and orientation (fastigiated, ascending, spreading, pendulous, weeping etc.) of a tree's branches.

Hanger: Dead branch fallen from the crown but caught by, and resting on, branches lower down, which be liable to fall.

Heart rot: Decay in the center of the tree (heartwood).

Included bark: Areas of bark on adjacent parts of a tree, typically on the inner faces of a narrow fork, which becomes grown over to occupy part of the internal joint. The bark-to-bark contact is weaker than the more usual woody union.

Lateral branch / limb: The next order of branch that rises from the scaffold limbs.

Leader: The topmost vertical shoot of a tree, present if the tree has strong apical dominance, characteristic of young trees and conifers. Trees with a rounded crown have no leader.

Mulch: a material (such as decaying leaves, bark, or compost) spread around or over a plant to enrich or insulate the soil.

Parasite: An organism that exploits another, e.g., for food, to the prejudice of the host. Parasites may kill their hosts, be pathogenic or have little significant effect.

Pathogen: A kind of parasite that causes disease.

Phloem: A transport tissue characterized by sieve tubes and companion cells, found the vascular bundles of higher plants. Functions in the transport of dissolved organic substances by translocation.

Photosynthesis: The chemical process by which chlorophyll-containing plants use light to convert carbon dioxide and water into carbohydrates, releasing oxygen as a by-product.

Pruning: The cutting off or cutting back of shoots or branches from a tree, whether to direct growth (formative pruning), make safe, to remove an obstructing or diseased part, to increase longevity (veteran trees), to maintain productivity (fruit trees) etc.

Root crown /collar / Root flare: The outwardly curving base of a tree where it joins the roots, often distinguishable as individual root buttresses.

Root crown inspection: Extensive examination of the junction of root & stem, including the area immediately below, aimed at determining stability, presence of disease, decay, etc.

Root zone: The area of ground around the base of a tree that supports root growth; often extends far beyond the dripline of a tree.

Scaffold branch / limb: The first order of limbs or branches that arise from the trunk of a tree.

Soil: A mixture of mineral particles, often of various sizes due to weathering, roots and other living things, soil organic matter and the associated voids (pores) filled with air and/or water.

Soil aeration: The movement of gases in soil, primarily by diffusion through the soil pores. For example, oxygen diffuses from the atmosphere to the vicinity of the plant root while carbon dioxide diffuses in the opposite direction. The rate of diffusion is related to the proportion of the soil volume that contains air

Soil compaction: An increase in bulk density due to the pressure exerted by animals, vehicles, (locally) by root growth *etc*. Pore space is reduced, which may also restrict soil aeration, water infiltration and drainage.

Soil structure: The aggregation of soil particles into clumps (peds) of various shapes and the associated spaces between them, affecting many properties of soil including its porosity to air and water, and its fertility.

Soil texture: The size of the mineral particles in the soil, classified (from fine to coarse) as clay, silt, sand, gravel or stones, or some mixture of these to give a characteristic particle size distribution. Sandy soils give a light texture, clayey soils give a heavy texture.

Stub: That part of a pruned branch protruding beyond the branch collar. It is not good practice to leave stubs since they impede occlusion and are prone to decay.

Suckers: Shoots arising from the roots of a tree, which can arise surprisingly far from the parent.

Target: A target is the subject of injury or damage within range of a tree hazard

Topping: A kind of pruning in which the branches of a tree are all decapitated to reduce the tree to a specific height. An indiscriminate form of pruning not regarded as good practice, to which some trees, such most conifers, are intolerant.

Training: To change the shape of a tree by means other than (formative) pruning, typically by tying young branches into a particular position.

Transpiration: Loss of water vapor from the surface of leaves & other aboveground parts of the plant.

Vigor / vigorous: Overall health; the capacity to grow & resist physiological stress.

EXHIBIT G – LIST OF ACRONYMS

ANTH – Anthracnose disease

BT – brown trunk – commonly used to measure palm tree trunk heights instead of diameters; it excludes the palm head, or canopy

CANK – canker – an area of dead tissue; can be caused by sunburn or disease

CLPD – common leaf pests and diseases (usually subcritical and non-lethal to tree)

COD – codominant stems or trunks – similar diameter trunks or stems arising from the same point of origin – can be a defect depending on the angle of attachment

Compass directions – N=north, E=east, S=south, W=west

DBH – Diameter at breast height (4 ft. 6 in. from grade) – a standard forestry term / protocol used for measuring tree trunk diameter

DSH – Diameter Standard Height – same as DBH but politically correct without the reference to breasts

DN – drippy nut (acorn) disease (common and non-lethal bacterial infection of acorns)

DW – dead wood

EG – epicormic growth – usually stress-induced growth that originates from previously dormant buds located on trunks or branches

GR – girdling root – can cause structural instability

HOB – history of breakage – usually refers to branches, not twiggy growth

HR – heart rot – decay of the heartwood

H2O – water or irrigation

IB – included bark – can cause structurally weak attachments

LCR – live crown ratio – a ratio of canopy foliage to bare trunk – informs structural grade, as low LCR can increase likelihood of failures

Lerp psyllid / Tipu psyllid – sap sucking insects

Lg - large

MBA – multiple branch attachments – can be a structural defect

Mech. Dam or MD – mechanical damage

MPE – multiple pruning events – can lead to reduced structural integrity based on secondary growth characteristics

P/D – pest/disease

PP – poor pruning – usually refers to stub cuts, flush cuts, excessive thinning, topping, etc.

Prune/DPR-QA - prune out dead/infested/diseased portion(s) & consult a licensed Department of Pesticide Regulation Qualified Applicator for potential chemical pest/disease treatments

RRD – root rot disease

SB – sycamore borer – a clear-winged moth that lays eggs on the bark of trees (mostly sycamore and oak species) – larvae burrow and feed in bark layer, usually non-damaging to tree

SS – stump sprouts – epicormic growth that arises from cut trunks – can originate from the remaining trunk tissue or the root crown

T – trunk

TG – Twig girdler – a stem girdling insect (this condition may also be noted under the umbrella of 'CLPD'

Topping cuts – refers to the substandard practice of arbitrarily pruning with no regard to lateral branch points; can include excessive and disfiguring pruning

WW – wound wood – callus tissue growing over a wound

Xylella = suspected bacterial infection with Xylella fastidiosa

EXHIBIT H – TREE INVENTORY FIELD DATA

THE FOLLOWING SHEETS ARE 11" X 17"

TABLE 7 – TREE FIELD DATA AND PROPOSED DISPOSITIONS
(THIS TABLE IS 11" X 17")

Street Tree/ Offsite/Private Property (ST, OS, PP)	Tree ID No.	Common Name	Botanical Name	DSH / DBH (in.)	BT Ht. (palms/palm-like) (Ft.)	DSH < 4" or Sapling	Height (Ft.)	Canopy N (Ft.)	Canopy E (Ft.)	Canopy S (Ft.)	Canopy W (Ft.) 1. Executive Summary

1.1 Introduction

Architectural Resources Group (ARG) has prepared this Historical Resources Technical Report ("Technical Report") for the ROW DTLA Residential Project ("the Project"). The Project Site ("Project Site," or "Site") is located in the Central City Community Plan Area (CPA) of the City of Los Angeles, with the following addresses: 757-787 S. Alameda Street, 1318-1396 E. 7th Street, 736-796 S. Central Avenue, 1301-1327 E. 8th Street, 700-760 S. Market Court, 720-746 S. Terminal Street, and 760 S. Warehouse Street. The Site consists of three large, irregularly shaped parcels that collectively measure approximately 31 acres and occupy roughly the northern half of the block bounded by S. Central Avenue to the west, S. Alameda Street to the east, E. 7th Street to the north, and E. Olympic Boulevard to the south. The partially vacated E. 8th and Bay streets provide internal access within the middle of the current block.

The Site is composed of an industrial complex historically called the Los Angeles Union Wholesale Terminal, previously owned by the Southern Pacific Railroad, which currently encompasses a total of eight buildings, including seven large industrial buildings that were constructed between 1917 and 1923, and a parking garage constructed in 2016. The Los Angeles Union Wholesale Terminal (without the parking structure) was formally determined eligible for the National Register of Historic Places (National Register) in 1997 through the Section 106 review process, and is therefore listed in the California Register of Historical Resources (California Register) as the Los Angeles Union Wholesale Terminal District (the "District").[1]

The east half of the Site, east of the District buildings, consists of two paved surface parking lots on either side of the property's Center Street entrance (off of Alameda Street). The parking lots were constructed in the 1980s and do not contribute to the District.

Project Overview

The Project proposes a mixed-use development on two non-historic, paved surface parking lots (referred to herein as the "North Lot" and "South Lot") along S. Alameda Street between E. 7th Street and Bay Street/E. 8th Street, within the District boundary. Specifically, the Project would consist of two new eight-story mixed-use buildings and one new eight-story multi-family residential building (referred to herein as "Buildings A, B, and C") that would comprise 1,000 total residential units, 1,000 parking spaces, and 6,131 square feet of retail and café space. Buildings A and B would be constructed on the South Lot, and Building C would be constructed on the North Lot. Building A would include 1,267 square feet of commercial space at the first floor; 417 residential units at the first through eighth floors; and two levels of subterranean parking. Building B would include 216 residential units at the first through eighth floors and two levels of subterranean parking. Building C would consist of 4,946 square feet of commercial space at the

[1] Properties formally determined eligible for listing in the National Register of Historic Places through the Section 106 review process, and which have received consensus from the State Historic Preservation Officer (SHPO), are automatically listed in the California Register of Historical Resources.

first floor; 367 residential units at the first through eighth floors; and one level of subterranean parking. Refer to *Section 6.3* for a more detailed description of the Project.

Summary of Findings

This Technical Report has been prepared to fulfill the requirements of the California Environmental Quality Act (CEQA) as they relate to a proposed project's potential impacts on historical resources. CEQA states that "a project that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment."[2] An evaluation of potential impacts under CEQA includes both a determination of whether, and the extent to which, historical resources as defined by CEQA are present on and in the vicinity of the Site and, if so, the identification of potential impacts to historical resources that may be caused by the Project.

The Project Site is co-extensive with the District. The District was formally determined eligible for the National Register in 1997 through the Section 106 review process. It is therefore listed in the California Register and meets the definition of a historical resource for the purposes of CEQA.[3]

In addition to the historical resource on the Project Site, there are 12 historical resources (or potential historic resources) located in the vicinity of the Site. For these purposes, "vicinity" is loosely defined as directly adjacent to the Site and/or within view of or from the Site. As stated below, ARG did not conduct an independent analysis of eligibility of any of these 12 resources. Rather, for the purposes of this Technical Report, the properties are presumed to be historical resources for a conservative analysis of potential indirect impacts. The following identified historical resources (or potential historical resources) are within the vicinity of the Site:

1. 1013 ½ S. Central Avenue, commercial building (Booker T. Washington Building, 1916): Identified through SurveyLA (2016) as potentially individually eligible; more research needed

2. 1122 E. 7th Street, post office (United States Post Office – Market Station, 1940): Identified through SurveyLA (2016) as individually eligible for National Register listing

3. 1201-1203 E. 8th Street, commercial building (1928): Identified through SurveyLA (2016) as individually eligible for California Register listing

4. 1226 E. 7th Street, commercial/hotel building (1925): Identified as individually eligible through a Determination of Eligibility (2001) report prepared for receipt of federal funding through the U.S. Department of Housing and Urban Development (HUD)

[2] California Public Resources Code, Section 21084.1.

[3] Properties formally determined eligible for listing in the National Register of Historic Places through the Section 106 review process, and which have received consensus from the State Historic Preservation Officer (SHPO), are automatically listed in the California Register of Historical Resources. Under California Public Resources Code, Section 21084.1, a resource listed in the California Register of Historical Resources is "an historical resource."

5. 1205 E. 6th Street, mixed-use commercial building (Monday Women's Club, 1912): Identified through SurveyLA (2016) as eligible as a contributor to the Downtown Los Angeles Industrial Historic District and as potentially individually eligible; more research needed[4]

6. 1617 E. 7th Street, industrial building (Sperry Flour Co., Angeles Mill, 1903): Identified through SurveyLA (2016) as eligible as a contributor to the Downtown Los Angeles Industrial Historic District and as individually eligible for National Register listing

7. 1745 E. 7th Street, industrial building (Diamond Walnut Company, 1921): Identified through SurveyLA (2016) as eligible as a contributor to the Downtown Los Angeles Industrial Historic District and as individually eligible for National Register listing

8. 1753 E. Olympic Boulevard, industrial building (Western Electric Company, 1925): Identified through SurveyLA (2016) as individually eligible for National Register listing

9. 1807 E. Olympic Boulevard, industrial building (Overland Terminal Produce Warehouse, 1931): Identified through SurveyLA (2016) as individually eligible for California Register listing

10. Air Raid Siren No. 189, non-parcel resource, southwest corner of 8th Street and McGarry Street (1940): Identified through SurveyLA (2016) as individually eligible for National Register listing

11. Downtown Los Angeles Industrial Historic District, industrial district, generally bounded by E. 1st Street on the north, Santa Fe Avenue and Mateo Street on the east, E. 7th Street on the south, and S. Alameda Street on the west (1900-1940): Identified through SurveyLA (2016) as eligible for National Register listing

12. Central Wholesale Produce Market, produce market, generally bounded by 8th Street on the north, Olympic Boulevard on the south, Central Avenue on the east, and Kohler Street on the west (1927): Identified through SurveyLA (2016) as eligible for listing in the California Register as a historic district

ARG conducted an analysis of the Project and its potential to impact historical resources on and in the vicinity of the Project Site. In summary, ARG finds that the Project would not materially impair the significance of the District. The Project would not demolish, destroy, relocate, or alter any of the contributing buildings in the District, and the District and its contributing buildings would retain all of their character-defining features and would continue to have sufficient integrity to convey their significance following completion of the Project. ARG further finds that the Project would not materially impair the significance of any of the historical resources in the vicinity of the Site. Therefore, the Project would not have a significant impact on any historical resources on or in the vicinity of the Project Site.

[4] The Downtown Los Angeles Industrial Historic District was found eligible for listing in the National Register, California Register, and as a Los Angeles HPOZ through survey evaluation as part of SurveyLA in 2017. It has not been formally designated under any program.

1.2 Methodology

For the preparation of this Technical Report, ARG performed the following tasks for research, documentation, and analysis:

- Conducted a site visit of the subject property on December 21, 2023. During this time, the District buildings and overall Site context were photographed and notes were taken on their physical appearance and condition.
- Conducted a search in California's Built Environment Resource Directory (BERD), the City of Los Angeles's HistoricPlacesLA (HPLA) historic resources inventory database, and through the South Central Coastal Information Center (SCCIC) for previous surveys and evaluations of the subject property and surrounding properties.
- Reviewed state and local technical bulletins, ordinances, and other materials related to the evaluation of historical resources.
- Conducted primary and secondary source research related to the history of the District and Site.
- Analyzed the Project to determine whether it would result in any potential impacts to historical resources under CEQA.

ARG staff consulted the following archives and repositories as part of their research for this assessment: Los Angeles Public Library (multiple collections); the archives of the *Los Angeles Times* and other local periodicals; Los Angeles Department of Building and Safety Online Building Records; various online repositories; and ARG's in-house library. A complete list of references is included at the end of this report.

1.3 Preparer Qualifications

This report was prepared by Katie Horak, Principal, and Evanne St. Charles, Senior Associate, both of whom meet the *Secretary of the Interior's Professional Qualifications Standards*, 36 CFR Part 61, in the discipline of Architectural History.[5] Resumes for Ms. Horak and Ms. St. Charles are included in *Appendix A*.

[5] National Park Service, "Professional Qualifications Standards," accessed December 2023, https://www.nps.gov/articles/sec-standards-prof-quals.htm.

2. Property Description and Development

2.1 Site and Setting

The Project Site is located in an expansive industrial district east of Downtown Los Angeles. Since the late 19th century, this area has been an important node of industrial activity for the greater Los Angeles area, and particularly for industries related to the export and distribution of produce and food products. Today, the area surrounding the subject property is primarily developed with warehouses, cold storage facilities, small-scale manufacturing operations, and other industrial uses, though in more recent years newer commercial office, commercial retail, and residential uses have been developed in the vicinity of the Site. A smattering of early 20th century single-room occupancy (SRO) hotels can also be found nearby.

The Site consists of three large, irregularly shaped parcels that collectively measure approximately 31 acres in size (see Fig. 1, Project location map). It occupies the northern half of the block bounded by E. 7th Street on the north, S. Central Avenue on the west, S. Alameda Street on the east, and E. Olympic Boulevard to the south, with the partially vacated former E. 8th and Bay streets providing internal access within the middle of the block. The adjacent circulation network loosely ascribes to the skewed grid that characterizes Downtown Los Angeles and the adjacent neighborhoods that fell within the historical boundaries of the Los Angeles pueblo lands.

There are a total of eight buildings on the Site, seven of which are unified by their industrial use and utilitarian architectural vocabulary. The west end contains three long, two-story buildings (Buildings 1, 5, and 6) that span the northwest length of the Site and frame an inner court that was historically used as a wholesale produce market and is currently a paved parking area used for produce sales and an outdoor weekend market. These buildings are constructed of cast-in-place concrete and are divided into bays of equal width by engaged piers with tenon-like capitals. The westernmost building (along S. Central Avenue) is punctuated by broad, arched gateways that lead to the inner court.

On the northeast portion of the District are three large rectangular industrial buildings, which sit parallel to one another and are generally oriented north-south (Buildings 2-4). These buildings are six to seven stories tall and separated by narrow corridors.[6] They are constructed of cast-in-place concrete and are accentuated by segmented parapets and broad expanses of industrial sash windows. A seventh building is situated to the south of the westernmost six-story building (Building 7). It is four stories tall, constructed of cast-in-place concrete, and ascribes to a nearly identical architectural program as its adjacent counterparts.

The southeast portion of the Site is developed with a ten-story concrete parking structure (Building 8) that was built in 2016 and is accessed via S. Alameda Street. The structure is utilitarian in appearance.

[6] The easternmost building (Building 4) is seven stories tall, while the two western buildings are six stories tall. Due to grade changes on the site, the three buildings appear to be nearly identical in height.

The east portion of the Site (facing S. Alameda Street and the location of the proposed new construction) was historically developed with railroad spur lines, storage/train sheds, and other ancillary structures (demolished in the 1980s, per aerial photographs). It currently holds two non-historic, paved surface parking lots (North and South Lots) on either side of Center Street, which runs east-west through the property. The North and South Lots are surrounded by a metal perimeter fence and hedge.

Fig. 1. *Project location map. The Prcject Site is outlined in a dashed red line; District buildings are numbered 1-8; the general footprint cf the proposed new construction is outlined in blue (Google Maps; adapted by ARG, 2023).*

Fig. 2. *Photo Key, corresponding with photos below. The Project Site is outlined in a dashed red line; the general footprint of the proposed new construction (the North and South Lots) is outlined in blue (Google Maps; adapted by ARG, 2023).*

Photo 12. View west of the inner court (historically a wholesale produce market) towards Building 5 (ARG, 2023).

3. Historical Overview of the Project Site

The buildings and infrastructure constituting the District were developed in phases between 1917 and 1923.[7] During this period, Los Angeles was experiencing an increase in economic growth and industrialization that included development of a sizable industrial district to the south and east of the central business district. The construction of this property signified the important trends in industrial growth and development that were shaping the city at this time.[8]

The Project Site was owned by the Southern Pacific Railroad, a major power broker that held title to vast tracts of land in Los Angeles in the early 20th century. The company commissioned architect John Parkinson and the Wurster Construction Company to develop a complex of industrial buildings on the property that would collectively serve as a terminal and wholesale market. The market would provide a central location where goods entering the City of Los Angeles by train could be received, stored, and sold, all in proximity to major railroad and transportation corridors.[9]

The first buildings in the District, constructed in 1917, included the three two-story produce buildings at the west end of the property (Buildings 1, 5, and 6), and the two six-story warehouse buildings facing E. 7th Street (Buildings 2-3).[10] The lower-slung buildings were constructed as a wholesale market for fresh produce, while the taller buildings were constructed as warehouses for the receiving and storage of rail-based freight. A network of narrow, parallel corridors between the warehouse buildings accommodated the entry of freight trains on rail spurs. Goods were unloaded from trains and onto the loading docks at the base of each building.[11]

Development of the property continued in the early 1920s with the construction of a seven-story warehouse in 1920 (Building 4) and another four-story warehouse in 1923 (Building 7).[12] These buildings were also designed by Parkinson's architectural firm (which, by this time was known as Parkinson and Parkinson) and constructed by the Wurster Construction Company.[13]

The easternmost portion of the District was historically developed with low-slung storage sheds and other ancillary structures.[14] Sanborn fire insurance maps indicate that these ancillary structures were variously constructed of concrete, masonry, and wood and were used for the

packing, storage, and shipping of vegetables (see Figs. 3-5). This area of the property also contained large amounts of railroad tracks given its proximity to freight rail lines that arrived from the east. The ancillary structures and tracks were removed in the 1980s, according to aerial photographs.[15] The area now consists of paved surface parking and the contemporary, ten-story parking structure that was built in 2016.[16]

The District functioned as one of Southern California's foremost distribution hubs for produce and other industrial goods for decades following its completion. As trucking supplanted rail as the primary method of freight transport and distribution, the buildings and spaces between them continued to be used in the same manner as before, except that trucks – instead of rail spurs – used the loading docks.[17] In the late 2010s, the property was repurposed into an urban office, retail, and dining hub known as ROW DTLA.[18]

4. Regulatory Framework

4.1 Definition of Historical Resources

Pursuant to Section 15064.5 of the California Code of Regulations (CCR), Title 14, Chapter 3, the following are considered historical resources for the purposes of CEQA:

1. A resource listed in, or determined to be eligible by the State Historical Resources Commission, for listing in the California Register of Historical Resources (California Register).

2. A resource included in a local register of historical resources, as defined in Section 5020.1(k) of the California Public Resources Code (PRC), or identified as significant in an historical resource survey meeting the requirements in Section 5024.1(g) of the PRC, shall be presumed to be historically or culturally significant.

3. Any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered to be an historical resource, provided the lead agency's determination is supported by substantial evidence in light of the whole record. Generally, a resource shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for listing in the California Register (PRC SS5024.1; Title 14 CCR, Section 4852).

4.2 Federal, State, and Local Evaluation Criteria

National Register of Historic Places

The National Register is the nation's master inventory of known historic resources. Created under the auspices of the National Historic Preservation Act of 1966,[19] the National Register is administered by the National Park Service (NPS) and includes listings of buildings, structures, sites, objects, and districts that possess historic, architectural, engineering, archeological, or cultural significance at the national, state, or local level. As described in National Register Bulletin 15: *How to Apply the National Register Criteria for Evaluation*, in order to be eligible for the National Register, a resource must both (1) be significant and (2) retain sufficient integrity to convey its significance.

[19] 16 U.S.C 470 et seq., as amended.

Significance is assessed by evaluating a resource against established criteria for eligibility. A resource is considered significant if it satisfies any one of the following four National Register criteria:[20]

A. Associated with events that have made a significant contribution to the broad patterns of our history;

B. Associated with the lives of significant persons in our past;

C. Embodies the distinctive characteristics of a type, period, or method of construction, or that represents the work of a master, or that possesses high artistic values, or that represents a significant and distinguishable entity whose components may lack individual distinction;

D. Has yielded, or may be likely to yield, information important in prehistory or history.

Once significance has been established, it must then be demonstrated that a resource retains enough of its physical and associative qualities – or integrity – to convey the reason(s) for its significance. Integrity is best described as a resource's "authenticity" as expressed through its physical features and extant characteristics. Whether a resource retains sufficient integrity for listing is determined by evaluating it against the seven aspects of integrity defined by the NPS:[21]

- Location (the place where the historic property was constructed or the place where the historic event occurred);
- Setting (the physical environment of a historic property);
- Design (the combination of elements that create the form, plan, space, structure, and style of a property);
- Materials (the physical elements that were combined or deposited during a particular period of time and in a particular manner or configuration to form a historic property);
- Workmanship (the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory);
- Feeling (a property's expression of the aesthetic or historic sense of a particular period of time); and
- Association (the direct link between an important historic event/person and a historic property).

Integrity is evaluated by weighing all seven of these aspects together and is ultimately a "yes or no" determination – that is, a resource either retains sufficient integrity or it does not.[22] Some

[20] Some resources may meet multiple criteria, though only one needs to be satisfied for National Register eligibility. See National Register Bulletin 15: *How to Apply the National Register Criteria for Evaluation*, 2, https://www.nps.gov/subjects/nationalregister/upload/NRB-15_web508.pdf.
[21] National Register Bulletin 15, 44.
[22] National Register Bulletin 15, 44.

aspects of integrity may be weighed more heavily than others depending on the type of resource being evaluated and the reason(s) for its significance. Since integrity depends on a resource's placement within a historic context, integrity can be assessed only after it has been established that the resource is significant, and under which criteria.[23]

Generally, a resource must be at least 50 years of age to be eligible for listing in the National Register. Exceptions are made if it can be demonstrated that a resource less than 50 years old is (1) of exceptional importance or (2) is an integral component of a historic district that is eligible for the National Register.[24]

California Register of Historical Resources

The California Register is the authoritative guide to the State's significant historical and archeological resources. In 1992, the California legislature established the California Register "to be used by state and local agencies, private groups, and citizens to identify the state's historical resources and to indicate what properties are to be protected, to the extent prudent and feasible, from substantial adverse change."[25] The California Register program encourages public recognition and protection of resources of architectural, historical, archeological, and cultural significance; identifies historical resources for state and local planning purposes; determines eligibility for historic preservation grant funding; and affords certain protections under CEQA.

All resources listed in or formally determined eligible for the National Register are automatically listed in the California Register.[26] State Historic Landmarks #770 and forward are also automatically listed in the California Register.[27] In addition, properties designated under municipal or county ordinances, or through local historic resources surveys, are eligible for listing in the California Register.[28]

The structure of the California Register program is similar to that of the National Register, but places its emphasis on resources that have contributed specifically to the development of California. To be eligible for the California Register, a resource must first be deemed significant at the local, state, or national level under one of the following four criteria, which are modeled after the National Register criteria listed above:

1. It is associated with events or patterns of events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States;

2. It is associated with the lives of persons important to local, California, or national history;

[23] National Register Bulletin 15, 44-45.
[24] National Register Bulletin 15, 42.
[25] California Public Resources Code, Section 5024.1 (a).
[26] California Public Resources Code, Section 5024.1 (d)(1).
[27] California Public Resources Code, Section 5024.1 (d)(2); California Office of Historic Preservation, *Technical Assistance Series #5: California Register of Historical Resources, The Listing Process* (Sacramento, CA: California Department of Parks and Recreation, n.d.), 1.
[28] California Public Resources Code, Section 5024.1 (e)(4).

3. It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of a master, or possesses high artistic values;

4. It has yielded, or has the potential to yield, information important to the prehistory or history of the local area, state, or the nation.[29]

Like the National Register, the California Register also requires that resources retain sufficient integrity to be eligible for listing. A resource's integrity is assessed using the same seven aspects of integrity used for the National Register. However, since integrity thresholds associated with the California Register are generally less rigid than those associated with the National Register, it is possible that a resource may lack the integrity required for the National Register but still be eligible for listing in the California Register.[30]

There is no prescribed age limit for listing in the California Register, although California Register guidelines state that "sufficient time must have passed to obtain a scholarly perspective on the events or individuals associated with the resource."[31]

City of Los Angeles, Cultural Heritage and Historic Preservation Overlay Zone Ordinances

The local designation programs for the City of Los Angeles include Historic-Cultural Monument (HCM) designation for individual resources and the adoption of Historic Preservation Overlay Zones (HPOZs) for concentrations of buildings, commonly known as historic districts. The City of Los Angeles Cultural Heritage Ordinance (Chapter 9, Section 22.171 *et seq.* of the Los Angeles Administrative Code) defines an HCM as any site (including significant trees or other plant life located thereon), building, or structure of particular historic or cultural significance to the City, meaning that it meets one or more of the following criteria:

1. Is identified with important events of national, state, or local history, or exemplifies significant contributions to the broad cultural, economic or social history of the nation, state, city or community;

2. Is associated with the lives of historic personages important to national, state, or local history;

[29] California Public Resources Code 5024.1(c); Title 14 CCR, Section 15064.5(a).
[30] California Office of Historic Preservation, *Technical Assistance Series #6: California Register and National Register: A Comparison* (Sacramento, CA: California Department of Parks and Recreation, 2001), 2, https://ohp.parks.ca.gov/pages/1069/files/technical%20assistance%20bulletin%206%202011%20update.pdf.
[31] California Office of Historic Preservation, *Technical Assistance Series #6: California Register and National Register: A Comparison*, 3. According to the *Instructions for Recording Historical Resources* (Office of Historic Preservation, March 1995), "Any physical evidence of human activities over 45 years old may be recorded for purposes of inclusion in the OHP's filing system. Documentation of resources less than 45 years old may also be filed if those resources have been formally evaluated, regardless of the outcome of the evaluation." This 45-year threshold is intended to guide the recordation of potential historical resources for local planning purposes, and is not directly related to an age threshold for eligibility against California Register criteria.

3. Embodies the distinctive characteristics of a style, type, period, or method of construction; or represents a notable work of a master designer, builder, or architect whose individual genius influenced his or her age.

The City of Los Angeles established its HPOZ ordinance in 1979. The ordinance was revised in 1997, 2000, 2004, and 2018. According to Section 12.20.3.B.17 of the Los Angeles Municipal Code (LAMC), a *Preservation Zone* is "any area of the City of Los Angeles containing buildings, structures, landscaping, natural features or lots having historic, architectural, cultural or aesthetic significance."

Local historic preservation ordinances often include standards for determining whether a resource retains sufficient integrity to merit local historic designation, and this language can vary widely from municipality to municipality. Some local ordinances do not mention integrity at all. The Los Angeles Cultural Heritage Ordinance does not include language about integrity. When evaluating historical resources in municipalities where the historic preservation ordinance does not provide guidance for assessing integrity, in accordance with best professional practices, it is customary to use the National Register's seven aspects of integrity to assess whether or not a resource retains sufficient integrity to convey its significance at the local level. ARG's experience with the City's Historic-Cultural Monument criteria is that the City does consider integrity in determining whether a historical resource qualifies as an HCM, but practices greater flexibility when evaluating integrity for local designation than is the case for determining state or federal eligibility.

As with the National and California Registers, in assessing integrity at the local level, some aspects may be weighed more heavily than others depending on the type of resource being evaluated and the reason(s) for its significance. For example, if a property is significant as an excellent example of an architectural style, integrity of design, workmanship, and materials may weigh more heavily than integrity of setting. In contrast, if a property is significant for its association with an important event or person, then integrity of setting, feeling, and association may weigh more heavily than integrity of design.

5. Summary of Historical Significance

5.1 Previous Designations and Studies

In 1997, the subject property was evaluated for historical significance through the Section 106 review process (Historic Resources Group, Determination of Eligibility, Los Angeles Union Terminal District, 1997). From that evaluation, the entire property bounded by E. 7th, E. 8th, and S. Alameda streets (north, south, east) and S. Central Avenue (west), named the Los Angeles Union Terminal District, was determined eligible for listing in the National Register as a historic district under Criteria A and C, as follows:

> Constructed between 1917 and 1923, the Los Angeles Union Terminal District is an intact example of buildings constructed for closely related uses by the railroad, defining transportation, wholesale, and storage methods in the early twentieth century. As such, it is a significant and distinguishable entity and eligible for listing in the National Register under Criterion A. The buildings in the District are also excellent examples of early twentieth century industrial architecture. The District therefore is significant under National Register Criterion C because its individual components embody the distinctive characteristics of a type. All of the contributing buildings within the district were designed by John Parkinson, the most prolific and important architect in Los Angeles during the period in which they were built. As the buildings are closely related by use, similar in appearance, designed by the same architectural firms, and built by the same construction company, they were evaluated as an historic district rather than as individual resources.[32]

The period of significance identified for the District is 1917 to 1923, reflecting the period during which all contributing buildings within the District were constructed.

Consistent with the Section 106 Review process, the Los Angeles Union Terminal District in its entirety was assigned a status code of 2S2 (determined eligible for the National Register by consensus, and listed in the California Register), and all buildings within the complex at that time were identified as contributing features (see Fig. 6). Therefore, the District satisfies the definition of a "historical resource" for purposes of CEQA.

None of the buildings on the property has been formally designated under the City of Los Angeles' Cultural Heritage or Historic Preservation Overlay Zone ordinances.

[32] "Determination of Eligibility, Los Angeles Union Terminal District," prepared Jul. 17, 1997 by Historic Resources Group.

Fig. 6. Los Angeles Union Wholesale Terminal District. The District boundary is outlined in red, and the seven buildings outlined in yellow were identified as contributors to the District. The 2016 parking structure, outlined in purple, is a non-contributor (it was not present at the time of the District's evaluation) (Google Earth; adapted by ARG, 2023).

5.2 Character-Defining Features

Character-defining features are those physical elements of a resource that define its historic character and help to convey its significance. In instances of future change to a historic resource, character-defining features should be retained to the greatest extent feasible in order to ensure that a resource can continue to physically represent its historical period.

Previous documentation of the District does not identify character-defining features of the District or any of its contributing buildings. For the purposes of this study and its analysis of the Project's potential impacts, ARG has determined that the following are the character-defining features of the District and its contributing buildings:

- Siting of buildings on the west portion of the property, deeply set back from S. Alameda Street

- Relationship between contributing buildings, including long narrow corridors separating buildings
- Inner court that was historically used as a wholesale produce market (west end)
- Narrow footprints and linear north-south arrangement of contributing buildings
- Historic industrial use and utilitarian architectural vocabulary of contributing buildings, including flat roofs, cast-in-place concrete exterior walls, loading docks (where present), and repetitive, industrial steel sash windows
- Beaux Arts detailing (symmetrical façades, pilasters, stepped parapets, truncated corner towers) at the north and south ends of the six and seven-story buildings fronting on E. 7th Street
- Arched gateways at the westernmost building that lead to the inner court

5.3 Historical Resources Records Search

ARG conducted a records search for the Project Site and a quarter-mile radius around the Site at the South Central Coastal Information Center (SCCIC) in December 2023. ARG's search did not identify any known prehistoric or historic archaeological resources within a quarter-mile radius of the Site. The historic built environment resources identified on the Site include the District, already described herein. No other historic built environment resources were identified on the Site. ARG's search in the SCCIC identified 15 built environment resources[33] within a quarter-mile radius around the Site; however, all of these resources had been found ineligible for designation at the federal, state, and/or local level through survey or the Section 106 process (assigned 6Y and 6Z status codes)[34] and are thus excluded from further evaluation in this Technical Report. (see *Appendix B* for resource reports obtained through the SCCIC records search).

Concurrently with the SCCIC records search, ARG conducted a search of the BERD database, as well as of the City of Los Angeles's HPLA historic resources inventory database, for historic built environment resources within a quarter-mile radius around the Site. In addition to the historic built environment resources identified through the SCCIC search, ARG's search located 17 potentially eligible historic resources, including 13 individual resources, two historic districts, and two non-parcel resources (historic air raid sirens) within a quarter-mile radius of the Project Site.

Of the resources identified through the SCCIC records search and ARG's BERD and HPLA searches as being located within a quarter-mile radius around the Site, 12 historical resources (or potential historical resources) are located in the "vicinity" of the Project Site. For these purposes, "vicinity" is generally defined as directly adjacent to the Site and/or within view of or from the Site. ARG did not conduct an independent analysis of the eligibility of any of these 12 resources. Rather, for the purposes of this Technical Report, the following resources are presumed to be historical resources for a conservative analysis of potential indirect impacts. The following 12 identified historical resources are within the vicinity of the Site:

[33] One of the resources identified as ineligible—La Kretz Innovation Campus, 500-542 S. Colyton Street—is composed of multiple buildings. See *Appendix B*.

[34] The building at 901-905 E. 6th Street (Rossmore Hotel) was identified as ineligible for National and California Register listing, but was not assigned a status code. See *Appendix B*.

1. 1013 ½ S. Central Avenue, commercial building (Booker T. Washington Building, 1916): Identified through SurveyLA (2016) as potentially individually eligible; more research needed

2. 1122 E. 7th Street, post office (United States Post Office - Market Station, 1940): Identified through SurveyLA (2016) as individually eligible for National Register listing

3. 1201-1203 E. 8th Street, commercial building (1928): Identified through SurveyLA (2016) as individually eligible for California Register listing

4. 1226 E. 7th Street, commercial/hotel building (1925): Identified as individually eligible through a Determination of Eligibility (2001) report prepared for receipt of federal funding through the U.S. Department of Housing and Urban Development (HUD)

5. 1205 E. 6th Street, mixed-use commercial building (Monday Women's Club, 1912): Identified through SurveyLA (2016) as eligible as a contributor to the Downtown Los Angeles Industrial Historic District and as potentially individually eligible; more research needed

6. 1617 E. 7th Street, industrial building (Sperry Flour Co., Angeles Mill, 1903): Identified through SurveyLA (2016) as eligible as a contributor to the Downtown Los Angeles Industrial Historic District and as individually eligible for National Register listing

7. 1745 E. 7th Street, industrial building (Diamond Walnut Company, 1921): Identified through SurveyLA (2016) as eligible as a contributor to the Downtown Los Angeles Industrial Historic District and as individually eligible for National Register listing

8. 1753 E. Olympic Boulevard, industrial building (Western Electric Company, 1925): Identified through SurveyLA (2016) as individually eligible for National Register listing

9. 1807 E. Olympic Boulevard, industrial building (Overland Terminal Produce Warehouse, 1931): Identified through SurveyLA (2016) as individually eligible for California Register listing

10. Air Raid Siren No. 189, non-parcel resource, southwest corner of 8th Street and McGarry Street (1940): Identified through SurveyLA (2016) as individually eligible for National Register listing

11. Downtown Los Angeles Industrial Historic District, industrial district, generally bounded by E. 1st Street on the north, Santa Fe Avenue and Mateo Street on the east, E. 7th Street on the south, and S. Alameda Street on the west (1900-1940): Identified through SurveyLA (2016) as eligible for National Register listing

12. Central Wholesale Produce Market, produce market, generally bounded by 8th Street on the north, Olympic Boulevard on the south, Central Avenue on the east, and Kohler Street on the west (1927): Identified through SurveyLA (2016) as eligible for listing in the California Register as a historic district

6. Impacts Analysis

6.1 Summary of Historical Resource Findings

Pursuant to Section 15064.5(a)(1) of the State CEQA Guidelines (CEQA Guidelines), the term "historical resource" includes a resource listed in, or determined to be eligible by the State Historical Resources Commission, for listing in the California Register of Historical Resources (California Register). The District has been formally determined eligible for listing in the National Register and is thus listed in the California Register.[35] Therefore, the District is considered a historical resource for the purposes of CEQA.

In the 21 years since the District was designated, few material changes have been made within its boundaries. These changes include the construction of a ten-story parking garage structure at the southeast portion of the property and minimal alterations to contributing buildings and the Site in their adaptation from industrial to commercial use as part of ROW DTLA. None of the contributing buildings has endured alterations that have compromised its status as a contributor, and the addition of the parking garage did not compromise the integrity of the District as a whole. Thus, the District continues to be eligible for the National Register and California Register as originally documented.

There are 12 historical resources (or potential historical resources) located in the vicinity of the Site as enumerated above in *Section 5.3*.

6.2 Significance Threshold

According to the California CEQA Guidelines, a project has the potential to create a significant impact on a historical resource when the project may cause a "substantial adverse change" in the resource's significance. Substantial adverse change is defined as "physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired."[36]

The California CEQA Guidelines further provide that "[t]he significance of an historical resource is materially impaired when a project:

a) Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, the California Register of Historical Resources; or

b) Demolishes or materially alters in an adverse manner those physical characteristics that account for its inclusion in a local register of historical resources pursuant to Section 5020.1(k) of the Public Resources Code or its identification in an historical resources survey meeting the requirements of Section 5024.1(g) of the Public Resources Code,

[35] California Public Resources Code, Section 5024.1 (d)(1).
[36] CEQA Guidelines, Section 15064.5(b).

unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or

c) Demolishes or materially alters in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its eligibility for inclusion in the California Register of Historical Resources as determined by a lead agency for the purposes of CEQA."[37]

Additional Guidance under the Secretary of the Interior's Standards

The Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring & Reconstructing Historic Buildings (the Standards) are a set of treatment standards for historic buildings developed by the National Park Service. The Standards for Rehabilitation are used by federal, state, and local agencies to provide guidance as to the suitability of various elements of a proposed project that could affect a historic resource.

For the purposes of CEQA, a project that has been determined to conform with the Standards shall generally be considered to be a project that will not cause a significant impact on a historical resource (CEQA Guidelines, Section 15126.4(b)(1)).

6.3 Project Description

The Project proposes the construction of two mixed-use buildings and one multi-family residential building on the existing non-historic paved North and South Lots, just east of S. Alameda Street between E. 7th Street and Bay Street/E. 8th Street, within the District. The buildings would be located just north and south of Center Street, which runs east-west through the Site. The Project proposes three eight-story new construction buildings that would comprise 1,000 total residential units, 1,000 parking spaces, and 6,131 square feet of retail and café space. Buildings A and B would be constructed on the South Lot, and Building C would be constructed on the North Lot. Building A would include 1,267 square feet of commercial space at the first floor; 417 residential units at the first through eighth floors; and two levels of subterranean parking. Building B would include 216 residential units at the first through eighth floors and two levels of subterranean parking. Building C would consist of 4,946 square feet of commercial space at the first floor; 367 residential units at the first through eighth floors; and one level of subterranean parking. All three buildings would be surrounded by new landscaping, and Building C would be significantly set back from the intersection of E. 7th and S. Alameda streets (approximately 100') so as to maintain important viewsheds of the adjacent contributing buildings to the west.

The Project buildings would have irregular shapes that would partially wrap around central landscaped exterior courtyards at ground level. They would feature flat roofs with outdoor patios and unornamented exterior cement plaster wall cladding. Exterior walls would be clad in smooth stucco with corrugated metal accent cladding, invoking an industrial quality. The buildings would have repetitive, regularly spaced vinyl windows at residential units, and aluminum storefronts at

[37] CEQA Guidelines, Section 15064.5(b)(2)

retail and amenity spaces. The corners of the buildings would be rounded and stepped (their footprints getting smaller as their height increases) to provide views to and from adjacent contributing buildings on the Site.

6.4 Analysis of Project Impacts

Historical Resources on the Project Site

As noted above, a project may have the potential to impact a historical resource if the project would result in a "substantial adverse change" to the significance of a historical resource. Generally speaking, as stated above, substantial adverse change is defined as demolition or material alteration in an adverse manner of those physical characteristics of a historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, the California Register.

As previously described, the District was formally determined eligible for National Register designation through the Section 106 process and is thus listed in the California Register. Therefore, the District meets the definition of a historical resource for the purposes of CEQA.

The Project, which would be constructed on two existing (non-historic, non-contributing) surface parking lots within the District, would not result in the demolition of the District or any of its contributing buildings.

Although the Project would result in some changes to the District with the construction of three new buildings within its boundaries, the District and its seven contributing buildings would continue to retain all of their character-defining features, which are as follows:

- Siting of buildings on the west portion of the property, deeply set back from S. Alameda Street
- Relationship between contributing buildings, including long narrow corridors separating buildings
- Inner court that was historically used as a wholesale produce market (west end)
- Narrow footprints and linear north-south arrangement of contributing buildings
- Historic industrial use and utilitarian architectural vocabulary of contributing buildings, including flat roofs, cast-in-place concrete exterior walls, loading docks (where present), and repetitive, industrial steel sash windows
- Beaux Arts detailing (symmetrical façades, pilasters, stepped parapets, truncated corner towers) at the north and south ends of the six- and seven-story buildings fronting on E. 7th Street
- Arched gateways at the westernmost building that lead to the inner court

In addition, the Project would not obscure important viewsheds of the contributing buildings within the District. Specifically, the north end of the Project's Building C would be significantly set back (approximately 100') from E. 7th Street so that the west-adjacent, Building 4's Beaux Arts detailing at its northeast end would remain visible when viewed from S. Alameda Street. The

portions of Building 4 that the Project would obscure from view from S. Alameda Street are utilitarian and repetitive in appearance; the Project would not block views of any unique characteristics of Building 4 from any direction. The Project's Buildings A and B would only block views of the 2016 parking structure (Building 8), which does not contribute to the District. Because their construction would occur on the non-historic parking lots, the Project's proposed new buildings would not impact any important existing circulation patterns or Site features. For these reasons, upon Project completion, the District would continue to be eligible for listing in the National Register and California Register.

Furthermore, the new construction would comply with the Secretary of the Interior's Standards for Rehabilitation as discussed in detail below. Because the Project would comply with the Standards and preserve all the physical characteristics of the District and its contributing buildings that convey their historical significance and eligibility for listing in the National and California Registers, the Project would not result in a substantial adverse change in the historical significance of the District or its contributors.

Standards Compliance

The Standards for Rehabilitation are an analytical tool for understanding and describing the potential impacts of a project on historical resources. Under CEQA, compliance with the Standards does not necessarily determine whether a project would cause a substantial adverse change in the significance of a historical resource. Rather, projects that comply with the Standards benefit from a regulatory presumption that they would have a less than significant adverse impact on a historical resource.[38]

Though the Project is located within the boundaries of the District, the new development is proposed on two paved surface parking lots that do not contribute to the significance of the District. Thus, the Project would not directly physically impact any contributing elements of the historical resource. For this reason, only Standards 9 and 10 of the Standards for Rehabilitation, which address changes to the site, environment, and related new construction, apply to the Project (Standards 1-8 relate to material treatment of a historic building – or buildings – itself). The following discussion provides an analysis of how the Project complies with Standards 9 and 10.

9. *New additions, exterior alterations, or related new construction will not destroy historic materials, features, and spatial relationships that characterize the property. The new work shall be differentiated from the old and will be compatible with the historic materials, features, size, scale and proportion, and massing to protect the integrity of the property and its environment.*

The Project meets Standard No. 9. The Project would consist of three new eight-story buildings along S. Alameda Street between E. 7th Street and Bay Street/E. 8th Street, at the east side of the District. Because the new buildings are proposed on paved surface parking lots, which do not

[38] *CEQA Guidelines*, Section 15064(b)(2).

contribute to the historic district, the new construction would not destroy any historic materials or features that characterize the District. The new buildings' flat roofs, unadorned cement plaster wall cladding, and repetitive fenestration patterns would be compatible with the scale, proportion, massing, and exterior features and materials of the contributing buildings within the District.

The three new buildings would be eight stories tall and would not exceed 88' from grade to top of parapet. Buildings A and B would be next to the non-contributing ten-story parking structure, which is taller than the proposed buildings and would separate them visually from any of the contributing buildings to the west. The Project's Building C would be directly adjacent to Building 4, a contributing building, although it is roughly 9' shorter (85' tall from the bottom of the first floor to the top of the parapet) than the historic building (which is roughly 94' tall). Thus, it is compatible in size with the closest contributor in the District.

The contributing buildings of the District, particularly Building 4 which is closest to the Project buildings and Alameda Street, do not have a significant relationship with Alameda Street. Rather, they front north onto E. 7th Street or west onto S. Central Avenue. The more architecturally ornate portions of those buildings are focused on the E. 7th Street frontage; the rear portions of the buildings (visible from S. Alameda Street) are utilitarian and repetitive. The existing paved North and South Lots where the new construction is proposed were historically developed with storage/train sheds, rail spurs, and other rail-related structures and infrastructure. Those improvements have all been demolished, and thus any significant spatial relationships between them and the rest of the contributing buildings within the District have been lost. Thus, the Project would not destroy any historic spatial relationships that characterize the District, since the new buildings are being constructed in an area that has already been significantly altered. Even though the Project's Building C would block views from S. Alameda Street of the southern portion of contributing Building 4, this view is not a historically significant view, and the more architecturally distinctive portions of contributing Building 4 that face E. 7th Street would remain visible.

10. *New additions and adjacent or related new construction will be undertaken in such a manner that, if removed in the future, the essential form and integrity of the historic property and its environment would be unimpaired.*

The Project meets Standard No. 10. The proposed development would be constructed on two non-contributing paved surface parking lots within the District. Because the proposed development would be constructed on the non-historic North and South Lots, the Project's proposed new buildings would not impact any important existing circulation patterns or Site features. If the new construction were removed in the future, the integrity of the District and its environment would be unimpaired.

Summary of Continued Eligibility

The District currently retains sufficient integrity to be eligible for listing in the National and California Registers. The District is eligible for listing under Criteria A/1 and C/3 for its association

with early 20th century transportation, wholesale, and storage methods and as an excellent collection of early 20th century industrial buildings designed by master architect John Parkinson.

This Technical Report has analyzed the Project's potential to directly impact historical resources. The Project would involve the construction of three new eight-story buildings on two non-contributing paved surface parking lots within the District. An objective of the Project is to retain all seven contributing buildings within the District in a manner that will not materially impair the significance of the historical resource. Upon completion of the Project, the District would continue to be eligible for listing in the National and California Registers.

Historical Resources in the Vicinity of the Project Site

The Project would not have an indirect impact on any historical resources located in the vicinity of the Site. For these purposes, "vicinity" is conservatively defined as directly adjacent to the Site and/or within view of or from the Site. As described in *Section 5.3*, there are 12 identified historical resources (or potential historical resources) located both within a quarter-mile radius and in the vicinity of the Site (see also Fig. 7):

1. 1013 ½ S. Central Avenue, commercial building (Booker T. Washington Building, 1916): Identified through SurveyLA (2016) as potentially individually eligible; more research needed

2. 1122 E. 7th Street, post office (United States Post Office - Market Station, 1940): Identified through SurveyLA (2016) as individually eligible for National Register listing

3. 1201-1203 E. 8th Street, commercial building (1928): Identified through SurveyLA (2016) as individually eligible for California Register listing

4. 1226 E. 7th Street, commercial/hotel building (1925): Identified as individually eligible through a Determination of Eligibility (2001) report prepared for receipt of federal funding through the U.S. Department of Housing and Urban Development (HUD)

5. 1205 E. 6th Street, mixed-use commercial building (Monday Women's Club, 1912): Identified through SurveyLA (2016) as eligible as a contributor to the Downtown Los Angeles Industrial Historic District and as potentially individually eligible; more research needed

6. 1617 E. 7th Street, industrial building (Sperry Flour Co., Angeles Mill, 1903): Identified through SurveyLA (2016) as eligible as a contributor to the Downtown Los Angeles Industrial Historic District and as individually eligible for National Register listing

7. 1745 E. 7th Street, industrial building (Diamond Walnut Company, 1921): Identified through SurveyLA (2016) as eligible as a contributor to the Downtown Los Angeles Industrial Historic District and as individually eligible for National Register listing

8. 1753 E. Olympic Boulevard, industrial building (Western Electric Company, 1925): Identified through SurveyLA (2016) as individually eligible for National Register listing

9. 1807 E. Olympic Boulevard, industrial building (Overland Terminal Produce Warehouse, 1931): Identified through SurveyLA (2016) as individually eligible for California Register listing

10. Air Raid Siren No. 189, non-parcel resource, southwest corner of 8th Street and McGarry Street (1940): Identified through SurveyLA (2016) as individually eligible for National Register listing

11. Downtown Los Angeles Industrial Historic District, industrial district, generally bounded by E. 1st Street on the north, Santa Fe Avenue and Mateo Street on the east, E. 7th Street on the south, and S. Alameda Street on the west (1900-1940): Identified through SurveyLA (2016) as eligible for National Register listing

12. Central Wholesale Produce Market, produce market, generally bounded by 8th Street on the north, Olympic Boulevard on the south, Central Avenue on the east, and Kohler Street on the west (1927): Identified through SurveyLA (2016) as eligible for listing in the California Register as a historic district

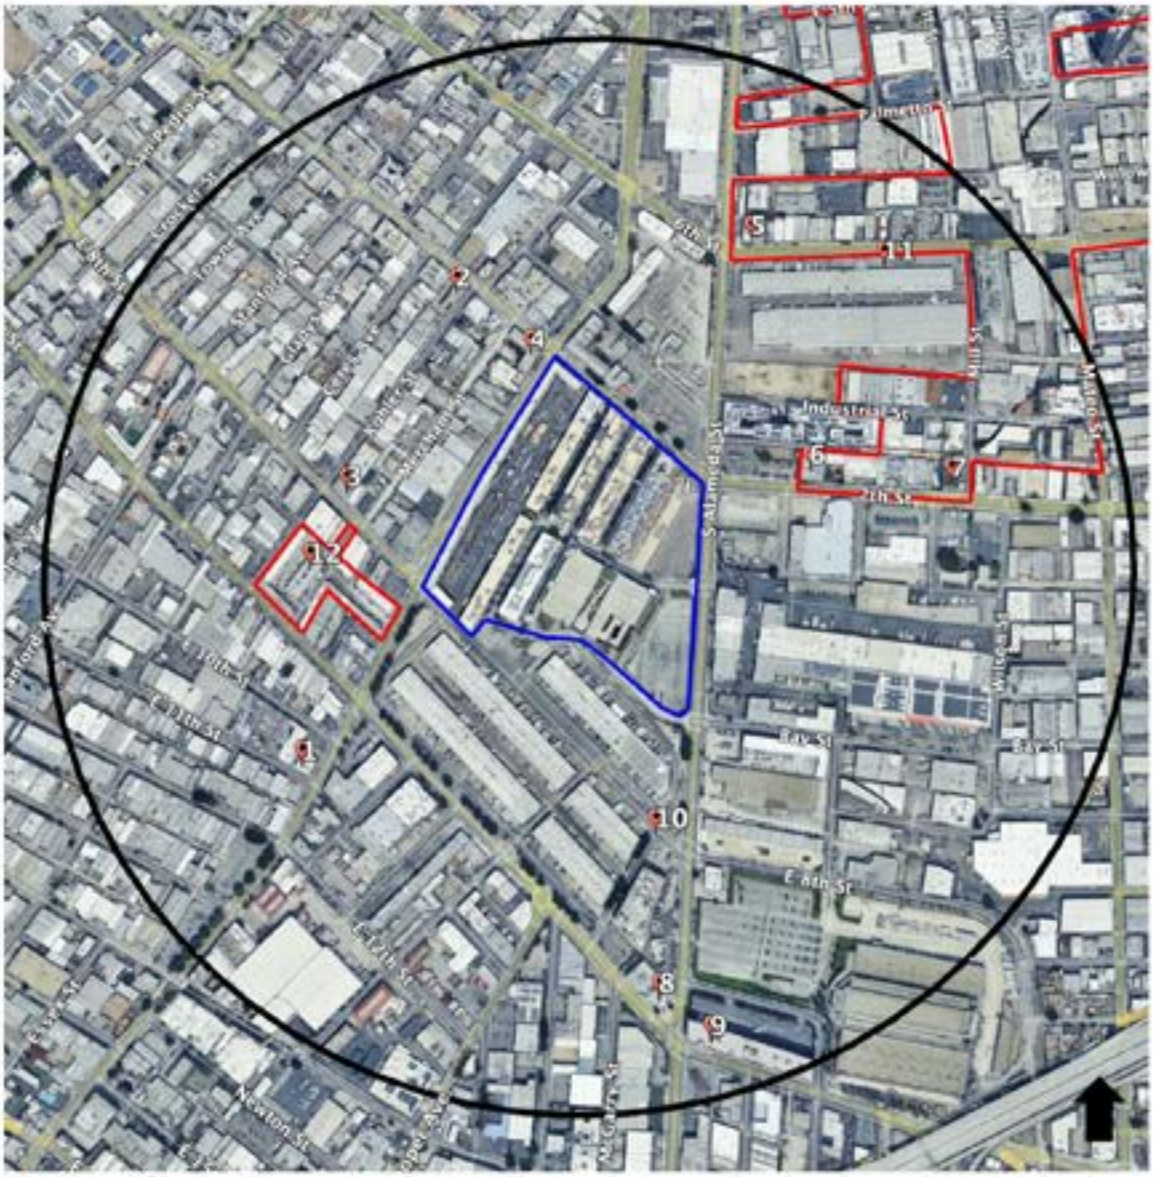

Fig. 7. Map of historical resources and potential historical resources (numbered 1-12; districts outlined in red) in the vicinity of the Project Site (outlined in blue) (Google Maps; adapted by ARG, 2024).

As stated above, ARG did not conduct an independent analysis of eligibility of any of these 12 resources. Rather, for the purposes of this Technical Report, the properties are presumed to be historical resources for a conservative analysis of potential indirect impacts. ARG's analysis of the Project's potential to have an indirect impact on each of these resources is described below.

1. 1013 ½ S. Central Avenue (Booker T. Washington Building, 1916)

The Booker T. Washington Building is a three-story, mixed-use building, located two blocks south of the Project Site, along the west side of S. Central Avenue. The Project's proposed eight-story buildings would only be minimally visible (above other closer buildings) from the Booker T. Washington Building when looking northeast along Central Avenue. Because the Booker T. Washington Building fronts onto S. Central Avenue, important views of the historical resource are

from the street; the Project would not block any views of the building. The resource is already surrounded by scattered industrial and commercial development from the early 1900s, when the resource was built, to the late 20th century, including a 1980s warehouse and fast food restaurant directly across from the building on the east side of S. Central Avenue. Therefore, the setting of the resource has already materially changed prior to the construction of the Project. Furthermore, at two blocks away, the Project is too far from the Booker T. Washington Building to be considered part of its historic setting. For these reasons, the Project would not further alter the current setting of the historical resource.

Thus, following completion of the Project, the Booker T. Washington Building would continue to convey all of its important historic and physical characteristics that make it eligible for designation. It would retain all aspects of integrity it currently does upon completion of the Project. Therefore, the Project would not have any indirect impacts on the building.

2. 1122 E. 7th Street (United States Post Office - Market Station, 1940)

3. 1201-1203 E. 8th Street (1928)

4. 1226 E. 7th Street (1925)

The one-story post office at 1122 E. 7th Street, one-story commercial building at 1201-1203 E. 8th Street, and three-story mixed-use building at 1226 E. 7th Street are located to the west of the Project Site. While the Project Site is visible from these buildings when looking east on E. 7th and E. 8th Streets, views of the Project's proposed eight-story new construction buildings would be blocked by the six and seven-story contributing buildings, Buildings 2-4, adjacent to the Project buildings in the District. Therefore, the Project's buildings would not block any important views from these resources. Further, these resources are located west of the District, away from the area where the Project's new buildings would be located; therefore, the Project's new buildings would not block any views of or change any of the development currently surrounding these resources. Thus, the Project's new development would not alter the current setting of these historical resources.

For these reasons, following Project completion, the post office and commercial buildings would continue to convey all of their important historic and physical characteristics that make them eligible for designation. Therefore, the Project would not have any indirect impacts on these resources.

5. 1205 E. 6th Street (Monday Women's Club, 1912)

The three-story Monday Women's Club building is located one block north of the Project Site, along the north side of E. 6th Street and near its intersection with S. Alameda Street. It fronts south onto E. 6th Street, with a distant, southerly view of the Project Site and Buildings 2-4 of the District. The Project's proposed eight-story buildings would be minimally visible (beyond other closer buildings) from the club building when looking southwest along S. Alameda Street; however, the Project buildings would not block this resource's currently existing distant views of the District and Buildings 2-4. Because the club building faces E. 6th Street, important views of this historical resource are from the street. The Project would not block any of these views of the

building. The resource is already surrounded by scattered industrial and commercial development from the early 1900s, when the club was built, to the mid-20th century, including a late 1960s warehouse directly across from the Monday Women's Club on the south side of E. 6th Street (built decades after the club building); therefore, the setting of this resource has already materially changed prior to the construction of the Project. Furthermore, at a block away, the Project is too far from the club building to be considered part of its historic setting. The club building would remain visually separate and oriented away from the Project Site. For these reasons, the Project would not further alter the current setting of the historical resource. Thus, following completion of the Project, the Monday Women's Club building would continue to convey all of its important historic and physical characteristics that make it eligible for designation. It would retain all aspects of integrity it currently has upon completion of the Project. Therefore, the Project would not have any indirect impacts on the building.

6. 1617 E. 7th Street (Sperry Flour Co., Angeles Mill, 1903)

7. 1745 E. 7th Street (Diamond Walnut Company, 1921)

The two-story Sperry Flour Co./Angeles Mill and seven-story Diamond Walnut Company buildings are located a block east of the Project Site, along the north side of E. 7th Street. The Project's three new eight-story buildings would be visible from both of these buildings when looking southwest along E. 7th Street; however, due to the design of the Project's buildings (as discussed above), these historical resources would still have views of the District's contributing buildings. Because the industrial buildings face E. 7th Street, important views of the historical resources are from the street. The Project would not block any of these views of these buildings. The historic setting of these buildings has already been somewhat compromised since their construction in the early 1900s with surrounding industrial infill development (south side of E. 7th Street) dating to the 1970s and 1980s. Thus, the Project, which would remain visually separate and oriented away from these buildings, would not further alter their settings.

For all of these reasons, following completion of the Project, the Sperry Flour Co./Angeles Mill and Diamond Walnut Company buildings would continue to convey all of their important historic and physical characteristics that make them eligible for designation. They would retain all aspects of integrity they currently have after the Project is completed. Therefore, the Project would not have any indirect impacts on either of the buildings.

8. 1753 E. Olympic Boulevard (Western Electric Company, 1925)

9. 1807 E. Olympic Boulevard (Overland Terminal Produce Warehouse, 1931)

The four-story Western Electric Company and six-story Overland Terminal Produce Warehouse buildings are located approximately one block south of the Project Site, at the intersection of E. Olympic Boulevard and S. Alameda Street. The Project's proposed eight-story buildings would be visible from these historical resources when looking north along S. Alameda Street. Because these buildings face Olympic and Alameda, important views of them are from the streets. The Project would not block any of these views of the buildings. These resources are already surrounded by scattered industrial and commercial development from the early 1900s, when they were built, to the mid-20th century, including 1990s and early 2000s industrial buildings to the north along S. Alameda Street; therefore, the settings of these resources have already materially changed prior

to the construction of the Project. Furthermore, at one block away, the Project is too far from the either of these buildings to be considered part of their historic settings. The buildings would remain visually separate and oriented away from the Project Site. For these reasons, the Project would not further alter the current settings of these historical resources.

For all of these reasons, following completion of the Project, the Western Electric Company and Overland Terminal Produce Warehouse buildings would continue to convey all of their important historic and physical characteristics that make them eligible for designation. They would retain all aspects of integrity they currently do upon completion of the Project. Therefore, the Project would not have any indirect impacts on the buildings.

10. Air Raid Siren No. 189 (southwest corner of 8th Street and McGarry Street, 1940)

Air Raid Siren No. 189 is located south of the Project Site, at the southwest corner of 8th Street and McGarry Street. The Project's three new eight-story buildings would be visible above other closer industrial buildings directly north of the air raid siren. Given the reasons for the resource's significance, the air raid siren does not possess any inherently important views or viewsheds. The air raid siren would remain visually separate from the Project Site.

After the Project is completed, the air raid siren would continue to convey all of its important historic and physical characteristics that make it eligible for designation. It would retain all aspects of integrity it currently has and therefore the Project would not have any indirect impacts on the resource.

11. Downtown Los Angeles Industrial Historic District (generally bounded by E. 1st Street on the north, Santa Fe Avenue and Mateo Street on the east, E. 7th Street on the south, and S. Alameda Street on the west, 1900-1940)

The Downtown Los Angeles Industrial Historic District encompasses dozens of industrial buildings dating from the late 19th century to the early 1940s. The district is sited on the east side of S. Alameda Street between E. 1st and E. 7th Streets, just north and east of the Project Site.

The Project's proposed three new buildings would be visible from the southern edge of the industrial district when looking south along S. Alameda Street. Important views of the district and its contributing buildings are from streets within the district, which would not be blocked by the Project. The historic district's setting beyond its boundaries has changed since its original development with the demolition of buildings on surrounding thoroughfares as well as new industrial and commercial infill dating to the late 20th century. The historic district would remain visually separated and oriented away from the Project Site. For these reasons, the Project would not further alter the current setting of the historic district and its contributing buildings.

Following completion of the Project, the Downtown Los Angeles Industrial Historic District and its contributing buildings and features would continue to convey all of their important historic and physical characteristics that make them eligible for designation. The district and its contributors would retain all aspects of integrity they currently do upon completion of the Project. Therefore, the Project would not have any indirect impacts on this historic district.

12. Central Wholesale Produce Market (generally bounded by 8th Street on the north, Olympic Boulevard on the south, Central Avenue on the east, and Kohler Street on the west, 1927)

The Central Wholesale Produce Market includes seven one-story industrial buildings at the interior of a block bounded by E. 8th Street, E. Olympic Boulevard, S. Central Avenue, and Kohler Street. The Market is located just south and west of the Project Site. The Project's proposed three new buildings would be visible from the Market when looking north along S. Central Avenue or east along E. 8th Street; however, due to the design of the Project's buildings (discussed above), existing views of the District from the Market would be maintained. All Market buildings can be viewed internally from smaller vehicular courts and externally from surrounding streets. Thus, important views of the Market buildings are from within the Market and from surrounding streets, which would not be blocked by the Project. The Market's setting has changed since its original development in the 1920s with the demolition and substantial alteration of buildings on surrounding thoroughfares as well as new industrial and commercial infill dating to the late 20th century. The Market would remain visually separated and oriented away from the Project Site. For these reasons, the Project would not further alter the current setting of the historic district and its contributing buildings.

Following completion of the Project, the Central Wholesale Produce Market and its contributing buildings and features would continue to convey all of their important historic and physical characteristics that make them eligible for designation. The Market and its contributors would retain all aspects of integrity they currently have upon completion of the Project. Therefore, the Project would not have any indirect impacts on the Market.

7. Conclusion

In conclusion, the Project would not have a significant impact on historical resources under CEQA.

The Project Site is located within the Los Angeles Union Terminal District, a historical resource as defined by CEQA. The Project would not materially impair the significance of the District or any of its seven contributing buildings. All character-defining features of the District and its contributors would be retained under the Project, as would important viewsheds of District contributors. The Project's three eight-story new construction buildings would be built on existing non-historic surface parking lots. They would be compatible with the size, scale, proportions, massing and exterior materials and features of the District and its contributing buildings. The District would continue to be eligible for listing in the National Register and California Register upon Project completion.

There are 12 identified historical resources (or potential historical resources) in the vicinity of the Project Site. The significance of these resources would not be materially impaired by the Project, and thus the Project would not have indirect impacts on any historical resources in its vicinity.

***P3a. Description:**

This six-story warehouse and office building was constructed in 1924 in a utilitarian industrial style with Beaux Arts elements. The building has a nearly rectangular plan and a symmetrical façade. It has a flat roof likely clad with composite material. An open tower with x-shaped bracing is visible at the south section of the building; there is also a water tank located on the roof. Nextel drawings for their candidate project show there to be three other structures on the roof; two are identified as "penthouse" and the third as "tank." These could not be observed during the evaluation. In addition, three sets of Verizon Wireless cellular antennas exist at the north, west and east ends of the roof. The foundation is made of concrete and the exterior walls are of reinforced concrete. Located just below the roof line at the façade, and the south and west elevations are triangular pediments supported by decorative brackets with scroll designs, located at each corner. There is also a fire escape located at the center of the façade, and two fire escapes located at the west elevation.

(continued from page 1)

The primary entrance faces north towards East 6th Street and is located at the center of the façade. There is a partially faded painted sign above it, indicating the current occupants, "Iron Mountain." This entrance has been remodeled; white marble panels clad the walls, stairs and landing; there is a metal handrail mounted at the center of the stairs.. The double doors are metal and glass, which are surrounded by a wall of lights. There are recessed round light fixtures above the landing. There are twelve warehouse garage entrance doors at the west elevation, each with metal roll up doors. There is also a pedestrian entrance at this elevation, located north of the garage entrances. There are also fourteen warehouse garage entrances with metal roll up doors at the east elevation. The original windows have metal frames and muntins; consisting of multiple lights, the center section pivots. There are also narrow horizontal single light windows openings, for the basement level, located at the façade; they are protected with metal security bars. A few of the windows at the façade have been filled in. There are no windows at the south elevation.

There is a 1945 one-story addition located at the south (rear) elevation. Like the original building, it has reinforced concrete exterior walls, and a flat roof. This addition has an irregular plan with three warehouse garage doors; they are located at the east, west and south elevations. The door at the south elevation is accessed by a concrete ramp. The building has large windows with multiple lights that appear to be fixed, at each of its elevations.

BUILDING, STRUCTURE, AND OBJECT RECORD

*CHR Status Code

*Resource Name or #: 1340 East 6th Street; Los Angeles, CA 90021

B1. Historic Name: Metropolitan Warehouse Co.
B2. Common Name: Iron Mountain
B3. Original Use: warehouse and offices
B4. Present Use: warehouse and offices
*B5. Architectural Style: utilitarian industrial with Beaux Arts elements

*B6. Construction History: The building was constructed in 1924 for warehouses and offices. The building construction was described this way in a November 23, 1924, *Los Angeles Times* article: "[The building] will contain approximately seven acres of floor space...It will be supported by 102 footings, each eighteen feet square and containing approximately 1300 cubic feet of concrete. To make the complete building, it will be necessary to use approximately 112,000 sacks of cement, 36,000,000 pounds of crushed rock, 24,000,000 pounds of sand, 3,000,000 pounds of reinforcing steel, 700,000 board feet of lumber for forms, six miles of pipe for sprinkler system, and three miles of electric conduit." During construction, a load capacity test was requested by the Los Angeles Department of Building and Safety. 256 tons of cement were loaded onto a 20 by 20 feet of floor space in the new building for eighteen hours, with only minimal deflection. This test was the severest that any floor in Los Angeles had been subjected to, up until that time.

(continued on page 4)

*B7. Moved? ☒No ☐Yes ☐Unknown Date: Original Location:

*B8. Related Features: The building was constructed up to the property line at the north, west and east elevations. At the south elevation, there is an asphalt paved area located west of the 1945 addition. In addition, there is also a non-original metal chain link fence with barbed wire located here.

(from page 3)

***B6. Construction History:**

The most significant change occurred in 1945; a 5,300 square feet addition was constructed at the south elevation. The alteration permit listed Harry T. Miller as the architect, and William P. Neil Company, Ltd. as the contractor. Like the original building, the exterior walls are of concrete, and the roof is flat and clad with composite material. In 1927, a permit was filed for the installation of a water storage tank on the roof; it is likely that this not only supplied general water needs for the building, but also provided for the building's extensive sprinkler system. This tank still exists on the building. In 1934, a building permit was filed to close up an existing door opening on the east elevation; evidence of this closure could not be observed. In 1940, a permit was filed for installing a new cold storage room in the basement. A 1951 permit was for the alteration of the primary entrance; it indicated the removal of wood paneling, cast stone, and the cutting down of door stiles and rails, as well as the glazing. The current Modern style entrance is likely the result of this alteration. Otherwise, there were a good number of building permits filed throughout the decades for alterations of interior partitions and paneling, and other office configuration changes. Additional alterations observed during the site visit were the installations of metal rolling doors at the warehouse garage entrances. It is likely they were installed some time within the last two decades. A few of the windows at the façade have been filled in at unknown times.

***B10. Significance:**

The evaluated building was constructed in 1924 in a utilitarian industrial style with Beaux Arts elements for the Metropolitan Warehouse Co. The property was owned by the Atchison Topeka and the Santa Fe Railway Co. at that time, according to Los Angeles Assessor records. A *Los Angeles Times* article from that time, however, indicates the Western Improvement Company as the owner. The property had already been previously developed before the current building was constructed. A 1906 Sanborn map shows there to have been a one-story building occupied by the National Wood Pipe Co and Pacific Tank Co. A 1916 building permit was for the construction of market stalls at this location. Of course, both these and any other buildings or structures were demolished for the construction of the current building. By 1935, the Santa Fe Land Improvement Company owned the property. It was in their hands until 1950, when the property was in transition with the Howlin Realty Co., Inc. In 1950, Harry F. and Edith Leveson acquired the property for approximately $500,000; Harry was associated with the Wescar Investment Co. The building was in their hands until 1965. At that time, Dalton G. Feldstein acquired it. From 1988 until 1997, it was under the Dalton G. Feldstein Trust. Today the property is owned by the Joyce E. Feldstein Trust (Feldstein Family Trust).

The building was leased and occupied by the Metropolitan Warehouse Co. It was located within an industrial section of Los Angeles, just south of downtown and east of Alameda Street. When this building was constructed in 1924, the area was at its height in industry; in addition to warehouses such as this, light industries such as pottery, brewery, flour mill and meat packing were common. To the east of the evaluated building, beyond the Los Angeles River was a six block area called the Metropolitan Warehouse and Industrial District, which was established in 1925. This was a development tract catering to manufacturing and warehouses, promoted by them as "the last remaining large piece of downtown industrial acreage in Los Angeles." Although the evaluated building was not part of this district, it too was surrounded by other 1920s and 1930s warehouse and light industrial buildings such as those for Hills Bros. Coffee located to its east. By 1959, the Metropolitan Warehouse Co. also occupied the property next door at 1360 East 6th Street (known as 1366 East 6th Street at that time). According to the Sanborn map from that year, this building was being used by Metropolitan Warehouse to store plastic materials. By 1967, it was being used for general storage. Meanwhile, the 1950 Sanborn map shows that the northern and southern sections of the original building being evaluated was being used for liquor storage. The middle section was being used for general storage. The 1953 and subsequent Sanborn maps only indicates general storage as the use for the entire building. No specific use was identified for the 1945 addition. By the early 1960s, manufacturing was in decline in this area.

(continued from page 4)

The Metropolitan Warehouse Co. was established with Henry. B. Safford as president, A. Meyers as vice president and Rowe Sanderson as secretary-treasurer. According to their advertisement in the 1926 Los Angeles city directory, the Metropolitan Warehouse Co. operated the building in conjunction with the California Truck Co., which was incorporated in 1884. Safford was also secretary of California Truck at that time. Metropolitan Warehouse and California Truck advertised the 270,000 square feet building for storage, pool car distribution and draying (transporting of heavy goods using a low, strong cart with detachable sides); it also boasted sprinkler systems throughout. California Truck was one of the oldest companies associated with draying and distributing in Los Angeles. Metropolitan Warehouse also provided motor truck and team service for delivery to and from train depots and the Los Angeles Harbor. Safford and Sanderson continue to be listed in the city directories until the late 1930s; Meyer is no longer listed in these years. By 1941, the Los Angeles city directory simply indicates Charles O. Simpson as being the manager of Metropolitan Warehouse. Simpson died in 1951; his obituary lists him as the vice-president of the Metropolitan Warehouse Co.

The building is still identified as the Metropolitan Warehouse Co. in the 1970 Sanborn map. However, by the 1973 Haines directory, various occupants are listed in the building. These include, Allied Distribution, Hollywood Brands Ludens, Inc. and Metro Distribution; Metropolitan Warehouse is listed as one of the occupants. Today, the building is occupied by Iron Mountain, an international records storage and management services company based in Boston. Iron Mountain was founded in 1951 in New York state by Herman Knaust. They use the building for their storage business, and also have offices on the first floor level.

Integrity Statement

The building was constructed in 1924 as a warehouse with offices, and was called the Metropolitan Warehouse Co. In regard to the seven aspects of integrity of location, design, setting, materials, workmanship, feel and association, the building has retained its original location. It has not been moved. The setting of the property has remained essentially the same. The building is still located in an area with warehouses, and remnants of light industry buildings exist. Although the feeling remains essentially the same, there are buildings located to the north and east that have been demolished and replaced since the evaluated building was originally constructed. The building's association, feeling, design, materials and workmanship have remained essentially the same since its original construction The building retains its original rectangular shape and plan. It has its original industrial style multi-light windows with metal frames and muntins, although a few have been filled in at the façade. The building retains its minimally adorned original reinforced concrete construction, consistent with its use as a warehouse building. The building still has the pediments located at the roofline, reflective of the Beaux Arts style. The building has, however, been altered since its original construction. These changes include an early reinforced concrete addition made in 1945 at the rear of the property. In addition, the primary entrance has been altered. The integrity of the building is good. The condition of the building is also good.

(continued from page 5)

National Register of Historic Places Eligibility Evaluation

The property was assessed under National Register Criterion A for its potential significance as part of a historic trend that may have made a significant contribution to the broad patterns of our history. This building was constructed in 1924 as offices and warehouse for the Metropolitan Warehouse Co. It appears simply to have been a warehouse constructed within an industrial and warehouse setting located south of downtown Los Angeles. This building was located just outside of the Metropolitan Warehouse and Industrial District development tract established in 1925. In other words, there is no significant historic event or trend associated with this property. Therefore, the property does not appear to qualify for the National Register of Historic Places (NRHP) under Criterion A.

The property was considered under Criterion B for its association with the lives of persons significant in our past. When the Metropolitan Warehouse Co. was established, Henry B. Safford was its president, A. Meyers was vice president and Rowe Sanderson was secretary-treasurer. Charles O. Simpson was later vice president. Safford was also identified as a secretary for California Truck Co., and Simpson was also vice president of the Westland Warehouse. However, no evidence could be found to show that these people were significant to our past. Therefore, the property does not appear to qualify for the National Register of Historic Places (NRHP) under Criterion B.

The property was evaluated for Criterion C for embodying the distinctive characteristics of a type, period, or method of construction, or representing the work of a master, or possessing high artistic values, or representing a significant and distinguishable entity whose components may lack individual distinction. The building was designed in a utilitarian industrial style with Beaux Arts elements. Its integrity is good. The building retains its original rectangular shape and plan. It has its original industrial style multi-light windows with metal frames and muntins, although a few have been filled in at the façade. The building retains its minimally adorned original reinforced concrete construction, consistent with its use as a warehouse building. The building still has the pediments located at the roofline, reflective of the Beaux Arts style. The building has, however, been altered since its original construction. These changes include an early reinforced concrete addition made in 1945 at the rear of the property. In addition, the primary entrance has been altered. The building does not embody the distinctive characteristics of a type, period, or method of construction at the level of the NRHP. The evaluated building is located just outside of the Metropolitan Warehouse and Industrial District established in 1925. The building is still located in an area with warehouses, and remnants of light industry buildings exist. Although the feel remains essentially the same, there are buildings located to the north and east that have been demolished and replaced since the evaluated building was originally constructed. Thus, this building also does not represent a significant and distinguishable entity whose components may lack individual distinction. The builder was C. A. Fellows Co. There is no evidence to show that this company produced the works of masters. Therefore, the property does not appear to qualify for the National Register of Historic Places (NRHP) under Criterion C.

The property was considered for Criterion D for the potential to yield, or may be likely to yield, information important to prehistory or history. In order for buildings, structures, and objects to be eligible under this criterion, they would need to "be, or must have been, the principal source of important information." This is not the case with this property. Therefore, the property does not appear to qualify for the National Register of Historic Places (NRHP) under Criterion D.

In summary, the property does not appear to qualify for the NRHP under these criteria. Therefore, the building is not a historic resource for the purposes of NHPA. The property was not assessed for California Register or local designation eligibility.

*P3a. Description: (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

This property is comprised of two adjacent parcels, both of which contain separate buildings. The northern parcel, 5164-011-001, contains a six-story, five-bay wide industrial/warehouse building (1924, Building A). The southern parcel, 5164-011-002, contains a one-story industrial building (constructed in 1945, Building B). Building A is Beaux-Arts influenced in style, is configured in a slim rectangle, likely has a flat roof, has reinforced, board-formed concrete walls, and is surrounded by a simple parapet. The main elevation is configured in a two-part commercial block, is symmetrical and has a recessed central entrance. Remaining windows are multi-light. Stepped-out pedements supported on brackets puncturate the corners. Building B is utilitarian style, is configured in an irregular tringle, may have a bowstring truss roof and reinforced, board-formed concrete walls, and is surrounded by a plain parapet. The complex of two buildings is on a flat corner lot, occupies both parcels entirely and contains no landscape features.

BUILDING, STRUCTURE, AND OBJECT RECORD

*NRHP Status Code 6Z

*Resource Name or # (Assigned by recorder) 1340 E 6th Street (No. 133 and No. 134)

B1. Historic Name: Metropolitan Warehouse Co. and Annex
B2. Common Name: Iron Mountain
B3. Original Use: Industrial warehouse
B4. Present Use: Industrial warehouse
*B5. Architectural Style: Vernacular (utilitarian)
*B6. Construction History: (Construction date, alterations, and date of alterations)
Building A built in 1926. In 1964, parapet was corrected (City of L.A, Building Permit # 1964LA84472, 1964). Other alterations to Building A include overpainting of concrete, boarded and infilled windows, application of window opaque screens, reconfiguration of entrances, and addition of roll-up garage doors (dates unknown).
Building B completed in 1945, aand additions include overpainting concrete and windows, and addition of roll-up doors (dates unknown).
*B7. Moved? ☒ No ☐Yes ☐Unknown Date: Original Location:
*B8. Related Features: None

B9a. Architect:
b. Builder: C.A. Fellows Co.
*B10. Significance: Theme: N/A
Area: N/A
Period of Significance: N/A
Property Type: N/A
Applicable Criteria: N/A
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)
Building A was constructed in 1924 for use as warehouses and offices (*Los Angeles Times*), Constructed for Metropolitan Warehouse Company, at the time of its completion, the nearly 7-acre, reinforced concrete building was considered a minor engineering feat because of its great physical strength. Contractor C.A. Fellows Co. may also have been responsible for erecting a Santa Fé Station in Wilmington two yars later (*Southwest Builder & Contractor*).

Although modestly recognizable to its original appearance, the assemblage of two buildings lacks integrity of original design, materials and workmanship. As a large, multi-story warehouse and annex, the property is an ordinary example of a common type, the altered industrial building complex. Previously evaluated for historic significance, this building and addition were found not eligible for listing in the National Registers (Galvin & Assovciates, 2004). No new evidence was found that would dispute the previous determination of eligibility and the complex does not constitute a historic district. Because of alterations and the lack of significance under criteria 1-4, the property is not eligible for listing in the California Register.

B11. Additional Resource Attributes: (List attributes and codes) N/A

*B12. References:

*P3a. Description: (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

This single-story, utilitarian garage building is rectangular in plan with a clipped corner, likely has a flat or bow-string truss roof, and is finished in painted, board-formed concrete. The asymmetrical composition is circumscribed by a subtly stepped out sign band and continuous parapet above multi-light windows. The most prominent exterior elevation of the building from the street is the 45-degree, clipped northeast corner, which features a large, 6- by 4- light window. The main vehicle entrance is reached by Mesquit Street and leads to a central paved parking lot along the south elevation. A vehicle entrance with a roll-up door is located on the interior north elevation. A small outbuilding is located on the southeastern corner of the parcel. The most prominent design element is the"Michelin" box-type pole sign. The property is located on a flat corner lot, and contains no landscape features.

BUILDING, STRUCTURE, AND OBJECT RECORD

*NRHP Status Code 6Z

*Resource Name or # (Assigned by recorder) 600-602 S. Santa Fe Avenue (No. 110)

B1. Historic Name: Clark Co./Transcold

B2. Common Name: Michelin (Lumary's Tire Service, Inc.)

B3. Original Use: hydraulic transportation/auto repair shop

B4. Present Use: tire warehouse

*B5. Architectural Style: Utilitarian

*B6. Construction History: (Construction date, alterations, and date of alterations)

Built in 1946 according to County Tax Assessor's data. A permit to erect a new building dated July 21, 1948 indicates that an office and a shed were already located on the parcel (City of Los Angeles Building Permit # 1948LA19289, hereinafter BP#1948LA19289). The cost of the sheet metal-clad building was $2,800. Aerial photographs indicate that an L-shaped addition/roof covering was constructed to the south and west elevations. Roof covering added ca. 1970s (Lumary). Other alterations include roll-up doors and replaced glazing (dates unknown). Original underground hydraulic tanks were removed prior to 1970 (Lumary).

*B7. Moved? ☒ No ☐Yes ☐Unknown Date: N/A Original Location: N/A

*B8. Related Features: Wash Rack/Shed building located on the southeastern corner of the parcel (built date unknown).

B9a. Architect: none b. Builder: unknown

*B10. Significance: Theme: N/A Area: N/A

Period of Significance: N/A Property Type: N/A Applicable Criteria: N/A

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

The subject building replaced a single family dwelling and industrial building, Pioneer Green Chile Packing Co. (Sanborn Fire Insurance Compnay Map, 1906-1951) and was constructed sometime after 1931. Sanborn Fire Insurance Company map page (dated 1931) of the area indicates that the main building was constructed as a private garage and auto repair shop, and the outbuilding was constructed as a wash rack (Sanborn Fire Insurance Map, 1906-1955). Previous tenants include Clark Co., a hydraulic company, and later Transcold, a refrigeration company.

The current tenant and owner, Lumary's Tire Service was established in 1962 and specializes in tire retread service and nationwide road assistance. Lumary's has occupied the building since 1970 and Paul Lumary added the existing, internally illuminated 6 by 14 foot, "Michelin" box sign in 1970 (BP#1970LA11988). In 1988, the pole sign's height was reduced. No other consequential information was located about Lumary's Tire Service. In 1974, Lumary's obtained a permit s to perform various interior modiciations.

Recognizable to its original appearance, the building is an ordinary example of a common type, the altered garage building. Because the building is merely an simple example of a post-war garage, it is not eligible for listing in the National or California registers under Criterion C or 3 for its architecture and does not warrant further evaluation under Criteria A/1 or B/2. No evidence was discovered to warrant consideration under Criterion D/4.

B11. Additional Resource Attributes: (List attributes and codes) N/A

Period of Significance: N/A Property Type: N/A Applicable Criteria: N/A
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

The subject property was completed in 1952 for Gasket Manufacturing Co. as a warehouse for gaskets and parts ata cost of $10,000. F.E. Mac Donald, Jr. was the licensed engineer (City of L.A., Building Permit # 1952LA28570, 1952, hereinafter BP# 1952LA28570) responsible for the metal building's simple design. Gasket Manufacturing Co. was established in 1937 and is based in Gardena, California. The builder, E.C. Livingston Co., Inc., a gereral contracting company, was based in Paso Robles and may no longer be in existence. No other consequential information was located for either Gasket Manufacturing Co. or E. C. Livingston Co.

Metal and more specifically, rigid-famed steel buildings gained popularity after the end of World War II. Until that time, such structures were used for agricultural applications, including tanks and bins. Because the accelerated need for military buildings, and increased access to steel, metal buildings were more widely used for human habitation during and just after the war.

Although it is recognizable to its original appearance, the building is in deteriorated condition and lacks integrity of the original simple design and materials, as well as workmanship. The building is a an average example of a ordinary type, the altered meatl industrial building. Because of described alterations, this property is not eligible for listing in the National or California registers under Criterion C or 3 for its architecture and does not warrant further evaluation under Criteria A/1 or B/2. No evidence was discovered to warrant consideration under Criterion D/4.

*B5. Architectural Style: Vernacular (utilitarian)
*B6. Construction History: (Construction date, alterations, and date of alterations)
Building is an addition to Mrs. Lee's Pies building located immediately south of this parcel at 609 S. Santa Fe Avenue (City of L.A., Building Permit # 1953LA64006, 1953, hereinafter BP# 1953LA64006). Parapet removed or corrected in 1962 (BP# 1962LA11774). Demolition permit for 20' by 80' portion of the building was issued in 1986 (BP# 1986LA43726), although demolition of that portion of the building is unknown. Alterations: installation of a large roll-up door and metal security bars over windows and doors (dates unknown).

*B7. Moved? ☒ No ☐Yes ☐Unknown Date: N/A Original Location: N/A
*B8. Related Features: None
B9a. Architect: None b. Builder: Morgan Lumber & Co.
*B10. Significance: Theme: N/A Area: N/A
Period of Significance: N/A Property Type: N/A Applicable Criteria: N/A
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)
This building was constructed in 1953 on a vacant lot as an addition to the Mrs. Lee's Pies building (a bakery built in 1924), located immediately south of this parcel, at 609 S. Santa Fe Avenue (BP# 1953LA64006). In 1962, likely in order to comply with the City's Parapet Correction Ordinance, the parapet was reduced, removed or otherwise corrected (BP# 1962LA11774). Although a demolition permit was obtained for a 1,600 square foot demolition in 1986, there is no evidence of its having occurred. Visible alterations include the addition of a large roll-up door and installation of metal security bars over windows and doors (dates unknown).

The original tenant and owner, Mrs. Lee's Pies, was probably in business as early as the 1920s. They manufactured frozen pies and were acquired by The Carnation Company in 1955. Because the convenience dessert business became both highly profitable and competitive, the company was part of a Supreme Court case in the late 1960s regarding protection by federal antitrust laws from effective price competition. No other consequential information regarding Mrs. Lee's Pies was located. No information on a local Morgan Lumber & Co. business was found.

Although modestly recognizable to its original appearance, because of alterations the building lacks integrity of its original design and materials, as well as workmanship. The building is a very ordinary example of a common type, the altered industrial building. Because of described alterations, this property is not eligible for listing in the National or California registers under Criterion C or 3 for its architecture and does not warrant further evaluation under Criteria A/1 or B/2. No evidence was discovered to warrant consideration under Criterion D/4.

*P3a. Description: (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

Built in 1946, this single-story industrial building is a apir of irregular rectangles in plan. The Streamline Moderne-influenced building has a flat roof, is finished in painted brick and surrounded by a continuous parapet. The building is comprised of two parts, the front office building and the rear warehouse. The main elevation is asymmetrical, notably has a radiused, curved corner and a combination of glass block, transom, and fixed-light windows. The main entrance is a simple slab-type pedestrian door enclosed by a metal security door. A stepped-out brick course above the windows forms a fillet and emphasizes the curved form of the building. The warehouse portion of the building is located behind the front office and is approximately two-stories (or one high cube story) in height. The property is located a flat lot, mid-block, and contains no landscape features. There is a small, paved driveway or parking lot, circumscribed by a high iron fence on the north side.

*B10. Significance: Theme: N/A Area: N/A
Period of Significance: N/A Property Type: N/A Applicable Criteria: N/A
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

This building was constructed in 1946 at a cost of $20,000 for Myron Mendelson. A Myron H. Mendelson was was born in 1916 in Illinois and died in 1986 in Los Angeles, CA (California Social Security Death Index, US Federal Census, 1930). The builder, J. H. Hillock & Sons may have been John Howard Hillock, a Canadian who was born in 1924 and died San Bernardino in 1992 (California Social Security Death Index) No consequential information regarding the lives on Messrs. Mendelson or Hillock was found. Sanborn Fire Insurance Company maps indicate that the building was originally used to manufacture canned dog food (Sanborn Fire Insurance Maps, 1906-1951). As of 1956, the building was occupied by Fresh Maid Pies (*Street Address Directory*). The property is currently owned by Sieroty Properties, LLC, an entity which acquired it from Alan G. Sieroty and Beth May Metzler, who received it from his father, Julian M. Sieroty (1903-1989, CA SS DI). The Sieroty family has been active in Los Angeles real estate for most of the 20th century, but are best known for ownership of the Claud Beelman-designed Eastern-Columbia Building. Alan Sieroty (b. 1930) served in the California Assembly from 1966-1977 and was a state Senator from 1977-82 (Caldifornia Archives). As one of three commercial properties currently owned by Sieroty Properties in Los Angeles, it appears to be an investment with no direct connection to the lives of the owners.

Although modestly recognizable to its original appearance, because of alterations, the building lacks integrity of its original simple design and materials, as well as workmanship. The building is a plain example of a Streamlone Moderne-influenced, altered industrial building. Because of described alterations, this property is not eligible for listing in the National or California registers under Criterion C or 3 for its architecture and does not warrant further evaluation under Criteria A/1 or B/2. No evidence was discovered to warrant consideration under Criterion D/4.

*P3a. Description: (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

Built in 1948, this single-story, four-bay wide industrial building is vernacular (utilitarian) in style, rectangular in plan, has a front-gabled roof and is finished in corrugated metal sheeting. The rear, or main elevation is a loading dock with four elevated bays and roll-up doors. The main pedestrian entrance is a simple slab-type pedestrian door. Remaining windows are metal framed, and a pair of grills at the apex of the roofline. All elevations have "Southwestern Bag Co." painted in block letters. The property is located a flat lot, near a corner and contains no landscape features. A paved parking lot is located on the north side of the parcel. This building was historically associated with 611, 615 Mateo Street and 635 Mateo Street. (See attached BSO).

*B7. Moved? ☒ No ☐Yes ☐Unknown Date: Original Location:

*B8. Related Features: This parcel was previously associated with 611/615 Mateo Street and 635 Mateo Street, which were also associated with the Hills Brothers Coffee Co. (Sanborn Fire Insurance Maps, 1906-1951). All are now owned by Baran Co., Inc.

B9a. Architect: Rowland H. Crawford b. Builder: P.J. Walker Co.

*B10. Significance: Theme: N/A Area: N/A

Period of Significance: N/A Property Type: N/A Applicable Criteria: N/A

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

The building was constructed in 1948 as a warehouse to store coffee for Hills Brothers Coffee Company, at a cost of $7,000. Founded 1882 in San Francisco, Hills Brothers was best known for their use of vacuum-sealed tins and jars, which made fresh coffee readily available for retail use. The current owner, Southwestern Bag Co. has been in business in other locations since 1924. Southwestern Bag Co. is listed on a 1990 building permit record as building owner, after the property had changed hands several times (BP# 1990LA52164 and BP# 1990LA59157).

The architect, Rowland H. Crawford (1902-1973), started his Beverly Hills-based archictectural firm in 1938. Until that time he was an associate of prominent local architect, Gordon B. Kauffman. Crawford was responsible for several buildings, including: Sears (Santa Monica, 1947), *Los Angeles Times* Building #2 (with Kauffman in Los Angeles), Brentwood Country Market (both 1948) Harris School of Architecture building at USC and additions to the Fine Arts Building (1949) and the El Rancho Shopping Center in Arcadia (1955). It is not known whether Crawford designed other metal buildings, but the material was increasingly popular for inexpensive industrial uses after the end of the second World War. Contractor P.J. Walker Co. built the University of Southern California Doheny Memorial Library, One Bunker Hill and Hill Street Pacific Electric (interurban) Station.

Although the building is a well-proportioned example of a metal building, it is nonetheless a simple example of a very common type. Although the building is the work of a notable local architect, it is not among his more distinguished works. Because metal the building is a common type and is an unremarkable example of Crawford's work, it is is not eligible for listing in the National or California registers under Criterion C or 3 for its architecture or as the work of a master and does not warrant further evaluation under Criteria A/1 or B/2. No evidence was discovered to warrant consideration under Criterion D/4.

The resource is a 1-3-story, rectangular shaped, symmetrical, Neoclassical style commercial building located on a main commercial artery. The building has a concrete foundation, stucco and brick exterior, and a flat roof. The building has few decorative details and has vertical detailing which divides the two main facades into vertical divisions. The east and west façades contain several bays with foldup doors for deliveries. The north and west sides also contain various entrances which provide access to other tenants within the building. These doors are single doors recessed into the building. Metal fire escapes are present on three façades of the structure. The south wall is brick with no openings. Windows are large banks of evenly spaced windows which include metal framed, non-historic fixed pane and casement style windows. A large fenced parking lot is present at the rear of the building. The building is in fair condition.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)
Building permits for the structure were reviewed at the City of Los Angeles Building Department. No original construction permits were located for the property. Permits available for the property begin in 1958 and include alterations for 1958, 1979, 1980, 1982, 1988, 1997, 2000, and 2010. Changes made to the building include numerous interior alterations, non-historic door and window replacements. The permits and city directory information indicate that the property was used for a variety of manufacturing purposes, including furniture and textile manufacturing. Also, the property is listed several times in permits as the Central Wholesale Market building. Produce sales were also part of the commercial activity of the property. In 1958, the property underwent a fire which damaged a portion of the building which was repaired (Permit #LA91924, January 20, 1958). The building continues to be used as a warehouse, sales area and production area for various small businesses and is part of the downtown Los Angeles industrial core area.

(Continued from page 2)

Integrity Statement

In regard to the seven aspects of integrity – location, design, setting, materials, workmanship, feeling and association – the c. 1903 Neoclassical style building on this property has retained its original location. The building has not been moved. The setting, feeling, and association have not remained intact as the urban area surrounding the structure has changed substantially and the building itself has had significant alterations. The design, materials and workmanship of the structure have basically remained intact bhe building has had extensive interior and exterior alterations, including door and window changes, to accommodate various tenant uses. The integrity level is fair and the condition of the building is fair.

National Register of Historic Places Eligibility Evaluation

The property was assessed under National Register of Historic Places **Criterion A** for its potential significance as part of any historic trends or events that may have made a significant contribution to the broad patterns of our history. The building was constructed as part of the overall continuing commercial development of the Los Angeles area which began in the 1880s and continues to the present time. There is no significant trend or event associated with the property. **Therefore, the property does not appear to meet the criteria for significance under Criterion A: Event.**

The property was assessed under National Register of Historic Places **Criterion B** for its potential significance and association with a person of importance in national history. There is no evidence to suggest that any of the persons associated with the construction or development of the building were considered important in the history of the property or nation. None of the persons associated with the property appear to be historically significant at the level necessary to meet the criteria for National Register of Historic Places. **Therefore, the property does not appear to meet the criteria for significance under Criterion B: Person.**

The property was assessed under National Register of Historic Places **Criterion C** for its potential significance as a property which embodies the distinctive characteristics of a type, period, method of construction or style of Neoclassical architecture, represents the work of a master architect, builder or craftsman, possesses high artistic values, or represents a significant or distinguishable entity whose components lack individual distinction. The building is a fair example of the main characteristics of the Neoclassical style. The building is a modest example of the character defining features of the Neoclassical style. The building's style does not rise to a level of significance to qualify for the National Register of Historic Places. The building is not a good example of the work of a master architect, builder or craftsman as no architect or contractor are listed for original design or construction of the structure. The building has been altered with interior changes, replacement of doors and windows with non-historic elements, removal of various equipment and storage areas. Therefore, the building cannot be considered to represent the work of a master architect, builder or craftsman and it has not retained its original integrity. **Therefore, the property does not appear to meet the criteria for significance under Criterion C: Architecture as a good example of Neoclassical style architecture.**

The property was assessed under National Register of Historic Places **Criterion D** for its potential significance and its ability to convey information. The property does not yield, or may not be likely to yield, information important in prehistory or history. In order for buildings, structures, or objects to be significant under Criterion D, they need to "be, or must have been, the principal source of information." This is not the case with this property. **Therefore, the property does not appear to meet the criteria for significance under Criterion D: Information Potential.**

In summary, the property does not appear to qualify for the National Register of Historic Places under any of the above criteria. Therefore, the building is not considered to be an historic resource for the purposes of the NHPA. The property was not accessed for eligibility under the California Register or local Los Angeles Register eligibility.

*P3a. Description: (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)
The Towne Building is a stucco over concrete, 5 story commercial and industrial building designed in the utilitarian style. The rectangular building measures approximately 70 feet high, 110 feet wide and 200 feet in length. The main façade is on the southeast side of Towne Avenue. The fifth story of the building steps in 20 feet on each side with a simple shallow pediment above the slightly protruding cornice in the middle at the top of the building. Decorative elements include the main entrance frame and triptych arched picture window. The arched window is flanked by two pilasters with three tiered newel posts which are Italian Renaissance in style. There are two sections of four level fire escapes/balconies on the southeast façade and one section of a three level fire escape/balcony on the southwest façade. The fire escapes/balconies are supported by curved stuccoed frames with red metal railings with a simple geometric design. The building is lined with simple geometric shapes on the corners and along the cornice. Multiple windows are on floors 2 through 5, they are multiple light casement windows. The ground floor has many rollup doors for the storefronts and access to the industrial designs. These rollup doors line the southeast and southwest facades. The front entrance has been sealed up removing the two large picture windows and the original door. Now the entrance has a smaller door with stucco over the windows and door openings. Situated on the north corner of East 8th Street and Towne Avenue, the Towne Building is part of the Ulm Tract, Block 6, Lots 41 through 48.

Period of Significance: 1900-1940 **Property Type:** Commercial/Industrial Building **Applicable Criteria:** C
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)
1900 to 1940 was known as the Age of Industry. During this period of producing material goods, building forms took on the necessity of being large enough to create products. The architectural theory form follows function leads to utilitarian architecture in the fact that the architectural form is designed based on its utility. Concrete was a popular building material as it could withstand the weight and stress of very large buildings. Concrete was very economical since it was poured and reinforced with iron and steel rods. Concrete served in many shapes and under a variety of conditions. Large buildings with many windows and quick access to the outside were created so that the production of material goods became more efficient. These warehouse buildings were built in pockets of cities so business owners could be in close proximity to each other so they could easily access the materials used in creating their products. Early 20th century utilitarian architecture had little or no decorative element. Often the warehouses had a subtle Classical Revival, Art Deco, Italian Renaissance, Greek Revival or other popular 20th century architectural style in addition to the basic utilitarian form.

Integrity Statement

Evaluating the Towne Building based on the seven aspects of integrity: location, design, materials, workmanship, feeling and association, the early 20th century utilitarian building has remained in its original location. The design of the main entrance has been altered. The two large picture windows have been stuccoed over and the door opening is smaller than the original. The paint is peeling and there are several broken window panes. The building sign above the main entrance has fallen apart. Most of the letters are gone and the ones that are left are unrecognizable. The materials have not been altered and the workmanship appears to have been adequate for a structure of its kind. The setting, feeling and association have remained intact as the area remains an industrial warehouse district. The property does not appear to have changed since the early 1920s and the building remains positioned on the corner of East 8th Street and Towne Avenue.

National Register of Historic Places Eligibility Evaluation

The Towne Building was evaluated under National Register of Historic Places **Criterion A** for its potential significance as part of any historic trends or events that may have made an important contribution to the broad patterns of our history. The Towne Building was constructed as part of the continued development of the Warehouse District which has been increasing since the 1900s. There is no significant trend or event associated with the building. **Therefore, the Towne Building does not appear to meet the criteria for significance under Criterion A: Event.**

The Towne Building was evaluated under National Register of Historic Places **Criterion B** for its potential significance and association with a person of importance in national history. There does not seem to be any person associated with the building that is historically significant to the level necessary for meeting the criteria for National Register of Historic Places. **Therefore, the Towne Building does not appear to meet the criteria for significance under Criterion B: Person.**

The Towne Building was evaluated under National Register of Historic Places **Criterion C** for its potential significance as a property which embodies the distinctive characteristics of a type, period, method of construction or style of early 20th century utilitarian architecture, represents the work of a master architect, builder or craftsman, possesses high artistic values, or represents a significant or distinguishable entity whose components have individual distinction. The building is a very modest form of the early 20th century utilitarian style. The building's style does not meet the level of significance to qualify for the National Register of Historic Places. None of the individuals responsible for the design or construction of the building have been identified, therefore, the building cannot be considered to represent the work of a master architect, builder or craftsman. **Therefore, the Towne Building does not appear to meet the criteria for significance under Criterion C: Architecture as a good example of Modern style architecture.**

The Towne Building was evaluated under National Register of Historic Places **Criterion D** for its potential significance and its ability to convey information. The building does not and is not likely to convey information important to history. In order for buildings, structures or objects to be considered significant under Criterion D, they need to "be, or must have been, the principal source of information." This is not the case for the Towne Building. **Therefore, the Towne Building does not appear to meet the criteria for significance under Criterion D: Information Potential.**

In summary, the Towne Building does not appear to qualify for the National Register of Historic Places under Criterion A, B, C or D. Therefore, the Towne Building is not considered to be an historic resource under the National Historic Preservation Act. The Towne Building was not evaluated for eligibility under the California Register or the local Los Angeles Register.

e. Other Locational Data:

P3a. Description:
There are 13 developed properties in the undertaking's Area of Potential Effects (APE), including the buildings in the project area at 1200 E. 5th Street, 518-524 S. Colyton Street/519-525 S. Hewitt Street, and 537-551 S. Hewitt Street. The properties at 1168 S. Colyton Street and 510 S. Hewitt Street are less than 50 years old. All of the other properties in the APE appear to be 50 years of age or older. Pursuant to Stipulation VI of the PA, qualified architectural historians have evaluated all of the properties in the APE to determine their eligibility for listing on the National Register of Historic Places (NRHP). None of the properties in the APE have been previously listed in, or determined eligible for listing in, either the NRHP or the California Register of Historical Resources or as designated as local landmarks. None of the properties is listed in the California State Historical Resources Inventory.
The buildings at 510, 530, and 550 S. Hewitt Street, which are part of the former Barker Brothers Factory and Warehouse Complex, were previously evaluated in a preliminary cultural resources assessment conducted by Chattel Architecture, Planning & Preservation, Inc., dated September 6, 2005. The assessment concluded that none of the properties within the Barker Brothers Factory and Warehouse complex qualified as historical resources either individually or as a potential historic district.

P3a. Description, Continued:

Based on NRHP criteria for evaluation (36 CFR 60.4), we have concluded that none of the developed properties in the APE are eligible for listing in the NRHP individually or as a contributor to a potential NRHP eligible historic district. Our review revealed no evidence to suggest any of the properties are historically significant due to associations with an important event or person. None appear to embody characteristics or a method of construction that would warrant special recognition, and they are not located in a cohesive neighborhood or grouping.

P3a. Description:
The property contains a one-story industrial warehouse building that spans the middle of a city block, fronting two parallel streets. It has an irregular rectangular plan and unreinforced masonry construction. The building was originally designed in a utilitarian industrial style. It was constructed in a series of nearly identical sections, each with a low-pitch vaulted roof covered with rubberized roofing and featuring low, slightly stepped parapets capped with cast stone caps. The exterior walls are clad with brick masonry. Fronting each street, the building's primary facades are asymmetrically divided and punctuated by regularly spaced, alternating window and vehicle freight door openings. The window openings are each capped with original cast stone headers and are fit with original multiple-light steel industrial windows. The freight doors contain non-original metal roll-up doors or have been equipped with non-original glazed overhead garage doors with a smaller pedestrian door at the side. The fenestration consists of an equal mix of original and non-original doors and windows throughout the building. The building is in good condition. Its integrity is fair.

P3a. Description:
The property contains a one-story commercial retail building set on a corner parcel. It has a rectangular plan with a cutaway corner and unreinforced masonry construction. The building was originally designed in a vernacular commercial style. It has a flat roof with low parapet. The parapet is topped with a non-original security fence. The exterior walls are clad with brick masonry set in a staggered pattern to create wide horizontal courses. The building's primary facades are asymmetrically divided. The west elevation is one bay wide and punctuated by a single window opening. The northern elevation is three bays wide and contains three equally spaced window openings. All of the window openings contain non-original industrial windows, slightly obscured by metal security screens. The building's primary entrance is located in the cutaway at the building's northwest corner. The original door opening has been fully enclosed. The building's south elevation fronts a paved parking lot, and a non-original masonry addition has been constructed at the building's east elevation. The building is in fair condition. Its integrity is poor.

The subject property is a three-story, U-shaped, asymmetrical, 20th Century Commercial style, hotel building located in a commercial/industrial area of the city of Los Angeles. The building has a concrete foundation, stucco exterior, and a flat roof. The building's entrance includes metal framed, fixed pane windows and metal and glass doors with a contrasting color framework around the entrance area. The entrance area contains a marquee style roof supported by metal braces. The windows are set in regular rows across the façade and the non-historic windows are rectangular shaped, metal framed slider style windows. Ground floor windows are arched. Metal security grilles are present on the ground floor windows. A metal fire escape is present on the south façade. The building is in fair condition with major door and window alterations.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

The subject property is located in South Los Angeles, also known as South Central. The area is the home of the University of Southern California which was founded in the 1880s. The area was heavily populated by the white working class as much of the area was commercial and industrial. Small bungalow homes and low-rise commercial buildings were the primary buildings in the area. During World War II, displaced African-American families moved into the area in large numbers as it was one of the few areas in the city where they were allowed to buy property due to restrictive covenants. The area suffered extensive racial violence with white gangs causing mayhem and protection groups formed by the residents. In the 1950s, the construction of major freeways further altered the original neighborhoods, causing more disruption and increasing segregation lines. Riots in the 1960s further shattered the neighborhoods. The subject property was built in c. 1913, according to the Los Angeles County Assessor's records. No original permits for the property's construction were available. Various permits have been filed for numerous changes to the building including general tenant improvements and maintenance issues. The building has been altered extensively with a new entrance area, addition of a small marquee style roof over the entrance, replacement of all original doors and windows, the addition of a stucco coating to the original brick building, and various interior upgrades. The hotel property was built as one of many working class hotels to cater to the workers in the surrounding area who were unable to buy homes or preferred this style of living. The building has continued to serve as residential space from its construction to the present time.

Continuation X Update

(Continued from page 2)

Integrity Statement

In regard to the seven aspects of integrity – location, design, setting, materials, workmanship, feeling and association – the c.1913 20th Century Commercial style hotel building on this property has retained its original location. The building has not been moved. The setting, feeling, and association have not remained intact as the urban area surrounding the structure has changed. The design, materials and workmanship have been altered by major door and window changes and various interior alterations. The integrity level is poor and the condition of the building is fair.

National Register of Historic Places Eligibility Evaluation

The property was assessed under National Register of Historic Places **Criterion A** for its potential significance as part of any historic trends or events that may have made a significant contribution to the broad patterns of our history. The building was constructed as part of the overall continuing commercial and residential development of the Los Angeles area which began in the 1850s and continues to the present time. There is no significant trend or event associated with the property. **Therefore, the property does not appear to meet the criteria for significance under Criterion A: Event.**

The property was assessed under National Register of Historic Places **Criterion B** for its potential significance and association with a person of importance in national history. There is no evidence to suggest that any of the persons associated with the construction or development of the building were considered important in the history of the property or nation. None of the persons associated with the property appear to be historically significant at the level necessary to meet the criteria for National Register of Historic Places. **Therefore, the property does not appear to meet the criteria for significance under Criterion B: Person.**

The property was assessed under National Register of Historic Places **Criterion C** for its potential significance as a property which embodies the distinctive characteristics of a type, period, method of construction or style of 20th Century Commercial architecture, represents the work of a master architect, builder or craftsman, possesses high artistic values, or represents a significant or distinguishable entity whose components lack individual distinction. The building is a limited example of the building style, it lacks any distinction or innovative elements, and the building has been altered by the replacement of all original doors and windows, a stucco coating was added to the original brick exterior, and interior alterations. The building's style does not rise to a level of significance to qualify for the National Register of Historic Places. The building is not a good example of the work of a master architect or craftsman as the no persons associated with the design or construction were identified. Therefore, the building cannot be considered to represent the work of a master architect, builder or craftsman. **Therefore, the property does not appear to meet the criteria for significance under Criterion C: Architecture as a good example of 20th Century Commercial style architecture.**

The property was assessed under National Register of Historic Places **Criterion D** for its potential significance and its ability to convey information. The property does not yield, or may not be likely to yield, information important in prehistory or history. In order for buildings, structures, or objects to be significant under Criterion D, they need to "be, or must have been, the principal source of information." This is not the case with this property. **Therefore, the property does not appear to meet the criteria for significance under Criterion D: Information Potential.**

In summary, the property does not appear to qualify for the National Register of Historic Places under any of the above criteria. Therefore, the building is not considered to be an historic resource for the purposes of the NHPA. The property was not accessed for eligibility under the California Register or local Los Angeles Register eligibility.

1 INTRODUCTION

This Noise Technical Report (Noise Study) has been prepared to evaluate potential noise impacts associated with the construction and operation of ROW DTLA Residential Project (Project) pursuant to the City of Los Angeles (City) Housing Element Checklist.

On November 24, 2021, the City Council certified the Citywide Housing Element 2021 2029 and Safety Element Updates Final Environmental Impact Report (EIR), SCH No. 2021010130, EIR No. ENV-2020-6762-EIR (Program EIR), to adopt the 2021 2029 Citywide Housing Element and the Updates to the Safety Element and the Plan for a Healthy LA (Health Element). Pursuant to CEQA Guidelines Sections 15168(c)(4) and 15168(d), Projects that are found to be within the scope of the program analyzed in the Program EIR and its environmental effects do not require further CEQA documentation. The noise analysis below has been completed in accordance with the noise mitigation measures set forth in the Program EIR and confirms that the Project would not result in significant noise impacts that were not already examined in the Program EIR.

2 PROJECT LOCATION AND EXISTING USES

The Project Site is approximately 31 acres in size. The Project Site occupies the northern half of the block bounded by E. 7th Street on the north, S. Central Avenue on the west, S. Alameda Street on the east, and E. Olympic Boulevard to the south, with the partially vacated former E. 8th and Bay streets providing internal access within the middle of the block. The Development Area is approximately 4.84 gross acres and is located within the western portion of the Project Site along Alameda Street at 747-787 S. Alameda Street, as shown in Figure 1 (on page 5). The Project Site is located in an existing industrial district east of Downtown Los Angeles. The area surrounding the Project Site is primarily developed with warehouses, cold storage facilities, small-scale manufacturing operations, and other industrial uses, though in more recent years newer commercial office, commercial retail, and residential uses have been developed in the vicinity of the Project Site.

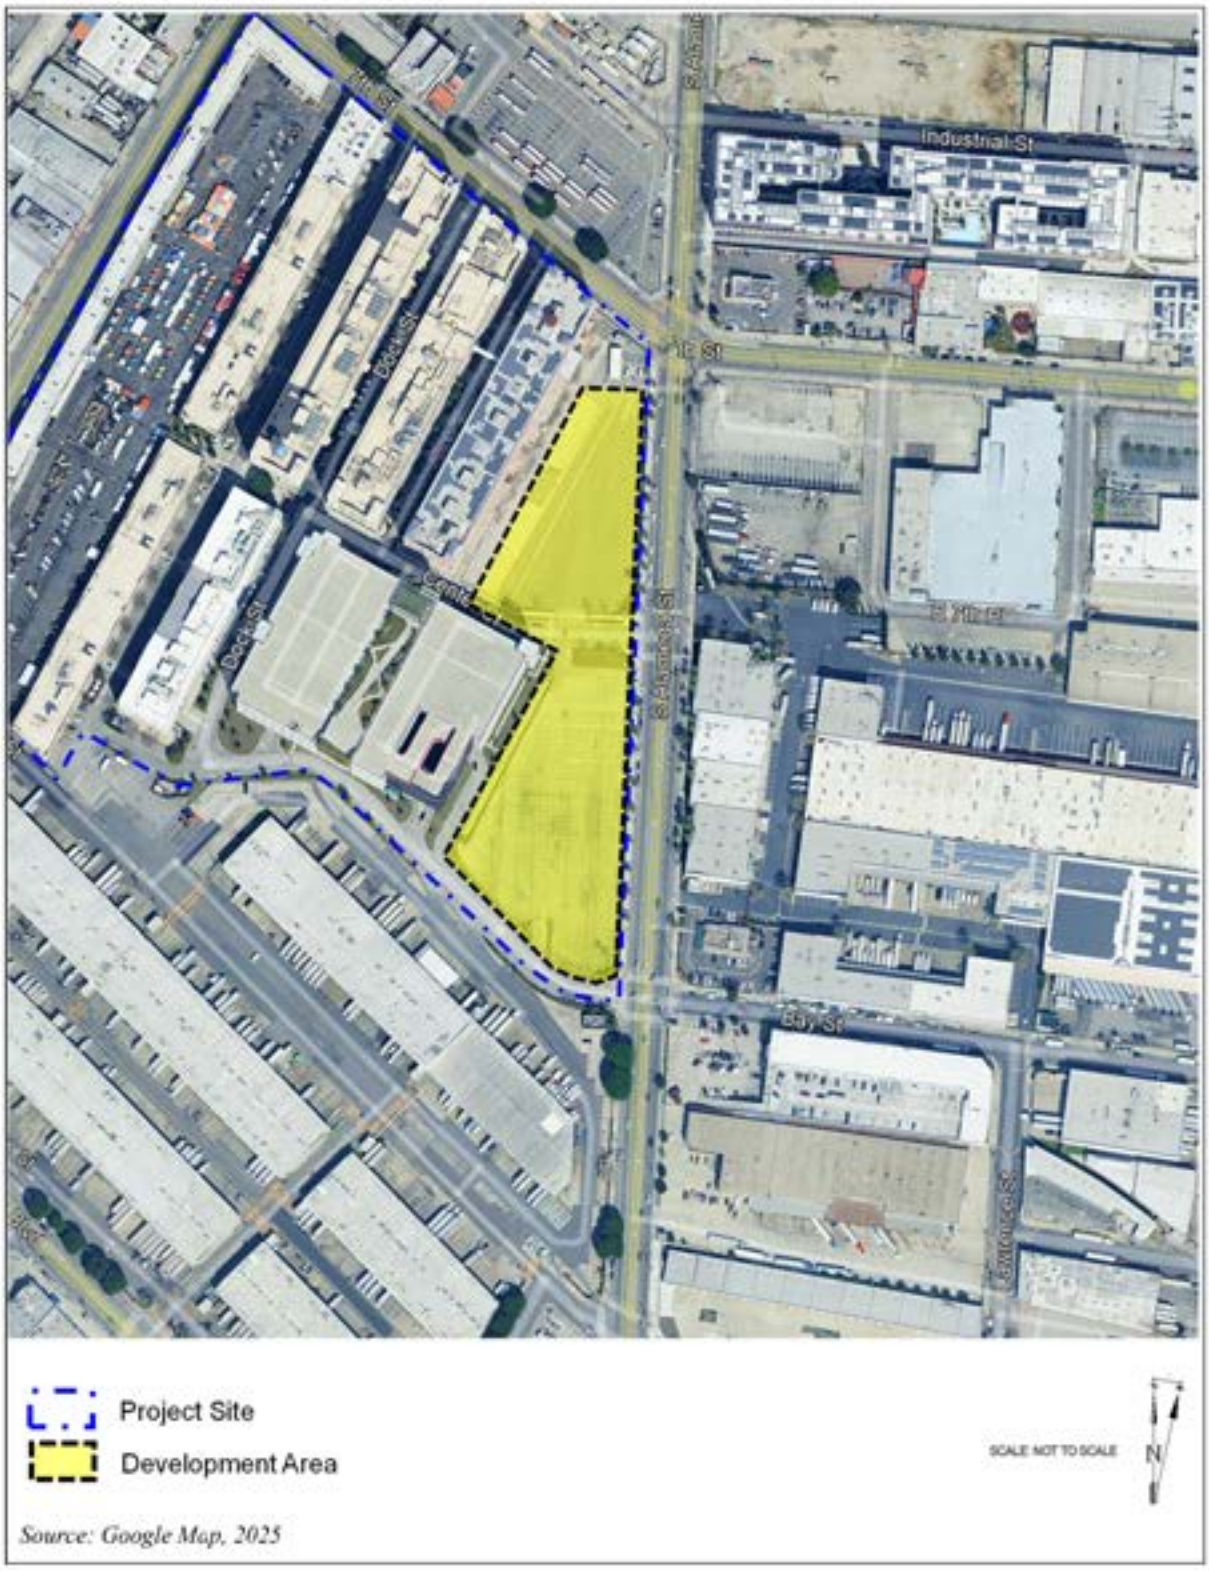

Figure 1. Project Development Area

3 PROJECT DESCRIPTION

The Project includes the development of three mixed-use buildings containing 1,000 residential units including 114 Low Income Housing units in three buildings and 6,547 square feet of commercial (retail/restaurant) uses within two buildings. Building A would include 1,119 square feet of commercial uses located on the first floor; 410 residential units at the first though eighth floors; and two levels of subterranean parking as well as above grade parking located on the first floor. Building B would include 214 residential units located on the first through eighth floors, and two levels of subterranean parking as well as above grade parking located on the first floor. Building C would include 5,428 square feet of commercial uses on the first floor; 376 residential units at the first through eighth floors; and two levels of subterranean parking as well as above grade parking located on the first floor. The proposed buildings would range from approximately 100 feet to 103 feet in height. Upon completion, 884,278 square feet of new floor would be provided. When accounting for the existing floor area to remain, approximately 2,477,695 square feet of floor area would be provided within the Project Site with a total FAR of 1.86:1. Buildings A and B will be completed in 2029 and occupied, while Building C would be under construction from 2030 to 2032. The Project would include up to 1,092 vehicular parking spaces. A total of 96,278 square feet of open space would also be provided. The existing uses within the remainder of the Project Site outside of the Development Area will remain and would not be modified by the Project.

4 HOUSING ELEMENT MITIGATION MEASURES

The Program EIR prepared a noise impact analysis to identify potential noise impacts related to implementation of the City's updated Housing Element. As part of the noise analysis, mitigation measures were included that require physical measures to be implemented during construction and operation of a project as well as noise analyses for discretionary projects meeting certain conditions. These mitigation measures are listed below along with their applicability to the Project.

Mitigation Measure 4.10-1(a) Noise Shielding and Silencing:

For all discretionary projects, power construction equipment (including combustion engines), fixed or mobile, shall be equipped with noise shielding and silencing devices consistent with manufacturer's standards or the Best Available Control Technology. Equipment shall be properly maintained, and the Project Applicant or Owner shall require any construction contractor to keep documentation on-site during any earthwork or construction activities demonstrating that the equipment has been maintained in accordance with manufacturer's specifications. Measure shall be shown on plans.

Applicability: This mitigation measure will be implemented as part of the Project.

Mitigation measure 4.10-1(b) Use of Driven Pile Systems

For all discretionary projects, driven (impact), sonic, or vibratory pile drivers shall not be used, except in locations where the underlying geology renders alternative methods infeasible, as determined by a soils or geotechnical engineer and documented in a soils report. Requirement shall show on plans.

Applicability: This mitigation measure prohibiting driven pile systems will be implemented as part of the Project..

Mitigation measure 4.10-1(c) Enclosures and Screening

For all discretionary projects, all outdoor mechanical equipment shall be enclosed or screened from off-site noise-sensitive uses. The equipment enclosure or screen shall be impermeable (i.e., solid material with minimum weight of 2 pounds per square feet) and break the line-of-sight from the equipment and off-site noise-sensitive uses.

Applicability: This mitigation measure will be implemented as part of the Project.

Mitigation measure 4.10-1(a) Construction Staging Areas

Construction staging areas shall be located as far from noise-sensitive uses as reasonably possible and feasible in consideration of site boundaries, topography, intervening roads and uses, and operational constraints. Requirement shall show on plans.

Applicability: This mitigation measure will be implemented as part of the Project.

Mitigation measure 4.10-1(e) Temporary Sound Barriers

Sound barriers, such as temporary walls or sound blankets, shall be erected between construction activities and noise-sensitive uses when construction activities are located within a line-of-sight to and within 500 feet of noise-sensitive uses. Requirement shall show on plans.

Applicability: This mitigation measure will be implemented as part of the Project.

Mitigation measure 4.10-1(j) Project-Specific Construction Noise Study

A Construction Noise Study, prepared by a qualified noise expert to meet the requirements herein, shall be required for discretionary projects in the City located within 500 feet of noise-sensitive land uses and that have one or more of the following characteristics:

- *Two or more subterranean levels or 20,000 cubic yards or more of excavated material;*
- *Construction duration (excluding architectural coatings) of 18 months or more;*

- *Use of large, heavy-duty equipment rated 300 horsepower or greater; or*
- *The potential for impact pile driving.*

The Construction Noise Study shall characterize sources of construction noise, quantify noise levels at noise-sensitive uses (e.g., residences, transient lodgings, schools, libraries, churches for other places of assembly), hospitals, nursing homes, auditoriums, concert halls, amphitheaters, playgrounds, and parks), and identify measures to reduce noise exposure. The Construction Noise Study shall identify reasonably available noise reduction devices or techniques to reduce noise levels to acceptable levels and/or: durations including through reliance on any relevant federal, state or local standards or guidelines or accepted industry practices, and in compliance with LAMC standards. Noise reduction devices or techniques may include but not be limited to mufflers, shields, sound barriers, and time and place restrictions on equipment and activities. Each measure in the Construction Noise Study shall identify anticipated noise reductions at noise-sensitive land uses.

Project Applicants shall be required to comply with all requirements of Mitigation Measures 4.10-1(a) through 4.10-5(e) in addition to any additional requirements identified and recommended by the Construction Noise Study and shall maintain proof that notice of, as well as compliance with, the identified measures have been included in contractor agreements.

Applicability: The Construction Noise Study required by this measure is provided in the analysis below.

Mitigation measure 4.10-2 Project-Specific Operational Noise Study

A Noise Study, prepared by a qualified noise expert to meet the requirements herein, shall be required for all discretionary housing developments with roof decks and/or pool decks in the City of Los Angeles concurrent with Design Review and prior to the approval of building permits. The Noise Study shall include:

- *Description of pertinent noise regulations.*
- *Analysis of operational noise generated by the project's roof decks and/or pool decks to noise-sensitive land uses.*
- *Comparison of noise levels to applicable City thresholds, such as if the project's operational noise would exceed 3 dBA in an unacceptable land use category or 5 dBA in an acceptable land use category per the City's land use compatibility guidelines included in the City of Los Angeles General Plan Noise Element.*
- *If project noise would exceed City thresholds, identification of mitigation measures to reduce noise to below 3 dBA in an unacceptable land use category or 5 dBA in an acceptable land use category to the extent feasible. Mitigation measures may include,*

but would not be limited to, operational restrictions, sound dampening equipment, or sound walls.

- *Each mitigation measure in the Noise Study shall identify anticipated noise reductions at noise-sensitive land uses.*
- *Applicant/owners shall comply with the mitigation plan and include the measures in construction contracts.*
- *Mitigation plan shall be included on plans.*

Applicability: The operational noise analysis required by this measure is provided in the analysis below.

Mitigation measure 4.10-3(a) Vibration Control Plan

For construction activity for discretionary projects involving vibratory rollers or sonic pile drivers within 50 feet of an extremely fragile building (non-engineered masonry) or historical resource (designated or in SurveyLA or other City recognized survey), the Applicant shall prepare a Vibration Control Plan. The Vibration Control Plan requirement shall also apply to use of impact pile drivers within 140 feet of extremely fragile buildings or historical resources or residential structures. The Vibration Control Plan shall be prepared by a licensed structural engineer and shall include methods to minimize vibration, including, but not limited to:

- *Use of drilled piles or similar method rather than impact pile driving*
- *Use of rubber-tired equipment rather than metal-tracked equipment*
- *Avoiding the use of vibrating equipment when allowed by best engineering practices*

The Vibration Control Plan shall include a pre-construction survey letter establishing baseline conditions at potentially affected extremely fragile buildings/historical resources. The survey letter shall provide a shoring design to protect the extremely fragile buildings/historical resources from potential damage. At the conclusion of vibration causing activities, the qualified structural engineer shall issue a follow-up letter describing damage, if any, to impacted buildings. The letter shall include recommendations for any repair, as may be necessary, in conformance with the Secretary of the Interior Standards. Repairs shall be undertaken and completed by the Contractor and monitored by a qualified structural engineer in conformance with all applicable codes including the California Historical Building Code (Part 8 of Title 24).

A Statement of Compliance, in a form approved by the City, committing the Applicant and Owner to complying with the measure shall be signed by the Applicant and Owner is required to be submitted to the Los Angeles Department of Building and Safety (LADBS) at plan check and prior to the issuance of any permit. The Vibration Control Plan, prepared as outlined

above shall be documented by a qualified structural engineer, and shall be provided to the City upon request. Vibration Control Plan shall show on the plans.

Applicability: This mitigation measure will be implemented as part of the Project.

Mitigation measure 4.10-3(b) Vibration Mitigation

For all discretionary projects:

- *Impact pile drivers shall be avoided to eliminate excessive vibration levels. Drilled piles or similar methods are alternatives that shall be utilized where geological conditions permit their use.*
- *Construction activities shall involve rubber-tired equipment rather than metal-tracked equipment.*

The construction contractor shall manage construction phasing (scheduling demolition, earthmoving, and ground-impacting operations so as not to occur in the same time period), use low-impact construction technologies, and shall avoid the use of vibrating equipment when allowed by best engineering practices.

Requirement to be on plans.

Applicability: This mitigation measure will be implemented as part of the Project.

5 NOISE ANALYSIS IN ACCORDANCE WITH MITIGATION MEASURES 4.10-1(F) AND 4.10-2

5.1 Fundamentals of Sound and Environmental Noise

Noise is commonly defined as sound that is undesirable because it interferes with speech communication and hearing, causes sleep disturbance, or is otherwise annoying (unwanted sound). The decibel (dB) is a conventional unit for measuring the amplitude of sound because it accounts for the large variations in sound pressure amplitude and reflects the way people perceive changes in sound amplitude. The human hearing system is not equally sensitive to sound at all frequencies. Therefore, to approximate this human frequency-dependent response, the A-weighted filtering system is used to adjust measured sound levels (dBA). The term "A-weighted" refers to filtering the noise signal in a manner that corresponds to the way the human ear perceives sound. Examples of various sound levels in different environments are provided in Table 1 (on page 12).[1]

Generally, people judge the relative magnitude of sound sensation by subjective terms such as "loudness" or "noisiness." To a person with normal hearing, a change in sound level of 3 dB is considered "just perceptible," a change in sound level of 5 dB is considered "clearly noticeable," and a change (i.e., increase) of 10 dB is generally recognized as "twice as loud" as the original sound.[2]

5.1.1 Outdoor Sound Propagation

In an outdoor environment, sound levels attenuate (reduce) through the air as a function of distance. Such attenuation is commonly referred to as "distance loss" or "geometric spreading," and is based on the noise source configuration (e.g., point source, or line source). For a point source, such as a piece of mechanical/electrical/construction equipment (e.g., air conditioner, electrical transformer, or bulldozer), the rate of sound attenuation is about 6 dB per doubling of distance from the noise source. For example, an outdoor condenser fan that generates a sound level of 60 dBA at a distance of five feet would attenuate to 54 dBA at a distance of 10 feet. For a line source, such as a constant flow of traffic on a roadway, the rate of sound attenuation is about 3 dB per doubling of distance.[3]

In addition, structures (e.g., buildings and solid walls) and natural topography (e.g., hills) that obstruct the acoustics line-of-sight between a noise source and a receptor further reduce the noise level at the receptor if the receptor is located within the "shadow" of the obstruction, such as behind a sound wall. This type of sound attenuation is known as "barrier insertion loss." If

---

1 *All sound levels measured in decibel (dB) in this study are relative to $2x10^{-5}$ N/m^2.*

2 *Caltrans, Technical Noise Supplement (TeNS), Table 2.10, 2013.*

3 *Caltrans, Technical Noise Supplement (TeNS), Chapter 2.1.4.1, 2013.*

a receptor is located behind the wall but still has a view of the source (i.e., line-of-sight is not fully blocked), some barrier insertion loss would still occur, however to a lesser extent. Additionally, a receptor located on the same side of the wall as a noise source may actually experience an increase in the perceived noise level as the wall reflects noise back to the receptor, thereby compounding the noise. Outdoor noise barriers can provide noise level reductions ranging from approximately 5 dBA (where a barrier just breaks the acoustic line-of-sight between the noise source and receiver) to an upper range of 20 dBA with a more substantial barrier.[4]

Table 1. Typical Noise Levels

Common Outdoor Activities	Noise Levels, dBA	Common Indoor Activities

5.1.2 Environmental Noise Descriptors

Several rating scales have been developed to analyze the adverse effect of environmental noise on people. Since environmental noise fluctuates over time, these scales consider the total acoustical energy content, as well as the time and duration of occurrence. The most frequently used noise descriptors, including those used by the City, are summarized below.

Equivalent Sound Level (L_{eq}). L_{eq} is a measurement of the acoustic energy content of noise averaged over a specified time period. Thus, the L_{eq} of a time-varying sound and that of a steady sound are the same if they deliver the same amount of energy to the receptor's ear during exposure. L_{eq} for one-hour periods, during the daytime or nighttime hours, and 24 hours are commonly used in environmental noise assessments. L_{eq} can be measured for any time period, but is typically measured for an increment of no less than 15 minutes for environmental studies. As discussed below, the analysis herein includes the use of an 8-hour average ($L_{eq(8\text{-hour})}$) for construction noise impacts, per the City recently adopted Construction Noise and Vibration Updates to Thresholds and Methodology.

Community Noise Equivalent Level (CNEL). CNEL is the time average of all A-weighted sound levels for a 24-hour day period with a 10 dBA adjustment (increase) added to the sound levels that occur in the nighttime hours (10:00 P.M. to 7:00 A.M.) and a 5 dBA adjustment (increase) added to the sound levels that occur in the evening hours (7:00 P.M. to 10:00 P.M.). These adjustments attempt to account for increased human sensitivity to noise during the quieter nighttime periods, when the ambient background noise is lower and where sleep is the most probable activity. CNEL has been adopted by the State of California as the rating scale to be used to define the community noise environment for development of the community noise element of a General Plan and is also used by the City of Los Angeles for its land use planning.[5]

5.2 Ground-borne Vibration

Vibration is commonly defined as an oscillatory motion through a solid medium in which the motion's amplitude can be described in terms of displacement, velocity, or acceleration. The peak particle velocity (PPV) or the root-mean square (RMS) velocity is usually used to describe vibration amplitudes. PPV is defined as the maximum instantaneous peak of the vibration signal and is typically used for evaluating potential building damage.[6] The RMS velocity is defined as the square-root of the average of the squared amplitude of the vibration signal and is used for evaluating human response to ground-borne vibration.[7] Decibel notation (VdB) is

---

[5] *State of California, General Plan Guidelines, 2017.*

[6] *Vibration levels described in this report are in terms peak particle velocity level in the unit of inches per second.*

[7] *FTA, "Transit Noise and Vibration Impact Assessment," Section 5, September 2018.*

commonly used to express RMS vibration velocity amplitude.[8] The relationship of PPV to RMS velocity is expressed in terms of the "crest factor," defined as the ratio of the PPV amplitude to the RMS amplitude. PPV is typically a factor of 1.7 to 6 times greater than RMS vibration velocity; FTA uses a crest factor of 4.[9] Ground-borne vibration generated by man-made activities (e.g., road traffic, construction operations) typically weakens with greater horizontal distance away from the source of the vibration. The vibration impact studies show in most circumstances common ground-induced vibrations related to roadway traffic and construction activities pose no threat to buildings or structures.[10]

5.3 Regulatory Framework

There are several plans, regulations, and programs that include policies, requirements, and guidelines applicable to the Project regarding noise at the federal, State, regional, and local levels. As described below, these plans, guidelines, and laws include the following:

- Federal Transportation Administration Vibration Standards Regarding Human Annoyance
- Occupational Safety and Health Act of 1970
- Office of Planning and Research Guidelines for Noise Compatible Land Use
- Caltrans Vibration Criteria for Building Damage
- Los Angeles County Airport Land Use Commission Comprehensive Land Use Plan
- City of Los Angeles Municipal Code
- City of Los Angeles General Plan Noise Element

5.3.1 Federal

5.3.1.1 Federal Transit Administration Vibration Standards Regarding Human Annoyance

There are no federal vibration standards or regulations adopted by any agency that are applicable to evaluating vibration impacts from land use development projects, such as the Project. However, the FTA has adopted standards associated with human annoyance for determining the groundborne vibration and noise impacts from ground-borne noise. With regard to sensitive uses, such as residential uses the FTA has established a threshold of 80 VdB

---

[8] *VdB (velocity level in decibel) = 20 x Log (V / V_{ref}), where V is the RMS velocity amplitude in micro-inch per second and V_{ref} is the reference velocity amplitude of $1x10^{-6}$ inch per second (1 micro-inch per second).*

[9] *FTA, "Transit Noise and Vibration Impact Assessment," Section 5, September 2018.*

[10] *FTA, "Transit Noise and Vibration Impact Assessment," Section 5, September 2018.*

for infrequent events. The City uses this threshold for construction activities that occur within the nighttime hours.

5.3.1.2 Occupational Safety and Health Act of 1970

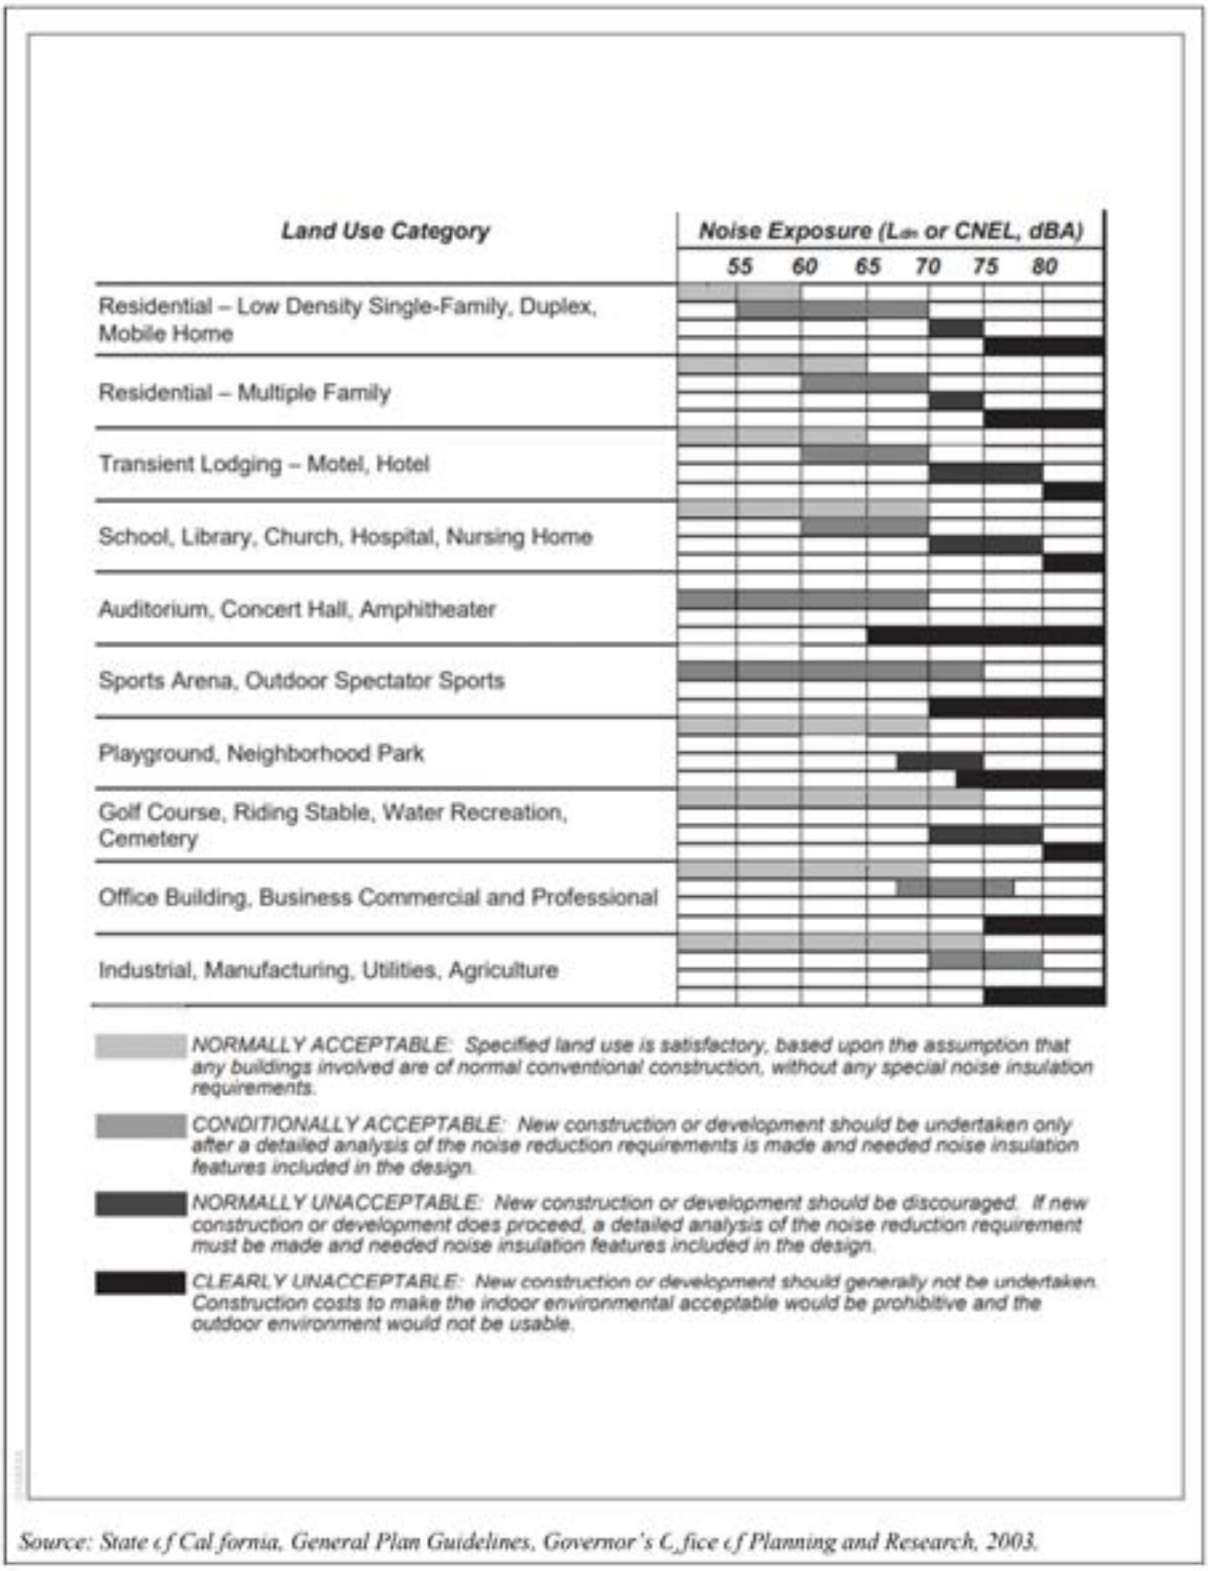
Under the Occupational Safety and Health Act of 1970 (29 United States Code [USC] Sections 1919 et seq.), the Occupational Safety and Health Administration (OSHA) has adopted regulations designed to protect workers against the effects of occupational noise exposure. These regulations list permissible noise level exposure as a function of the amount of time during which the worker is exposed. The regulations further specify a hearing conservation program that involves monitoring noise to which workers are exposed, ensuring that workers are made aware of overexposure to noise, and periodically testing the workers' hearing to detect any degradation.

5.3.2 State

5.3.2.1 Office of Planning and Climate Innovation Guidelines for Noise Compatible Land Use

The State of California has not adopted Statewide standards for environmental noise, but the Governor's Office of Planning and Climate Innovation has established guidelines for evaluating the compatibility of various land uses as a function of community noise exposure, as presented in Figure 2 (on page 17). The purpose of these guidelines is to maintain acceptable noise levels in a community setting for different land use types. Noise levels are divided into four general categories, which vary in range according to land use type: "normally acceptable," "conditionally acceptable," "normally unacceptable," and "clearly unacceptable." The City of Los Angeles (City) has developed its own compatibility guidelines in the Noise Element of the General Plan based in part on the Office of Planning and Climate Innovation Guidelines. California Government Code Section 65302 requires each county and city in the State to prepare and adopt a comprehensive long-range general plan for its physical development, with Section 65302(f) requiring a noise element to be included in the general plan. The noise element must identify and appraise noise problems in the community and analyze and quantify current and projected noise levels.

The State has also established noise insulation standards for new multi-family residential units, hotels, and motels. These requirements are collectively known as the California Noise Insulation Standards (Title 24 of the California Code of Regulations [CCR]). The noise insulation standards set forth an interior standard of 45 dBA CNEL in any habitable room. The standards require an acoustical analysis demonstrating how dwelling units have been designed to meet this interior standard where such units are proposed in areas subject to exterior noise levels greater than 60 dBA CNEL. Title 24 standards are typically enforced by local jurisdictions through the building permit application process.



The State of California's noise insulation standards for nonresidential uses are provided in the California Code of Regulations, Title 24, Building Standards Administrative Code, Part 11, California Green Building Standards (CALGreen) Code. The CALGreen Code noise standards are applied to new or renovation construction projects in California to control interior noise levels resulting from exterior noise sources. Proposed projects may use either the prescriptive method (CALGreen Code Section 5.507.4.1) or the performance method (CALGreen Code Section 5.507.4.2) to show compliance. Under the prescriptive method, a project must demonstrate transmission loss ratings for the wall and roof-ceiling assemblies and exterior windows when located within a noise environment of 65 dBA CNEL or higher. Under the performance method, a project must demonstrate that interior noise levels do not exceed 50 dBA $L_{eq(1hr)}$.

5.3.2.2 Caltrans Criteria for Building Damage

Caltrans uses specific criteria to assess potential building damage associated with construction activities. Specifically, Table 19 of its Transportation and Construction Vibration Guidance Manual includes the following criteria for building damage based on building type:

- Fragile Buildings: 0.1 PPV
- Historic Buildings: 0.25 PPV
- Older Residential Structures: 0.3 PPV
- New Residential Structures: 0.5 PPV
- Modern Industrial/Commercial Buildings: 0.5 PPV

These criteria are used in the analysis below.

Figure 2. Guidelines for Noise Compatibility Land Use

5.3.3 Local

5.3.3.1 City of Los Angeles General Plan Noise Element

The overall purpose of the Noise Element of the General Plan is to guide policymakers in making land use determinations and adopting noise ordinances that would limit exposure of citizens to excessive noise levels. The following policies and objectives from the Noise Element of the General Plan are applicable to the Project:[11]

1. Objective 2 (Non-airport): Reduce or eliminate non-airport related intrusive noise, especially relative to noise-sensitive uses.

2. Policy 2.1: Enforce and/or implement applicable City, State, and federal regulations intended to mitigate proposed noise producing activities, reduce intrusive noise and alleviate noise that is deemed a public nuisance.

3. Objective 3 (Land Use Development): Reduce or eliminate noise impacts associated with proposed development of land and changes in land use.

4. Policy 3.1: Develop land use policies and programs that will reduce or eliminate potential and existing noise impacts.

Table 2 (on page 19) provides the exterior noise standard associated with various land uses, as provided in the City's Noise Element. According to the City, an exterior noise environment up to 70 dBA CNEL is "conditionally acceptable" for noise sensitive uses (e.g., residential, hotel, school). In addition, noise levels up to 75 dBA CNEL are "normally unacceptable", while noise levels at 75 dBA CNEL and above are "clearly unacceptable" for residential.

[11] *City of Los Angeles, Noise Element of the Los Angeles City General Plan, adopted February 3, 1999.*

Table 2. City of Los Angeles Noise Land Use Compatibility

Land Use	Day-Night Average Exterior Sound Level (CNEL dBA)						
	50	55	60	65	70	75	80
Residential Single Family, Duplex, Mobile Home	A	C	C	C	N	U	U
Residential Multi-Family	A	A	C	C	N	U	U
Transient Lodging, Motel, Hotel	A	A	C	C	N	U	U
School, Library, Church, Hospital, Nursing Home	A	A	C	C	N	N	U
Auditorium, Concert Hall, Amphitheater	C	C	C	C/N	U	U	U
Sports Arena, Outdoor Spectator Sports	C	C	C	C	C/U	U	U
Playground, Neighborhood Park	A	A	A	A/N	N	N/U	U
Golf Course, Riding Stable, Water Recreation, Cemetery	A	A	A	A	N	A/N	U
Office Building, Business, Commercial, Professional	A	A	A	A/C	C	C/N	N
Agriculture, Industrial, Manufacturing, Utilities	A	A	A	A	A/C	C/N	N

[1] *A - Normally Acceptable: Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction without any special noise insulation requirements.*

[2] *C - Conditionally Acceptable: New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning will normally suffice.*

[3] *N - Normally Unacceptable: New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.*

[4] *U - Clearly Unacceptable: New construction or development should generally not be undertaken.*

5.3.3.2 City of Los Angeles Municipal Code

Chapter XI, Noise Regulation, of the LAMC (referred to herein as the Noise Regulations) establishes acceptable ambient sound levels and is intended to regulate intrusive noises (e.g., stationary mechanical equipment and vehicles other than those traveling on public streets) within specific land use zones and to provide procedures and criteria for the measurement of the sound level of noise sources. These procedures recognize and account for differences in the perceived level of different types of noise and/or noise sources. In accordance with the Noise Regulations, a noise level increase from certain regulated noise sources of 5 dBA over the existing or presumed ambient noise level at an adjacent property line is considered a

violation of the Noise Regulations. The 5-dBA increase above ambient is applicable to City-regulated noise sources (e.g., mechanical equipment), and is applicable any time of the day.[12]

The Noise Regulations state that the baseline ambient noise environment shall be the actual measured ambient noise level or the City's presumed ambient noise level, whichever is greater. The actual ambient noise level is the measured noise level averaged over a period of at least 15 minutes, L_{eq} (15-minute). The Noise Regulations state that in cases where the actual measured ambient conditions are not known, the City's presumed daytime (7:00 A.M. to 10:00 P.M.) and nighttime (10:00 P.M. to 7:00 A.M.) ambient noise levels defined in Section 111.03 of the LAMC should be used. The City's presumed ambient noise levels for specific land use zones, as set forth in LAMC Section 111.03, are provided in Table 3 (below).

Table 3. City of Los Angeles Presumed Ambient Noise Levels

Zone	Daytime (7:00 A.M. to 10:00 P.M.) dBA (L_{eq})	Nighttime (10:00 P.M. to 7:00 A.M.) dBA (L_{eq})
Residential, School, Hospitals, Hotels	50	40
Commercial	60	55
Manufacturing (M1, MR1, and MR2)	60	55
Heavy Manufacturing (M2 and M3)	65	65

Source: LAMC Section 111.03.

The Noise Regulations also address off-road vehicle-related noise, including in Section 114.02, which prohibits the operation of any motor-driven vehicles upon any property within the City in a manner that would cause the noise level on the premises of any occupied residential property to exceed the ambient noise level by more than 5 dBA, and in Section 114.06, which requires that vehicle theft alarm systems be silenced within five minutes.

LAMC Section 112.01 limits noise from amplified voice and music and prohibits the operation of such devices (e.g., radio, musical instrument, phonograph, television receiver, or other machine) or other sounds in such a manner as to disturb the peace, quiet, and comfort of neighbors. Specifically, noise from such uses or operation that is audible at a distance in excess of 150 feet from the property line of the noise source within a residential zone of the City or within 500 feet thereof is prohibited.

LAMC Section 112.02 limits increases in noise levels from air conditioning, refrigeration, heating, pumping and filtering equipment. Such equipment may not be operated in such a manner as to create any noise which would cause the noise level on the premises of any other

[12] *Los Angeles Municipal Code, Chapter XI, Section 112.02.*

occupied property, or, if a condominium, apartment house, duplex, or attached business, within any adjoining unit, to exceed the ambient noise level by more than 5 dB.

LAMC Section 112.05 set a maximum noise level from construction equipment (powered equipment or powered hand tools) operating between the hours of 7:00 A.M. and 10:00 P.M., in any residential zone of the City or within 500 feet thereof, of 75 dBA, measured at a distance of 50 feet from the source, unless compliance with this limitation is technically infeasible.[13] Section 41.40 of the LAMC prohibits construction noise that disturbs persons occupying sleeping quarters in any dwelling, hotel, or apartment or other place of residence between the hours of 9:00 P.M. and 7:00 A.M. Monday through Friday, before 8:00 A.M. and after 6:00 P.M. on Saturday or national holiday, and at any time on Sunday. Construction hours may be extended with approval from the Executive Director of the Board of Police Commissioners.

LAMC Section 113.01 prohibits collecting or disposing of rubbish or garbage, operating any refuse disposal truck, or collecting, loading, picking up, transferring, unloading, dumping, discarding, or disposing of any rubbish or garbage, as such terms are defined in LAMC Section 66.00, within 200 feet of any residential building between the hours of 9:00 P.M. and 6:00 A.M. of the following day, unless a permit has been duly obtained beforehand from the Board of Police Commissioners.

LAMC Section 91.1206.14.2 prohibits interior noise levels attributable to exterior sources from exceeding 45 dBA in any habitable room. The noise metric shall be either the day-night average sound level (Ldn) or the CNEL, consistent with the noise element of the local general plan.

With regard to vibration, LAMC Section 91.3307.1 states, "Adjoining public and private property shall be protected from damage during construction, remodeling, and demolition work. Protection must be provided for footings, foundations, party walls, chimneys, skylights, and roofs. Provisions shall be made to control water runoff and erosion during construction or demolition activities."

With respect to construction noise and vibration, the City recently published and adopted a Construction Noise and Vibration Updates to Thresholds and Methodology Report. This document provides updated construction noise and vibration thresholds to be used in assessing environmental impacts of projects in accordance with CEQA. These updated thresholds are included below.

---

[13] *In accordance with the Noise Regulations (LAMC Chapter XI, Section 112.05), "technically feasible" means that the established noise limitations can be complied with at a project site, with the use of mufflers, shields, sound barriers, and/or other noise reduction devices or techniques employed during the operation of equipment.*

5.4 Existing Conditions

The predominant source of noise in the vicinity of the Project Site is vehicular traffic on adjacent roadways, particularly along Alameda Street and 7th Street, which have high volumes of traffic. Other ambient noise sources in the vicinity of the Project Site include industrial activities (e.g., truck loadings); commercial activities; surface parking lot activities; and other miscellaneous noise sources associated with typical urban activities such as human voices, overhead aircraft, and emergency vehicle sirens.

5.4.1.1 Noise-Sensitive Receptors

Some land uses are considered more sensitive to intrusive noise than others based on the types of activities typically engaged in at those land uses. The Noise Element defines noise-sensitive land uses as single-family and multi-unit dwellings, long-term care facilities (including convalescent and retirement facilities), dormitories, motels, hotels, transient lodging, and other residential uses; houses of worship; hospitals; libraries; schools; auditoriums; concert halls; outdoor theaters; nature and wildlife preserves; and parks. In addition, based on the updates to the City's construction noise and vibration thresholds and methodology, recording studios are also considered a sensitive use relative to construction vibration impacts.

Based on a review of the land uses in the vicinity of the Project Site, four (4) noise receptor locations were selected to represent existing noise-sensitive uses within 500 feet of the Project Site (receptor locations R1 through R4). These locations represent areas with land uses that could qualify as noise-sensitive uses according to the definition above. As discussed below, noise measurements were conducted at the four off-site locations to establish baseline noise conditions in the vicinity of the Project Site. In addition, the measurement locations provide an adequate basis to evaluate potential noise impacts at other sensitive receptors located beyond the measurement location in the same direction from the Project Site. The locations of the four off-site noise-sensitive receptor locations are shown on Figure 3 (on page 23) and described in Table 4 (on page 25).

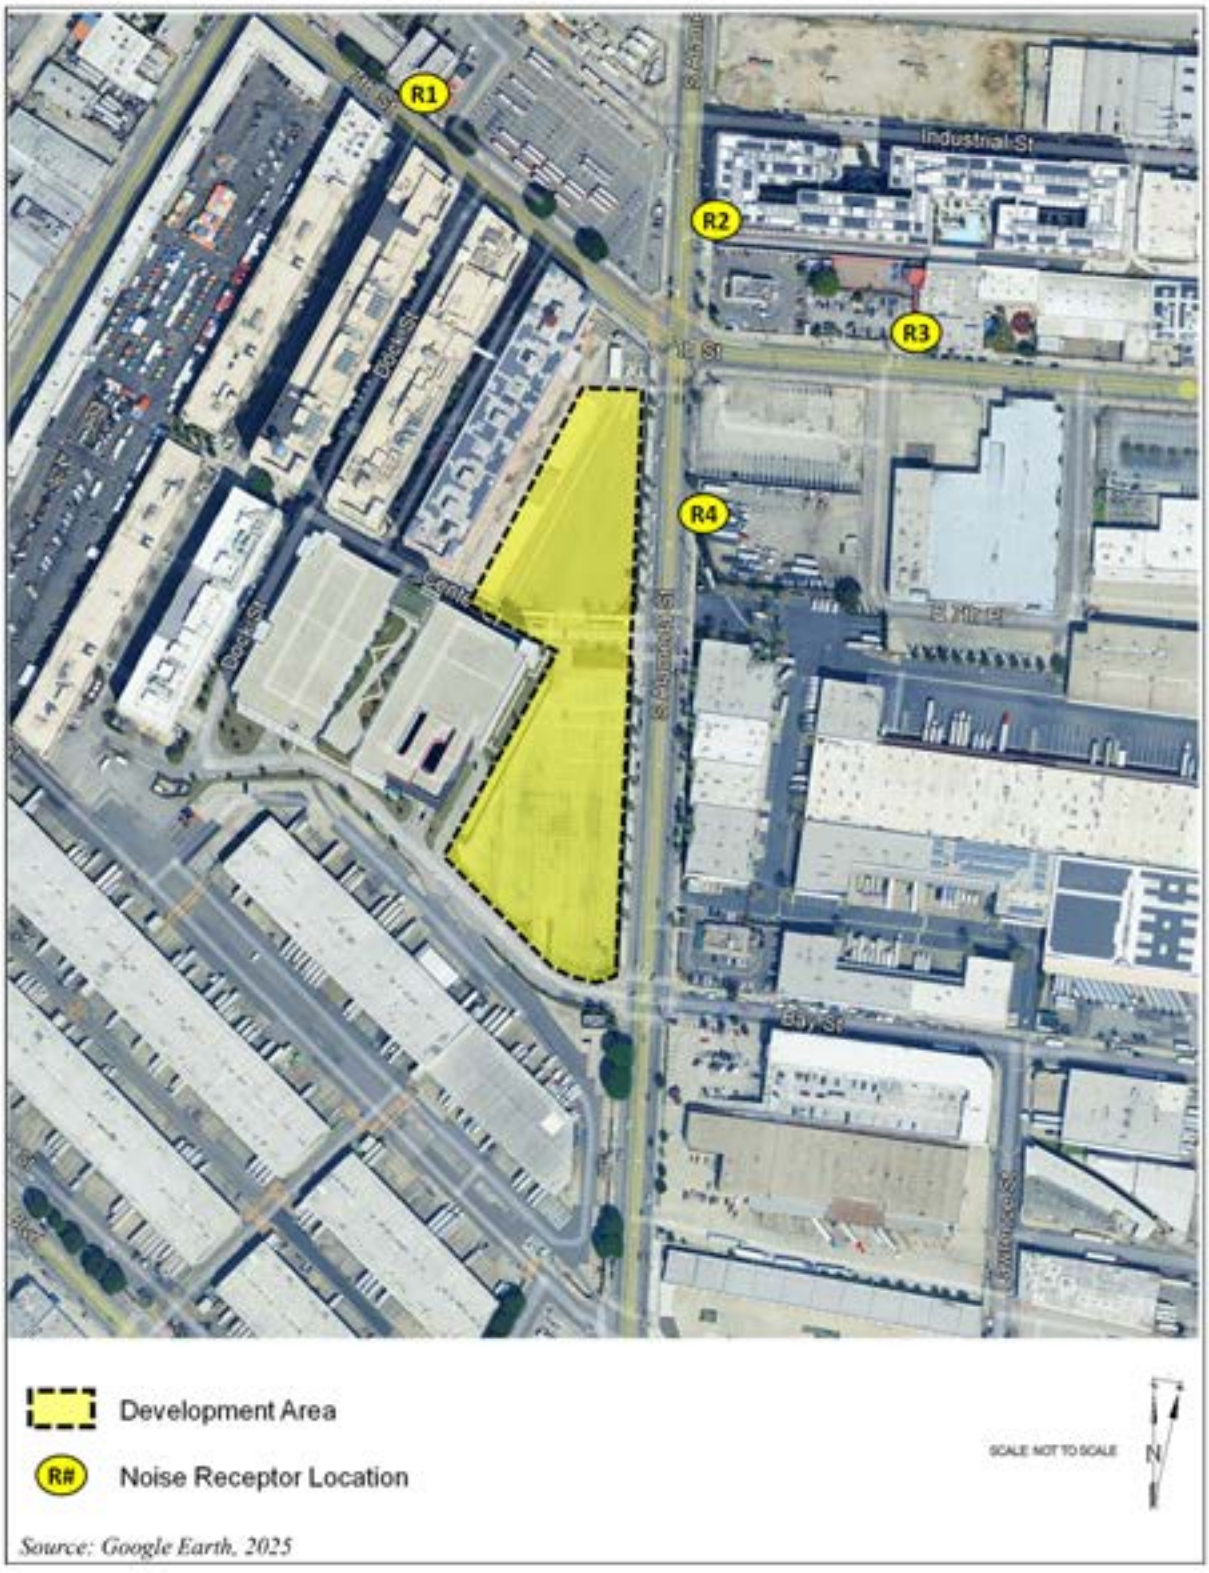

Figure 3. Noise Measurement Locations

5.4.1.2 Ambient Noise Levels

Ambient noise measurements were taken at the four selected off-site locations on January 13, 2025. The baseline noise monitoring program was conducted, using a Larson-Davis Model 870 and a Quest Technologies Model 2900 Integrating/Logging Sound Level Meters.[14] A 24-hour measurement was recorded at receptor location R1.[15] Two 15-minute measurements were conducted at each of the remaining receptor locations during daytime and nighttime hours. The daytime ambient noise levels were measured between 10:00 A.M. and 12:00 P.M., and the nighttime ambient noise levels were measured between 10:00 P.M. and 12:00 A.M. The ambient noise measurements procedure followed the City's standards, which require ambient noise to be measured over a period of at least 15 minutes.[16]

The results of the ambient sound measurements are summarized in Table 4 (on page 25). Based on field observations, the current ambient noise at the measurement locations is dominated by local traffic and, to a lesser extent, helicopter flyovers and other typical urban noises. As indicated in Table 4, the existing daytime ambient noise levels at the off-site noise receptor locations ranged from 67.9 dBA (L_{eq}) at receptor location R2 to 73.4 dBA (L_{eq}) at receptor locations R1 and R3. The measured nighttime ambient noise levels ranged from 62.9 dBA (L_{eq}) at receptor location R2 to 72.0 dBA (L_{eq}) at receptor location R1. Thus, the existing ambient noise levels at all off-site locations are above the City's presumed daytime and nighttime ambient noise levels of 50 dBA (L_{eq}) and 40 dBA (L_{eq}), respectively, for residential, school, and hotel uses. Consistent with the LAMC, the measured existing ambient noise levels are used as the baseline conditions for purposes of determining the Project's potential noise impacts.

---

[14] *These sound meters meet the minimum industry standard performance requirements for "Type 1" (Larson-Davis Model 870) and "Type 2" (Quest Technologies Model 2900) standard instruments as defined in the American National Standard Institute (ANSI) S1.4. It also meets the requirement specified in Section 111.01(i) of the LAMC that instruments be "Type S2A" standard instruments or better. The sound meter was calibrated prior to the measurements and operated according to the manufacturer's written specifications.*

[15] *A 24-hour measurement is typically conducted at one receptor location to obtain the pattern and validate the noise measurements at other receptor locations.*

[16] *LAMC Section 111.01.*

Table 4. Existing Ambient Noise Levels

Receptor Location	Approximate Distance to Project Site,[a] Feet	Measured Ambient Noise Levels, dBA L_{eq}	
		Daytime Hours (7 A.M. to 10 P.M.)	Nighttime Hours (10 P.M. to 7 A.M.)
R1 – Hotel use located on the north side of 7th Street, northwest of the Project Site	580	73.4[b]	72.0[b]
R2 – Multi-family residential use located on the east side of Alameda Street, northeast of the Project Site	320	67.9	62.9
R3 – School use located on the north side of 7th Street, northeast of the Project Site	485	73.4	64.2
R4 – Proposed studio use located on the east side of Alameda Street, east of the Project Site	105	70.4	64.5

[a] Distances are estimated based on Google Earth map and are referenced to the Project nearest boundary.
[b] Levels shown for R1 represent the average for the entire daytime and nighttime periods.
Source: AES, 2025; Detail measurements data are provided in Appendix A.

5.4.1.3 Existing Ground-Borne Vibration Levels

Based on field observations, the primary source of existing ground-borne vibration in the vicinity of the Project Site, including the Development Area, is vehicular travel (e.g., standard cars, refuse trucks, delivery trucks, construction trucks, school buses, and buses) on local roadways. According to the FTA technical study "Federal Transit Administration: Transit Noise and Vibration Impacts Assessments," typical road traffic-induced vibration levels are unlikely to be perceptible by people. Specifically, the FTA study reports that "[i]t is unusual for vibration from sources such as buses and trucks to be perceptible, even in locations close to major roads." Trucks and buses typically generate ground-borne vibration velocity levels of around 63 VdB (at 50 feet distance), and these levels could reach 72 VdB when trucks and buses pass over bumps in the road. Per the FTA, 75 VdB is the dividing line between barely perceptible (with regards to ground vibration) and distinctly perceptible.[17] Therefore, existing ground vibration is generally below the perceptible level. However, ground vibration associated with heavy trucks traveling on road surfaces with irregularities, such as speed bumps and potholes, could reach the perceptible threshold.

.

[17] *FTA, "Transit Noise and Vibration Impact Assessment," Table 5-5, September 2018.*

5.4.2 Construction Noise

In accordance with the Updates to Thresholds and Methodology for Construction Noise and Vibration, a project would normally have a significant impact on noise levels from construction if:

- During daytime hours (between 7:00 A.M. to 7:00 P.M. Monday through Friday and between 8:00 A.M. to 6:00 P.M. on Saturday), project construction-related noise exceeds 80 dBA $L_{eq(8\text{-hour})}$ at sensitive uses[18] (at the property line with outdoor uses or at the exterior of the building).
- During nighttime hours (between 7:00 P.M. to 7:00 A.M. Monday through Friday and between 6:00 P.M. to 8:00 A.M. on Saturdays, and anytime on Sundays or national holidays), project construction-related noise level at sensitive uses[19] where sleep is expected exceeds the following:
  - 55 dBA $L_{eq(1\text{-hour})}$ for sensitive uses within older buildings that would have operable windows that may be open,
  - 65 dBA $L_{eq(1\text{-hour})}$ for sensitive uses with windows closed and are single-glazed, or
  - 70 dBA $L_{eq(1\text{-hour})}$ for sensitive uses that have newer construction (i.e., the structures have been designed to ensure that an interior 45 dBA is obtained with double-paned windows).

  Mat pour activities (and other types of concrete pour, which require an extended continuous pour beyond the allowable construction hours) that are required to occur during nighttime hours for less than five days are exempt from this threshold; or
- During nighttime hours (between 7:00 P.M. to 7:00 A.M. Monday through Friday and between 6:00 P.M. to 8:00 A.M. on Saturdays, and anytime on Sundays or national holidays) project construction-related noise results in a 5 dBA increase above the ambient noise level at nighttime noise-sensitive uses (at the property line with outdoor uses are at the exterior of the building). Mat pour activities (and other types of concrete pour, which

---

[18] *Daytime noise-sensitive uses include single-family and multi-unit dwellings, long-term care facilities (including convalescent and retirement facilities), dormitories, motels, hotels, transient lodging, and other residential uses; places of assembly including churches or houses of worship; hospitals; libraries; schools; auditoriums; concert halls; outdoor theaters; nature and wildlife preserves; outdoor public recreational areas; and parks. This definition does not include private residential balconies which may or may not extend past the exterior of a building, or to private outdoor spaces.*

[19] *Nighttime noise sensitive uses include single-family and multi-unit dwellings, long-term care facilities (including convalescent and retirement facilities), dormitories, motels, hotels, transient lodging, and other residential uses; nature and wildlife preserves; outdoor public recreational areas; and parks. This definition does not apply to private residential balconies or private outdoor spaces.*

required an extended continuous pour beyond the allowable construction hours) that are required to occur during nighttime hours for less than five days are exempt from this threshold.

5.4.3 Operational Noise

Per Mitigation Measure 4.10-2 of the Program EIR, the only operational noise impacts that should be evaluated when using the Housing Element Checklist are those associated with outdoor amplification systems within roof decks/pool decks. Noise impacts from operation of amplification systems from roof decks/pool decks would be significant if:

- The Project causes the ambient noise levels measured at the property line of affected noise-sensitive uses to increase by 3 dBA in CNEL in an unacceptable land use category ("normally unacceptable" or "clearly unacceptable" or 5 dBA in an acceptable land use category ("normally acceptable" or "conditionally acceptable"), per the City's land use category guidelines (see Table 2 on page 19 for a description of these categories); or
- The Project increases the ambient noise level (hourly L_{eq}) at noise-sensitive uses by 5 dBA and more.

5.4.4 Ground-borne Vibration Standards and Guidelines

The Updates to Thresholds and Methodology for Construction Noise and Vibration provides vibration limits based on Caltrans' and FTA's guidelines to evaluate potential vibration impacts related to building damage and human annoyance, respectively.[20,21] Based on Caltrans' guidance, impacts relative to ground-borne vibration associated with potential building damage would be considered significant if any of the following events were to occur:

- Project construction activities cause groundborne vibration levels to exceed the following building damage thresholds for identified structures:
  - Fragile Buildings: 0.1 PPV
  - Historic Buildings: 0.25 PPV
  - Older Residential Structures: 0.3 PPV
  - New Residential Structures: 0.5 PPV

    Modern Industrial/Commercial Buildings: 0.5 PPV

[20] *Caltrans, Transportation and Construction Vibration Guidance Manual, September 2013.*

[21] *FTA, Transit Noise and Vibration Impact Assessment Manual, September 2018.*

Based on FTA guidance, construction vibration impacts associated with human annoyance would be significant if the following were to occur:

- During nighttime hours (between 7:00 P.M. to 7:00 A.M. Monday through Friday and between 6:00 P.M. to 8:00 A.M. on Saturdays, and anytime on Sundays or national holidays), project construction activities generate groundborne vibration levels that exceed 80 VdB at the exterior of a sensitive use building.

There is no threshold for human annoyance when construction activities occur during the hours permitted by the LAMC (i.e., during daytime hours between 7:00 A.M. to 7:00 P.M. Monday through Friday and between 8:00 A.M. to 6:00 P.M. on Saturday).

5.5 Methodology

5.5.1 On-Site Construction Activities

Noise impacts due to on-site construction activities associated with the Project were evaluated by calculating the construction-related noise levels at representative sensitive receptor locations and comparing these estimated construction-related noise levels associated with construction of the Project to the 80-dBA ($L_{eq(8\text{-hour})}$) significance threshold. Construction noise associated with the Project was analyzed based on the Project's potential construction equipment inventory, construction durations, and construction schedule. The construction noise model for the Project is based on construction equipment noise levels as published by the FHWA's "Roadway Construction Noise Model (FHWA 2006)."[22] These maximum noise levels would occur when equipment is operating under full power conditions (i.e., the equipment engine at maximum speed). However, equipment used on a typical construction site often operates under less than full power conditions, or part power. To more accurately characterize construction-period noise levels, the 8-hour average ($L_{eq(8\text{-hour})}$) noise level associated with each construction stage is calculated based on the quantity, type, and usage factors for each type of equipment that would be used during each construction stage.[23] These noise levels are typically associated with multiple pieces of equipment operating simultaneously. The on-site construction-related noise levels were calculated by distributing all construction equipment over the entire construction site. The on-site construction noise levels were calculated using the SoundPLAN (version 8.2) computer noise prediction model.[24]

---

[22] *The reference noise levels for construction equipment from the FHWA are based on measurements of newer construction equipment (published in 2006), rather than the noise levels from the USEPA report referenced in the L.A. CEQA Thresholds Guide (published in 1971).*

[23] *Pursuant to the FHWA Roadway Construction Noise Model User's Guide, 2006, page 7, the usage factor is the percentage of time during a construction noise operation that a piece of construction is operating at full power.*

[24] *SoundPLAN GmbH, SoundPLAN version 8.2, 2020.*

SoundPLAN is widely used by acoustical engineers as a noise modeling tool for environmental noise analysis. The ambient noise levels at surrounding sensitive receptor locations were based on field measurement data (see Table 4 on page 25).

5.5.2 Off-Site Construction Haul Trucks

Off-site construction noise impacts from haul trucks associated with the Project were analyzed using FHWA's TNM. The TNM is the current Caltrans standard computer noise model for traffic noise studies. The noise model allows for the input of roadways, noise receivers, and sound barriers, if applicable. The construction-related off-site truck volumes were obtained from the Transportation Assessment prepared for the Project. The TNM calculates the hourly L_{eq} noise levels generated by construction-related haul trucks. Noise impacts were determined by comparing the predicted noise level of construction-related haul trucks plus the ambient noise levels with that of the existing ambient noise levels along the Project's anticipated haul route(s).

5.5.3 On-Site Stationary Noise Sources (Operation)

The Project's potential on-site stationary point-source noise impacts were evaluated by (1) identifying the noise levels that would be generated by the Project's stationary noise sources, i.e., outdoor activities (e.g., use of the outdoor roof deck and terraces and the use of amplified sound systems); (2) calculating the noise level from each noise source at the identified surrounding representative sensitive-receptor property line locations; and (3) comparing such noise levels to the measured ambient noise levels to determine significance. The on-site stationary noise sources were calculated using SoundPLAN computer noise prediction model.

5.5.4 Construction Vibration

Ground-borne vibration impacts due to the Project's construction activities were evaluated by identifying potential vibration sources (i.e., construction equipment), estimating the vibration levels at the identified representative sensitive-receptor locations, and comparing the Project's vibration levels at those locations to the applicable vibration significance criteria, as described below. Vibration levels were calculated based on the Caltrans published standard vibration velocities for various construction equipment operations. The vibration velocities were calculated based on a point source with standard distance propagation conditions, pursuant to Caltrans procedures. Construction of the Project would not use impact pile driving methods and as such, impact pile driving vibration is not included in this construction vibration analysis.[25]

[25] *Caltrans, "Transportation and Construction Vibration Guidance Manual", September 2013 .*

5.6 Project Design Feature

The following project design feature is proposed with regard to noise:

Project Design Feature PDF-NOI-1: Outdoor amplified sound systems, if any, will be designed so as not to exceed the maximum noise level of 80 dBA ($L_{eq\text{-}1hr}$) at a distance of 15 feet from the amplified speaker sound systems at the Level 2 and Level 8 outdoor spaces so as to comply with the noise levels specified by the LAMC. A qualified noise consultant will provide written documentation at plan check that the design of the system complies with these maximum noise levels.

5.7 Analysis of Project Impacts

5.7.1 Construction Noise

Project construction is anticipated to commence in June 2026 and be completed in August 2032. Construction of the Project would commence with the site preparation/ demolition of existing surface parking, followed by grading and excavation, building foundations, building construction, paving/concrete installation, and landscape installation. In accordance with LAMC requirements, construction activities generally would be permitted to occur Monday through Friday from 7:00 A.M. to 9:00 P.M. and between 8:00 A.M. and 6:00 P.M. on Saturday or on national holidays, or outside of these hours if an after-hours construction permit is approved by the Los Angeles Board of Police Commissioners. Construction delivery/haul trucks would travel on approved truck routes between the Project Site and the I-10 Freeway. Trucks leaving the Project Site are anticipated to exit on Alameda Street and head south to the Freeway I-10 eastbound. Trucks coming to the Project Site are anticipated to exit the I-10 westbound at Alameda Street, head north on Alameda Street to the Project Site.

5.7.1.1 On-Site Construction Noise

Noise impacts from Project-related construction activities occurring within or adjacent to the Development Area would be a function of the noise generated by construction equipment, the location of the equipment, the timing and duration of the noise-generating construction activities, and the relative distance to noise-sensitive receptors. Construction activities for the Project would generally include demolition of surface parking areas, site grading and excavation, building foundation, building construction, and paving/landscape. Each stage of construction would involve the use of various types of construction equipment and would, therefore, have its own distinct noise characteristics. Demolition generally involves the use of backhoes, front-end loaders, and heavy-duty trucks. Grading and excavation typically require the use of earth-moving equipment, such as excavators, front-end loaders, and heavy-duty trucks. Building construction typically involves the use of cranes, forklifts, concrete trucks, pumps, and delivery trucks. Noise from construction equipment would generate both steady-

state and episodic noise that could be heard within and adjacent to the Project Site. In addition, Project construction phases would have the potential to overlap. Therefore, overlapping construction noise activities were evaluated to determine the potential impacts

Individual pieces of construction equipment that would typically be used for construction produce maximum noise levels of 74 dBA to 90 dBA at a reference distance of 50 feet from the construction equipment, as shown in Table 5 (on page 32). The construction equipment noise levels produced at the 50-foot distance (Reference Maximum Noise Levels at 50 Feet) shown in Table 5 are taken from the FHWA Roadway Construction Noise Model User's Guide (RCNM, 2006), which is a technical report containing actual measured noise data for construction equipment.[26] These maximum noise levels would occur when equipment is operating under full power conditions (i.e., the equipment engine at maximum speed). However, equipment used on construction sites often operates under less than full power conditions, or part power. To characterize construction-period noise levels more accurately, the 8-hour average ($L_{eq(8\text{-hour})}$) noise level associated with each construction stage is calculated based on the quantity, type, and usage factors for each type of equipment that would be used during each construction stage.[27] These noise levels are typically associated with multiple pieces of equipment operating simultaneously.

Table 6 (on page 33) provides the estimated construction noise levels for various construction phases at the four off-site noise-sensitive receptor locations. As indicated in Table 6, the estimated noise levels during all stages of Project construction, would be below the significance threshold at all off-site receptor locations. In addition, as discussed above, construction would not occur during nighttime hours and thus would not exceed the nighttime construction thresholds above.

The construction phases of the Project would have the potential to overlap. Therefore, overlapping construction noise activities were evaluated to determine the potential impacts. Construction noise impacts associated with the overlapping construction are provided in Table 7 (on page 34). As indicated in Table 7, the estimated noise levels due to overlapping construction activities would be below the significance thresholds at all off-site receptor locations. Therefore, temporary noise impacts associated with the Project's on-site construction would be less than significant.

5.7.1.2 Off-Site Construction Noise

In addition to on-site construction noise sources, other noise sources may include materials delivery, concrete mixing, and haul trucks (collectively called construction trucks), as well as construction worker vehicles accessing the Project Site during construction. Typically, construction trucks generate higher noise levels than construction worker vehicles. The major noise sources associated with off-site construction trucks would be from the material delivery/concrete/haul trucks. With regard to haul routes, as described above, construction haul trucks would travel between the Project Site and I-10 Freeway via Alameda Street.

The peak period (i.e., hourly truck trips) of construction with the highest number of construction trucks would occur during the building foundation phase. During this construction stage, there would be a maximum of approximately 124 haul/delivery trucks coming to and leaving the Project Site (equal to 248 total trips) per day. In addition, there would be up to approximately 100 concrete trucks (equal to 200 total trips) during the foundation/structure stage per day. There would also be approximately 10 to 150 construction worker trips traveling to and from the Project Site on a daily basis during the various construction stages. Construction workers are expected to arrive at the Project Site before construction starts and leave when construction ends. Therefore, construction workers vehicle noise would not overlap with Project construction equipment or trucks. In addition, the noise levels generated by construction worker vehicle trips would be lower than the construction truck trips.[28]

Table 8 (on page 36) provides the estimated number of construction-related truck trips, including haul/concrete/material delivery trucks, and the estimated noise levels along the anticipated truck route(s) associated with Project construction. As indicated in Table 8, the hourly noise levels generated by Project construction trucks would be below the 80-dBA ($L_{eq(8\text{-}hour)}$) allowable daytime significance threshold along the anticipated truck routes. As discussed above, the Project construction stages would have the potential to overlap. Therefore, noise levels due to off-site construction trucks associated with overlapping construction stages were evaluated to determine potential impacts.

Table 9 (on page 37) provides the estimated off-site construction trucks due to overlapping constructions. As indicated in Table 9, the estimated noise levels generated due to overlapping construction trucks would be below the 80-dBA ($L_{eq(8\text{-}hour)}$) allowable daytime significance threshold. In addition, as discussed above, construction would not occur during nighttime hours and thus would not exceed the nighttime construction thresholds above. Therefore, temporary noise impacts from off-site construction trucks along the haul routes would be less than significant.

---

[28] *Based on 1NM noise model, a truck generates approximately 14 dBA louder than an automobile.*

The Project also includes off-site improvements construction, including installation of utility connections along Alameda Street just east of the Project Site. Table 10 (on page 38) provides the estimated construction noise levels for the off-site improvements at the four off-site receptor locations. As indicated in Table 10, the estimated off-site improvements construction noise levels would be below the significance thresholds at all off-site receptor locations. Therefore, temporary noise impacts from off-site improvements construction would be less than significant.

5.7.2 Operational Noise

This section provides a discussion of potential operational noise impacts on off-site noise-sensitive receptors, from activities associated with the proposed outdoor spaces (located at Level 2 and Level 8). The Project would include various outdoor spaces (common open spaces) located on Level 2 and Level 8. Noise sources associated with outdoor uses typically include noise from people gathering and conversing. Per the recent State's Assembly Bill No. 1307 (AB 1307), the effects of noise generated by project occupants and their guests on human beings is not a significant effect on the environment for residential projects for purposes of CEQA. Therefore, the noise analysis associated with people speaking or other noise generated by project occupants and their guests is not included. An additional potential noise source associated with outdoor spaces would be the use of an outdoor sound system (e.g., music or other sounds broadcast through an outdoor mounted speaker system) in the outdoor spaces. As set forth in Project Design Feature NOI-PDF-1, above, if an amplified sound system is used in outdoor areas, it would be designed so as not to exceed the maximum noise level of 80 dBA

L_{eq} at Level 2 and Level 8, thereby ensuring that the amplified sound system would not exceed the significance criterion (i.e., an increase of 5 dBA L_{eq}) at any off-site noise-sensitive receptor location.

Table 11 (below) presents the estimated noise levels at the off-site sensitive receptors resulting from the use of amplified sound system at the Project's outdoor areas, in terms of hourly (L_{eq}). As presented in Table 11, the estimated noise levels would range from 34.5 dBA (L_{eq}) at the uses represented by receptor location R1 to 56.6 dBA (L_{eq}) at the uses represented by receptor location R2. Further, the estimated ambient noise levels at all off-site receptor locations with the addition of the Project's outdoor spaces would be below the significance criterion of 5 dBA (L_{eq}) above ambient noise levels. As such, the Project's noise impact from the use of the outdoor spaces would be less than significant.

Table 11. Outdoor Amplification System Noise Levels (L_{eq})

Receptor Location	Existing Ambient Noise Levels, dBA (L_{eq})	Estimated Noise from Outdoor Uses, dBA (L_{eq})	Ambient + Project Noise Levels, dBA (L_{eq})	Significance Criteria[a] dBA (L_{eq})	Exceed over Significance Criteria	Significant Impact?
R1	72.0	34.5	72.0	77.0	0.0	No
R2	62.9	56.6	63.8	67.9	0.0	No
R3	64.2	50.5	64.4	69.2	0.0	No
R4	64.5	52.1	64.7	69.5	0.0	No

Notes:
[a] *Significance Criteria are equivalent to the measured daytime or nighttime ambient noise levels, whichever is lower plus 5 dBA, per the City of Los Angeles Noise Regulations.*
Source: AES, 2025. See Appendix C.

In addition to the noise analysis in terms of hourly L_{eq}, Table 12 (on page 40) presents the estimated outdoor amplification system noise levels in terms of 24-hour CNEL at the five off-site sensitive receptor locations. As indicated in Table 12, the noise level from Project operation at all off-site receptor locations would be below the more stringent 3-dBA significance criterion as the ambient plus Project noise level falls within the normally unacceptable (70 to 75 CNEL) range for residential land use categories. As such, noise level impacts due to use of an outdoor amplification system would be less than significant.

Based on the above, Project operations would not result in the generation of a substantial permanent increase in ambient noise levels in the vicinity of the Project in excess of standards established in the City's general plan or noise ordinance, or applicable standards of other agencies. Therefore, the Project's operational noise impacts would be less than significant.

Table 12. Outdoor Amplification System Noise Levels (CNEL)

Receptor Location	Existing Ambient Noise Levels, dBA (CNEL)	Estimated Noise from Outdoor Uses, dBA (CNEL)	Ambient + Project Noise Levels, dBA (CNEL)	Significance Criteria[a] dBA (CNEL)	Exceed over Significance Criteria	Significant Impact?
R1	78.8	38.6	78.8	81.8	0.0	No
R2	69.1	60.7	69.3	74.1	0.0	No

[a] *Significance Criteria are equivalent to the measured daytime or nighttime ambient noise levels, whichever is lower plus 5 dBA, per the City of Los Angeles Noise Regulations.*

Source: AES, 2025. See Appendix C.

5.7.3 Construction Vibration

Construction activities can generate varying degrees of ground vibration, depending on the construction procedures and the type of construction equipment used. The operation of construction equipment generates vibrations that spread through the ground and diminish in amplitude with distance from the source. The effect on buildings located in the vicinity of a construction site often varies, depending on soil type, ground strata, and construction characteristics of the receptor buildings. The results from vibration can range from no perceptible effects at the lowest vibration levels to low rumbling sounds and perceptible vibration at moderate levels. However, ground-borne vibrations from construction activities rarely reach levels that damage structures.

As described above, Project construction activities would occur during the daytime hours from 7:00 A.M. to 9:00 P.M. Monday through Friday and between 8:00 A.M. and 6:00 P.M. on Saturday. As discussed above, there is no significance threshold associated with human annoyance during construction when construction occurs within the hours permitted by the LAMC.

5.7.3.1 Building Damage Impacts from On-Site Construction

With regard to potential building damage, the Project would generate ground-borne construction vibration during building demolition and site excavation/grading activities when heavy construction equipment, such as large bulldozers, drill rigs, and loaded trucks, would be used. Caltrans has published standard vibration velocities for various construction equipment operations. Table 13 (on page 42) provides the estimated ground vibration velocity levels (in terms of inch per second PPV) at the nearest off-site structures to the Development Area. The assessment of construction vibration provided above for potential building damage due to on-site construction compares the estimated vibration levels generated during construction of the Project to the 0.25 PPV significance criterion for the nearest historic structure to the west and the 0.5 PPV significance criterion for modern industrial/commercial buildings (applicable to the existing industrial buildings to the north, south, and east). As indicated in Table 13, the estimated vibration levels at the off-site buildings would be below both the 0.25 PPV and 0.3 PPV building damage significance criteria. Therefore, vibration impacts (pursuant to the significance criteria for building damage) from on-site construction activities would be less than significant.

Table 13. Construction Vibration Impacts – Building Damage

Receptor Location[a]	Estimated Vibration Velocity Levels at the Off-Site Buildings, PPV (inch/second),[b]						Significance Criteria, PPV (inch/ second)	Sig. Impacts?
	Vibratory Roller	Large Bulldozer	Caisson Drilling	Loaded Trucks	Jack-hammer	Small Bulldozer

5.7.3.2 Building Damage Impacts from Off-Site Construction

As indicated above, the Project also includes construction of off-site improvements, including installation of utility main, adjacent to the Project Site to the east. Off-site improvements would utilize smaller construction equipment (e.g., a trencher and small loader), which would not generate excessive vibration levels. In addition, construction equipment for the off-site improvements would be a minimum of 20 feet from any off-site buildings. Therefore, temporary vibration impacts from the construction of the required off-site improvements with respect to building damage would be less than significant.

As described above, construction delivery/haul trucks would travel between the Project Site and the I-10 Freeways via Alameda Street. Heavy-duty construction trucks would generate ground-borne vibration as they travel along the Project's anticipated haul route(s). Thus, an analysis of potential vibration impacts using the building damage criteria for ground-borne vibration along the anticipated local haul routes was conducted.

Regarding building damage, based on FTA data, the vibration generated by a typical heavy-duty truck would be approximately 63 VdB (0.00566 PPV) at 50 feet.[29] According to the FTA

[29] *FTA, "Transit Noise and Vibration Impact Assessment," Figure 5-4, September 2018.*

"[i]t is unusual for vibration from sources such as buses and trucks to be perceptible, even in locations close to major roads." Nonetheless, there are existing buildings along the Project's anticipated haul route that are situated approximately 20 feet from the right-of-way and would be exposed to ground-borne vibration levels of approximately 0.022 PPV, as provided in the noise calculation worksheets included in Appendix B. This estimated vibration generated by construction trucks traveling along the anticipated haul route(s) would be well below the building damage criteria of 0.25 PPV for historic buildings. Therefore, vibration impacts (pursuant to the significance criteria for building damage) from off-site construction activities (i.e., construction trucks traveling on public roadways) would be less than significant.

5.8 Cumulative Impact Analysis

The Project, together with the related projects and future growth, could contribute to cumulative noise impacts. The potential for cumulative noise impacts to occur is specific to the distance between each related project and their stationary noise sources (i.e., construction equipment and amplified sound system at the roof decks/pool decks).

5.9 Construction Noise

5.9.1 On-Site Construction Noise

Based on the Project Transportation Assessment, twenty-two (22) related projects were identified in the vicinity of the Project Site. Noise from construction of related projects is typically localized and has the potential to affect noise-sensitive uses within 300 feet from the construction site.[30] Thus, noise from construction activities for two projects within 300 feet of each other can contribute to a cumulative noise impact for receptors located midway between the two construction sites. Of the 22 related projects located in the vicinity of the Project Site, 21 related projects are located more than 500 feet from the Project Site and acoustically shielded by the existing intervening building structures (noise shield). These related projects would not contribute to the cumulative on-site construction noise impacts. The nearest related project is Related Project No. 2, a mixed-use development, located at 668 Alameda Street, approximately 330 feet northeast of the Project Site. However, Related Project No. 2 has already been constructed and would not contribute to the cumulative on-site construction noise impacts. Therefore, based on distance sound attenuation and shielding provided by existing buildings, construction-related noise from all other related projects would be well below the 80 dBA ($L_{eq(8\text{-hour})}$) threshold and would not contribute to cumulative construction-related noise impacts, and cumulative noise impacts associated with on-site construction would be less than significant.

[30] *Typical construction noise level at 300 feet distance would be approximately 70 dBA, which would be 10 dBA below the 80 dBA $L_{eq(8\text{-hour})}$ significance criteria and would not result in significant noise increase.*

5.9.2 Off-Site Construction Noise

In addition to the cumulative impacts of on-site construction activities, off-site construction haul trucks would have the potential to result in cumulative impacts if the trucks for the related projects and the Project were to utilize the same haul route. As analyzed above, the estimated off-site construction noise levels would be a minimum 15.0 dBA below the significance criteria along the anticipated truck route, i.e., Alameda Street. It is estimated that the cumulative truck trips would need to exceed 1,429 haul truck trips per hour along Alameda Street, for the off-site construction truck noise levels to reach or exceed the significance criteria of 80 dBA ($L_{eq(8\text{-}hour)}$). As indicated above, the Project would generate up to 46 haul truck trips per hour during the site grading/excavation phase. There are three related projects in the vicinity of the Project Site, which could utilize the same truck routes, including Related Project No. 1, Related Project No. 2, and Related Project No 3. As indicated above, Related Project No. 2 has been constructed and thus would not contribute to the cumulative off-site construction noise impacts. Related Project No. 3 would generate up to 105 truck trips per hour.[31] There is no available information as related to the truck trips associated with Related Project No. 1. However, it is estimated that the construction-related truck trips for Related Project No. 1 would be similar or less than the Project, based on the proposed development (i.e., 344 live/work units Related Project No. 1 and 1,000 residential units for the Project). Therefore, based on the above, the potential cumulative increase in total truck trips is not anticipated to reach 1,429 truck trips per hour along the anticipated truck route. As such, cumulative off-site construction noise impacts would be less than significant.

5.10 Operational Noise

The Project Site and surrounding area have been developed with uses that have previously generated and will continue to generate noise from a number of community noise sources, including outdoor activity areas. All related projects are of a residential, retail, commercial, or institutional nature, and these uses are not typically associated with excessive exterior noise levels. Due to provisions set forth in the LAMC that limit stationary source noise from items, such as outdoor amplified sound, noise levels would be less than significant at the property line for each related project. In addition, as discussed above, noise impacts associated with operations within the outdoor areas of the Project Site would be less than significant. Therefore, based on the distance of the related projects from the Project Site and the operational noise levels associated with the Project, cumulative stationary source noise impacts associated with operation of the Project and related projects would be less than significant.

[31] *City of Los Angeles, East End Studios ADLA, Draft Environmental Impact Report, Table IV.G-13, July 2024.*

5.10.1 Construction Vibration

5.10.1.1 On-Site Construction Vibration

Groundborne vibration decreases rapidly with distance from the vibration source. Potential vibration impacts due to construction activities are generally limited to buildings/structures that are in proximity to the construction site (i.e., within 25 feet as related to building damage).[32] As discussed above, the Project would not result in significant impacts associated with vibration during construction. The nearest related project is Related Project No. 2, which is located approximately 330 feet from the Project Site. However, as discussed above, Related Project No. 2 has been constructed and would not contribute to the cumulative on-site construction vibration impacts. Therefore, the Project would not contribute to a cumulative construction vibration impact with respect to building damage associated with on-site construction and the cumulative impact would be less than significant.

5.10.1.2 Off-Site Construction Vibration

As previously discussed, based on FTA data, the vibration generated by a typical heavy truck would be approximately 63 VdB (0.00566 PPV) at a distance of 50 feet from the truck.[33] In addition, according to the FTA "[i]t is unusual for vibration from sources such as buses and trucks to be perceptible, even in locations close to major roads." As discussed above, there are existing buildings that are approximately 20 feet from the right-of-way of the anticipated truck route(s) for the Project (i.e., Alameda Street). These buildings are anticipated to be exposed to ground-borne vibration levels of approximately 0.022 PPV. Trucks from the related projects are expected to generate similar ground-borne vibration levels. Therefore, the vibration levels generated from off-site construction trucks associated with the Project and other related projects along the anticipated truck route(s) would be below the building damage significance criteria of 0.25 PPV (for historic buildings). Therefore, potential cumulative vibration impacts with respect to building damage from off-site construction would be less than significant.

5.11 Mitigation Measures

As analyzed above, based on the analysis required by the noise mitigation measures in the Program EIR, the Project would not result in significant noise impacts associated with both Project construction and operation. However, the Project would implement the Mitigation Measures, as required by the Program EIR. No additional mitigation measures are required.

---

Construction Vibration Impacts

Reference Levels at 25 feet are based on FTA, 2006 (Transit Noise and Vibration Impact Assessment)
Calculations using FTA procedure with n= **1.1** (for receptors 25 feet or greater)
n= **1.1** (for receptors less than 25 feet, per Caltrans procedure)

ON-SITE CONSTRUCTION ACTIVITIES

Table 1: Construction Equipment Vibration Levels (PPV) - Building Damage

Equipment	Reference Vibration Levels at 25 ft., PPV	Estimated Vibration Levels at nearest off-site building structures, distance in feet, PPV							
		Industrial Building to the North		Industrial Building to the South		Industrial Building to the East		7-Story Building to the West (historic)	
		Distance	Level	Distance	Level	Distance	Level	Distance	Level
Vibratory Roller	0.210	20	0.268	170	0.026	105	0.043	50	0.098

SWCA Project No. 86148
SWCA Cultural Resources Report No. 23-74

November 4, 2025

Keywords: California Environmental Quality Act (CEQA); City and County of Los Angeles; archaeological and tribal cultural resources, literature search, archival research, geoarchaeological assessment; management/planning; 4.8 acres; Yaanga, Gabrielino; Zanja No. 2, Zanja No. 3; Feliz (Felix) Gallardo, Don Antonio Francisco Coronel; Township 1 South, Range 13 West, Section 22 and 27; U.S. Geological Survey (USGS) Los Angeles, California, 7.5-minute topographic quadrangle

EXECUTIVE SUMMARY

Purpose and Scope: SWCA Environmental Consultants (SWCA) prepared this cultural resources assessment for the proposed ROW DTLA Residential Project (the Project) in an industrialized area in the east of the Downtown Los Angeles, California. The Project proposes the demolition of existing surface parking lots and the construction of two mixed-use buildings, one multi-family building, and two subterranean parking structures. The proposed Project is within a portion of the existing ROW DTLA site (the "Project Site"), which comprises three parcels that measure approximately 30.65 acres. Ground disturbances for the Project would be limited to an approximately 4.8-acre portion of the Project Site referred to as the "Development Area." The Development Area consists of two areas, north and south of Center Street, on the west side of Alameda Street between 7th Street and Bay Street. Ground-disturbing activities for the Project include demolition of the existing surface parking lot and excavation to an average depth of 20 feet below grade for new subterranean parking structures within the northern and southern portions of the Development Area, as well as excavation to a depth of 28 feet below grade within discrete locations for elevator pits and associated footings. Because the potential for impacts to archaeological and tribal cultural resources is limited to those areas subject to ground-disturbing activities, this study primarily focuses on the Development Area.

The Project is subject to the California Environmental Quality Act (CEQA), and the City of Los Angeles (City) Department of City Planning (DCP) is the lead agency. The Los Angeles City Council certified the *Citywide Housing Element 2021-2029 and Safety Element Updates Final Environmental Impact Report* (Program EIR) (DCP 2021b). The proposed Project is within the scope of the Housing Element Program analyzed in the Program EIR, and the environmental clearance for the Project is being analyzed using the Housing Element CEQA Streamlining Checklist (Form CP-4089). The City adopted a Mitigation and Monitoring Program (MMP) for the Program EIR, which describes the procedures and stipulations for implementing mitigation measures to be imposed as conditions of approval by the City on discretionary projects. Mitigation Measures 4.4-2 and 4.15-1(a) of the MMP address archaeological resources and tribal cultural resources, respectively, and defines procedures to identify resources and implement applicable impact reduction techniques to reduce substantial adverse effects.

SWCA prepared this cultural resources assessment for the Project in compliance with Section A of Mitigation Measure 4.4-2 (Archaeological Resources) and Mitigation Measure 4.15-1(a) (Native American Consultation and Monitoring for Discretionary Projects) of the MMP. This report presents the results of a study conducted by a qualified archaeologist to determine if archaeological or tribal cultural resources are present within the Development Area, assess if resources are likely to be encountered within the Development Area, analyze the potential for the proposed Project to have significant impacts to archaeological and tribal cultural resources, and recommend mitigation measures to reduce impacts to less-than-significant levels to the extent feasible. The methods used in this study include a confidential records search of the California Historical Resources Information System (CHRIS), a Sacred Lands File (SLF) Search by the Native American Heritage Commission (NAHC), outreach to California Native American tribes, and research conducted by SWCA using archival and other materials. The information from these sources was used to assess if any new archaeological resources may be present within the Development Area. The impact analysis is based on the significance thresholds from the Environmental Checklist in Appendix G of CEQA Guidelines. The measures recommended herein are taken exclusively from the MMP for the Program EIR.

Dates of Investigation: The NAHC transmitted the results of their SLF search on January 19, 2024. The South Central Coastal Information Center (SCCIC) transmitted the results of their CHRIS search on February 8, 2024. Research and analysis for the Project was conducted by SWCA from January to December 2024. Notification letters were submitted to ten (10) California Native American tribes and delivered through the U.S. Postal Services via Certified Mail between July 21 and 25, 2025. Responses

were requested within two weeks of receipt. One response to the notification letters was received via email on July 28, 2025, and a reply sent on the same day, but no responses was received but the City was contacted by the Gabrieleño Band of Mission Indians-Kizh Nation. Between August and October 2025, the City correspondence with the Gabrieleño Band of Mission Indians-Kizh Nation via email and one conference call. As of November 4, 2025, no other responses to the notification letters have been received.

Summary of Findings: The SLF search was positive and in the response letter, the NAHC noted that the Gabrieleño Band of Mission Indians – Kizh Nation should be contacted for additional information regarding the results. The NAHC's response to SWCA's request included a list of 12 Native American contacts who may have knowledge of resources in or near the Development Area and recommended they be contacted. The Gabrieleño Band of Mission Indians – Kizh Nation received written notification of the Project on July 21, 2025. SWCA received a response to the letter via email on July 28, but no information pertaining specifically to the SLF results was provided. Through the email correspondence and conference call, the Gabrieleño Band of Mission Indians-Kizh Nation indicated they consider the Development Area to be sensitive and requested three measures. The measures include requirements for a Native American monitor during ground-disturbing activities (TCR-1), and protocols to follow in the event there is a discovery of a non-funerary/ceremonial tribal cultural resource (TCR-2) or human remains and funerary/ceremonial objects (TCR-3). No information was submitted by the Gabrieleño Band of Mission Indians-Kizh Nation that indicates there is a known tribal cultural resource in the Development Area, nor was any additional information submitted to support their sensitivity assessment.

The CHRIS records search was conducted for a 0.8-km (0.5-mile) radius surrounding the Development Area. There have been no archaeological resources or potential tribal cultural resources recorded within the Development Area. One historical archaeological site (CA-LAN-4660H) composed of mid- to late-nineteenth century components was identified 0.6 km (0.4 miles) to the northwest of the Development Area. SWCA noted five Native American archaeological sites (not previously assessed as tribal cultural resources) that have been recorded in the downtown Los Angeles area that were outside the CHRIS records boundary. SWCA also noted the presence of an industrial complex historically called the Los Angeles Union Wholesale Terminal, previously owned by the Southern Pacific Railroad (SPRR), which currently encompasses a total of eight buildings, including seven large industrial buildings that were constructed between 1917 and 1923 (collectively the "District"). The District is in the Project Site but the two paved surface parking lots within the Development Area were constructed in the 1980s and do not contribute to the District. The District was formally determined eligible for the National Register of Historic Places, making it automatically listed in the California Register of Historical Resources. The District is assessed for the current Project in a separate technical report prepared by Architectural Resources Group. There are no archaeological resources associated with the District and SWCA's CHRIS records search omitted non-archaeological resources.

Ethnographic sources described above have identified the Gabrielino village site of Yaanga as having been 2.25 km (1.4 miles) north of the Development Area. A second Gabrielino settlement known as Geveronga is described in ethnographic accounts as having been somewhere west of the Pueblo of Los Angeles. No physical traces of the Geveronga have ever been identified and the best approximation for its location is an area 44.46 km (2.8 miles) northwest of the Development Area. The location of the Development Area on the edge of the floodplain of the Los Angeles River and in reasonable proximity to a known Gabrielino settlement indicates that this area was more intensively used by Native Americans in the past compared to less intensively used areas within the traditional territory. More intensively used areas are more likely to produce physical evidence of those activities that can be preserved as archaeological deposits. The historical alterations documented within the Development Area have clearly reduced the likelihood that a Native American archaeological site may have once been present, but the potential for a buried site cannot be ruled out. Accordingly, SWCA finds the Development Area has

moderate sensitivity for Native American archaeological resources. This sensitivity is contained within alluvial sediments that are younger than 12,500 years in age. Sediments older than this are too old to contain Native American archaeological resources. The sensitivity for Native American archaeological resources is diminished within the fill sediments because of the historical land uses, but the sensitivity cannot be fully ruled out.

Historical land uses within the Development Area were assessed through archival research. During the nineteenth century, the Development Area was primarily used for agriculture. Two historical irrigation channels known as Zanja No. 2 and Zanja No. 3 are mapped near the Development Area, but archival sources indicate that neither of the zanjas passed directly through the Development Area. No buildings or structures were previously constructed within the Development Area during the nineteenth century. The agricultural activities are noteworthy in terms of the diminished potential for Native American archaeological sites, but the likelihood of substantial historical archaeological resources in the Development Area from before the 1900s is low. In the first decade of the twentieth century the Development Area was used for industrial purposes related to the Electric Railway Company and multiple buildings existed within the Development Area. However, by the 1920s, all these structures had been demolished and replaced with rail lines and a warehouse structure within the Development Area. The railroad tracks present within the Development Area were removed in the late 1970s and the industrial building present within the Development Area was demolished by the end of the 1980s. After these demolition events the Development Area was when the entire Development Area was converted into an at-grade parking lot.

The use of the Development Area as a rail yard for over 50 years suggests that if any physical materials are present within the Development Area, then they are likely associated with this land-use history. The paving of the Development Area may have preserved underlying deposits related to these activities, such as abandoned railroad ties, nails, and tracks, which are commonly found below ground in former industrial areas. Buildings materials, miscellaneous pieces of refuse including glass and metal food and beverage containers, and former building foundations are also common and could be present within the Development Area. Based on these findings, SWCA finds the Development Area has high sensitivity for containing historical archaeological resources. This sensitivity is contained within sediments designated as fill, which are estimated to extend from beneath the current pavement to as much as 5 feet below grade.

Impact Analysis: The Project requires the excavation and removal of fill and underlying alluvial sediments below the current grade. At a minimum, any sediments designated as fill within the Development Area have high sensitivity for archaeological resources. Specifically, there is a potential to encounter objects associated with industrial land uses beginning around 1900 throughout the Development Area. The potential for Native American archaeological resources is characterized as being moderate within alluvial sediments that are Holocene in age (deposited less than 12,500 years ago). If present, archaeological and tribal cultural resources in the Development Area could yield information important in prehistory or history and thereby satisfy Criterion 4 of the California Register of Historical Resources. Therefore, ground disturbances from the Project could cause a substantial adverse change in the significance of an archaeological resource and tribal cultural resource pursuant to California Code of Regulations Section 15064.5. Accordingly, SWCA finds that the Project could result in potentially significant impacts to archaeological and tribal cultural resources prior to mitigation.

Recommendations: Given the moderate to high sensitivity for archaeological and tribal cultural resources within the Development Area, SWCA recommends implementing a substitute measure for Section I of Mitigation Measure 4.4-2, Section J of Mitigation Measure 4.4-2, and a substitute measure for Mitigation Measure 4.15-1 to reduce impacts of the Project to a less than significant levels.

As written, Section I of Mitigation Measure 4.4-2 requires an archaeological monitor to be present during excavations and provide archaeological sensitivity training to construction personnel prior to initiating

construction. This will ensure any archaeological resources that may be present are identified by qualified monitors. The substitute measure for archaeological resources maintains the same requirements in Section I of Mitigation Measure 4.4-2 but adds a provision that requires the qualified archaeologist to prepare a Monitoring Plan, the scope of which is extended to address both archaeological and tribal cultural resources because the mitigation measures for each type of resource require equivalent actions to be taken and a Monitoring Plan that addresses both types of resources together will help to ensure consistency during implementation of the mitigation measures. The potential for impacts to an archaeological or tribal cultural resource is the same if the mitigation measures are implemented according to the Monitoring Plan. Thus, substituting Section I of Mitigation Measure 4.4-2 is more effective and will not cause a new significant impact.

Section J describes a procedure to follow if an archaeological resource is identified during construction. No other portions of Mitigation Measure 4.4-2 are recommended to reduce potentially significant impacts.

Mitigation Measure 4.15-1(b) outlines a process to be followed in the event a potential tribal cultural resource is discovered and includes the following requirements: temporarily halt work within a radius of 50 feet until the discovery can be assessed by a Qualified Archaeologist and affiliated tribes; retain a tribal monitor if a tribal cultural resource is identified; identify appropriate treatment consistent with existing regulations and in consultation with affiliated tribes; observe confidentiality requirements concerning the discovered resource, and; allow for adequate documentation of scientific information when applicable. The substitute measure for tribal cultural resources (TRC-MM-1) includes provisions that satisfy the same minimum requirements in Mitigation Measure 4.15-1(b) but adds requirements for worker training and tribal monitoring in areas with sensitivity for tribal cultural resources. The substitute measure includes elements of the three measures requested by the Gabrieleño Band of Mission Indians—Kizh Nation, specifically the elements stipulating the requirements for and methods used by a tribal monitor during ground-disturbing activities. The other elements of the measures requested by the Gabrieleño Band of Mission Indians—Kizh Nation are addressed in the other provisions of the substitute measure based on the minimum requirements incorporated from Mitigation Measure 4.15-1(b), such as requirements for tribal consultation while assessing potential tribal cultural resources and identifying appropriate forms of treatment for confirmed resources. The substitute measure also incorporates additional details to clarify the performance standards and ensure compliance with existing regulations, conformance with industry standards and best practices, and compatibility with other mitigation measures for the Project, specifically those for archaeological resources. By maintaining the same minimum requirements in Mitigation Measure 4.15-1(b) and adding requirement to conduct tribal monitoring, consistent with the sensitivity assessment and measures requested by the Gabrieleño Band of Mission Indians—Kizh Nation, the substitute mitigation measure TCR-MM-1 is more effective and will not cause a new significant impact to tribal cultural resources.

Implementation of these measures would reduce potentially significant impacts to archaeological and tribal cultural resources to less-than-significant levels.

Disposition of Data: This report will be submitted to the Project Applicant and DCP, and then filed with the SCCIC at California State University, Fullerton to be included in the CHRIS. All research materials and copies of the report will be retained on file at SWCA's office in Pasadena, California.

INTRODUCTION

SWCA Environmental Consultants (SWCA) prepared this cultural resources assessment for the proposed ROW DTLA Residential Project (the Project) in an industrial area east of the downtown area of Los Angeles, California. The Project proposes the demolition of existing surface parking lots and the construction of two mixed-use buildings, one multi-family building, and two subterranean parking structures. The proposed Project is within a portion of the existing ROW DTLA site (the "Project Site"), which comprises three parcels that measure approximately 30.65 acres. Ground disturbances for the Project would be limited to an approximately 4.8-acre portion of the Project Site referred to as the "Development Area." The Development Area consists of two areas, north and south of Center Street, on the west side of Alameda Street between 7th Street and Bay Street. Ground-disturbing activities for the Project include demolition of the existing surface parking lot and excavation for new subterranean parking structures and elevator pits within the northern and southern portions of the Development Area. Because the potential for impacts to archaeological resources is limited to those areas subject to ground-disturbing activities, this study primarily focuses on the Development Area. The analysis of historical resources was conducted by Architectural Resources Group (ARG) and presented in a separate technical report (ARG 2024).

The Project is subject to the California Environmental Quality Act (CEQA), and the City of Los Angeles (City) Department of City Planning (DCP) is the lead agency. The Los Angeles City Council certified the *Citywide Housing Element 2021-2029 and Safety Element Updates Final Environmental Impact Report* (Program EIR) (DCP 2021b). The proposed Project is within the scope of the Housing Element Program analyzed in the Program EIR, and the environmental clearance for the Project is being analyzed using the Housing Element CEQA Streamlining Checklist (Form CP-4089). The City adopted a Mitigation and Monitoring Program (MMP) for the Program EIR, which describes the procedures and stipulations for implementing mitigation measures to be imposed as conditions of approval by the City on discretionary projects. Mitigation Measure 4.4-2 of the MMP and 4.15-1(a) of the MMP address archaeological resources and tribal cultural resources, respectively, and defines procedures to identify resources and implement applicable impact reduction techniques to reduce substantial adverse effects.

SWCA prepared this cultural resources assessment for the Project in compliance with Section A of Mitigation Measure 4.4-2 (Archaeological Resources) and Measure 4.15-1(a) (Native American Consultation and Monitoring for Discretionary Projects) of the MMP.[1] This report presents the results of a study conducted by a qualified archaeologist to determine if archaeological and tribal cultural resources are present within the Development Area, assess if resources are likely to be encountered within the Development Area, analyze the potential for the proposed Project to have significant impacts, and recommend mitigation measures to reduce impacts to less-than-significant levels to the extent feasible. The methods used in this study include a confidential records search of the California Historical Resources Information System (CHRIS), a Sacred Lands File (SLF) Search by the Native American Heritage Commission (NAHC), outreach to California Native American tribes, and research conducted by SWCA using archival and other materials. The information from these sources was used to assess if any new archaeological and tribal cultural resources may be present within the Development Area. The impact analysis is based on the significance thresholds from the Environmental Checklist in Appendix G of CEQA Guidelines. The measures recommended herein are taken exclusively from the MMP for the Program EIR.

[1] Sections A and I of Mitigation Measure 4.4-2 and Mitigation Measure 4.15-1 refer to a *cultural* resources assessment as the type of technical study prepared to analyze archaeological and tribal cultural resources. Under the Environmental Checklist in Appendix G of CEQA Guidelines, impacts to cultural resources are analyzed under three separate categories—historical resources, archaeological resources, and human remains. This scope of this study is limited to analysis of archaeological and tribal cultural resources and excludes analysis of historical resources or human remains. The naming convention of "cultural resources assessment" is retained here for consistency with the terminology used in the Program EIR MMP.

This report was prepared by SWCA Senior Archaeologist Chris Millington, M.A., Registered Professional Archaeologist, and Archaeologist Erica Nicolay, M.A. Chris Millington acted as the Principal Investigator, and he meets the Secretary of the Interior's Professional Qualification Standard (PQS) in archeology. A final draft of this report will be submitted to the South Central Coastal Information Center (SCCIC), located at California State University, Fullerton, to be included in the CHRIS. Research materials and copies of the report will be retained on file with SWCA's office in Pasadena, California.

PROJECT LOCATION AND DESCRIPTION

The Project involves the demolition of existing surface parking lots and the construction of two mixed-use buildings and one multi-family building in a 4.8-acre portion (the Development Area) of an approximately 30.65-acre Project Site known as ROW DTLA. The Project Site is in an expansive industrialized area in the east of Downtown Los Angeles (Figure 1). The Project Site and Development Area are in Sections 33 and 34 of Township 1 South, Range 13 West, and Sections 3 and 4 of Township 2 South, Range 13 West, which is plotted on the U.S. Geological Survey (USGS) Los Angeles, California, quadrangle (Figure 2). The Project Site occupies an area that is bound by East 7th Street to the north, South Central Avenue to the west, South Alameda Street to the east, and East Olympic Boulevard to the south (Figure 3). The Project Site comprises three irregularly shaped parcels that are associated with the following addresses: 757–787 South Alameda Street, 1318–1396 East 7th Street, 736–796 South Central Avenue, 1301–1327 East 8th Street, 700–760 South Market Court, 720–746 South Terminal Street, and 760 South Warehouse Street.

The area surrounding the Project Site is primarily developed with warehouses, cold storage facilities, small-scale manufacturing operations, and other industrial uses, though in more recent years newer commercial office, commercial retail, and residential uses have been developed in the vicinity of the Project Site. The portion of the Project Site along Central Avenue is used as a wholesale produce market and an outdoor weekend market known as Smorgasburg. Except for 747 South Alameda Street, which is currently vacant, the middle portion of the Site between 7th and 8th Street supports retailers and restaurants and another office and hybrid office/light manufacturing tenants that span multiple industries including technology, apparel, construction, produce wholesale and consumer goods. This area also includes a ten-story concrete parking structure that was built in 2016 and is accessed via South Alameda Street. These existing uses will remain and are not being modified by the Project.

The Project proposes to construct three eight-story new construction buildings, including residential units, parking, and retail and cafe space. The three new buildings—Buildings A, B, and C—would be located just north and south of Center Street, which runs east-west through the Project Site (Figure 4). Buildings A and B would be south of Center Street and Building C would be north of Center Street. Building A would include commercial space at the first floor, residential units at the first through eighth floors, and two levels of subterranean parking. Building B would include residential units at the first through eight floors and two levels of subterranean parking. Building C would consist of commercial space at the first floor, residential units at the first through eighth floors, and two levels of subterranean parking. All three buildings would be surrounded by landscaping.

Figure 1. Project vicinity map.

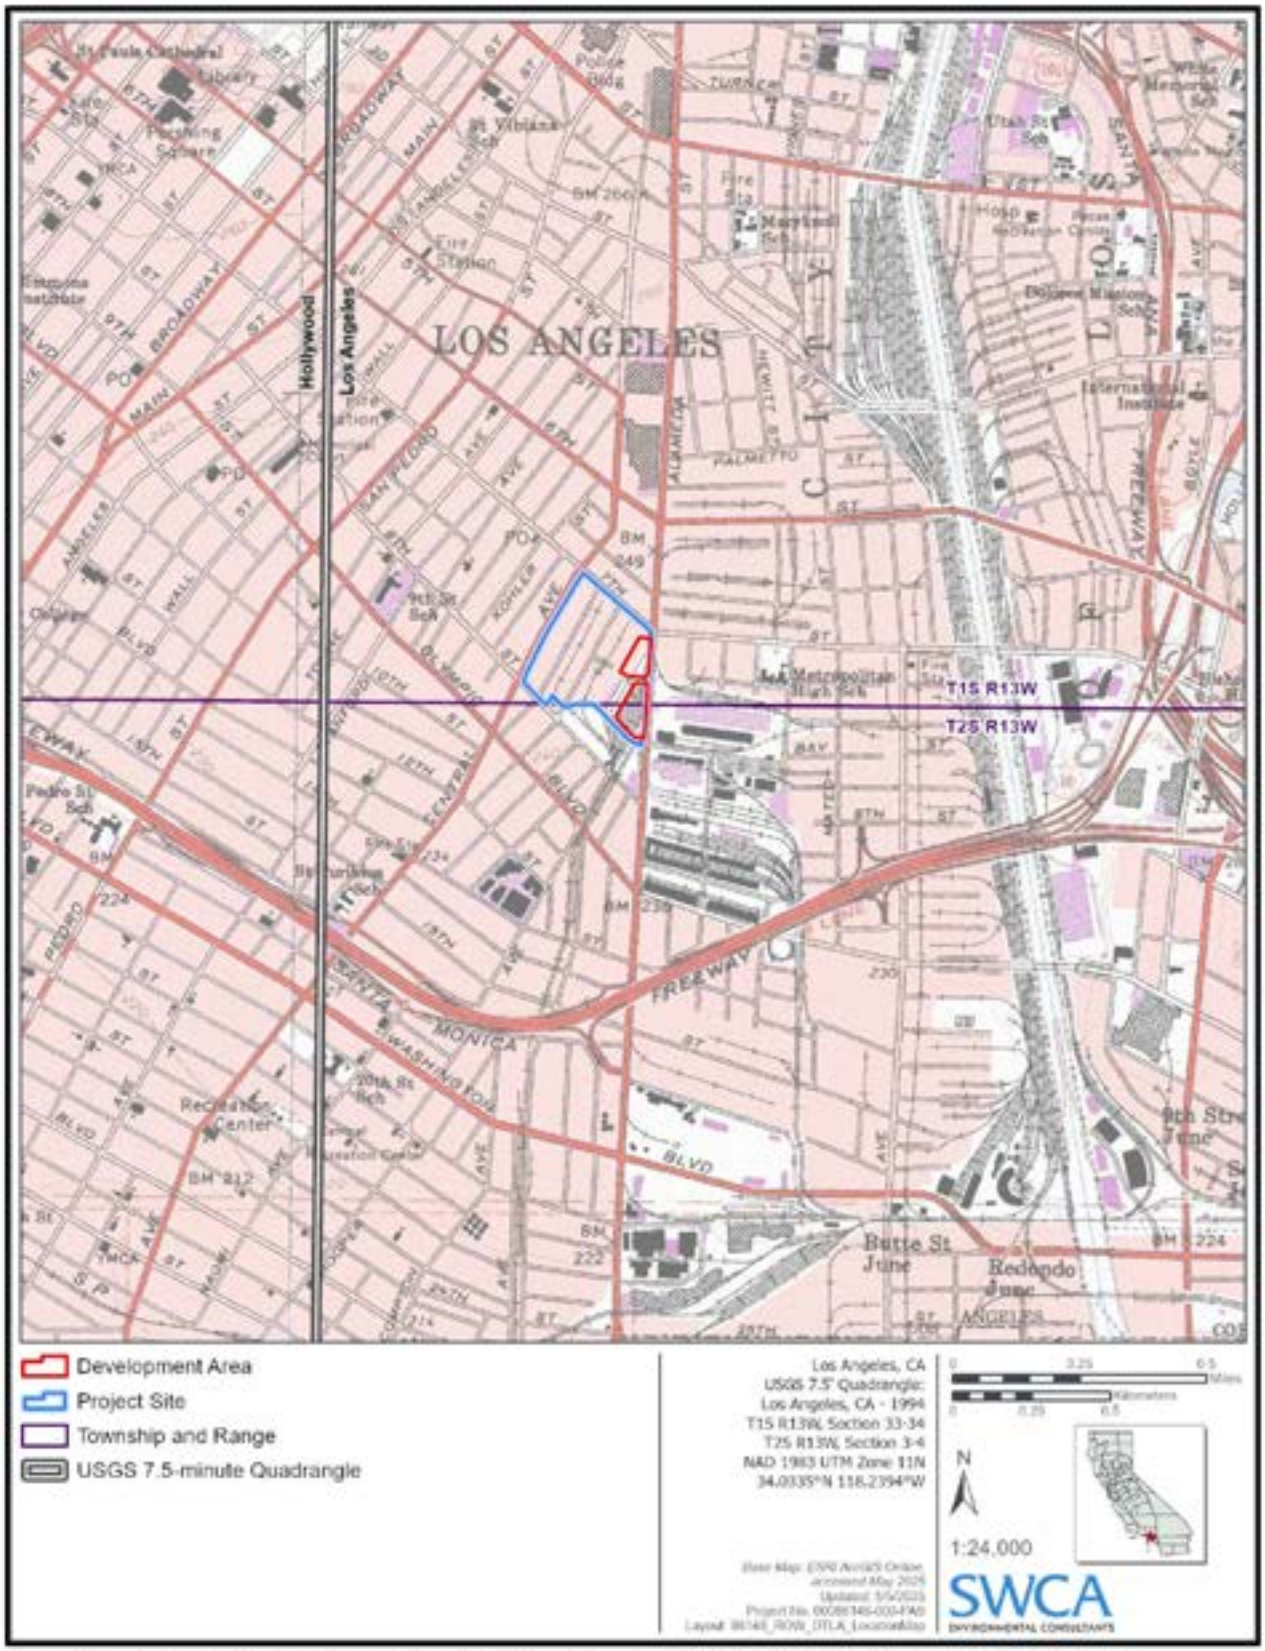

Figure 2. Project location plotted on USGS 7.5-minute quadrangle, Los Angeles, California.

Figure 3. Development Area (red outline) within the larger Project Site (blue outline) plotted on a 2023 aerial photograph.

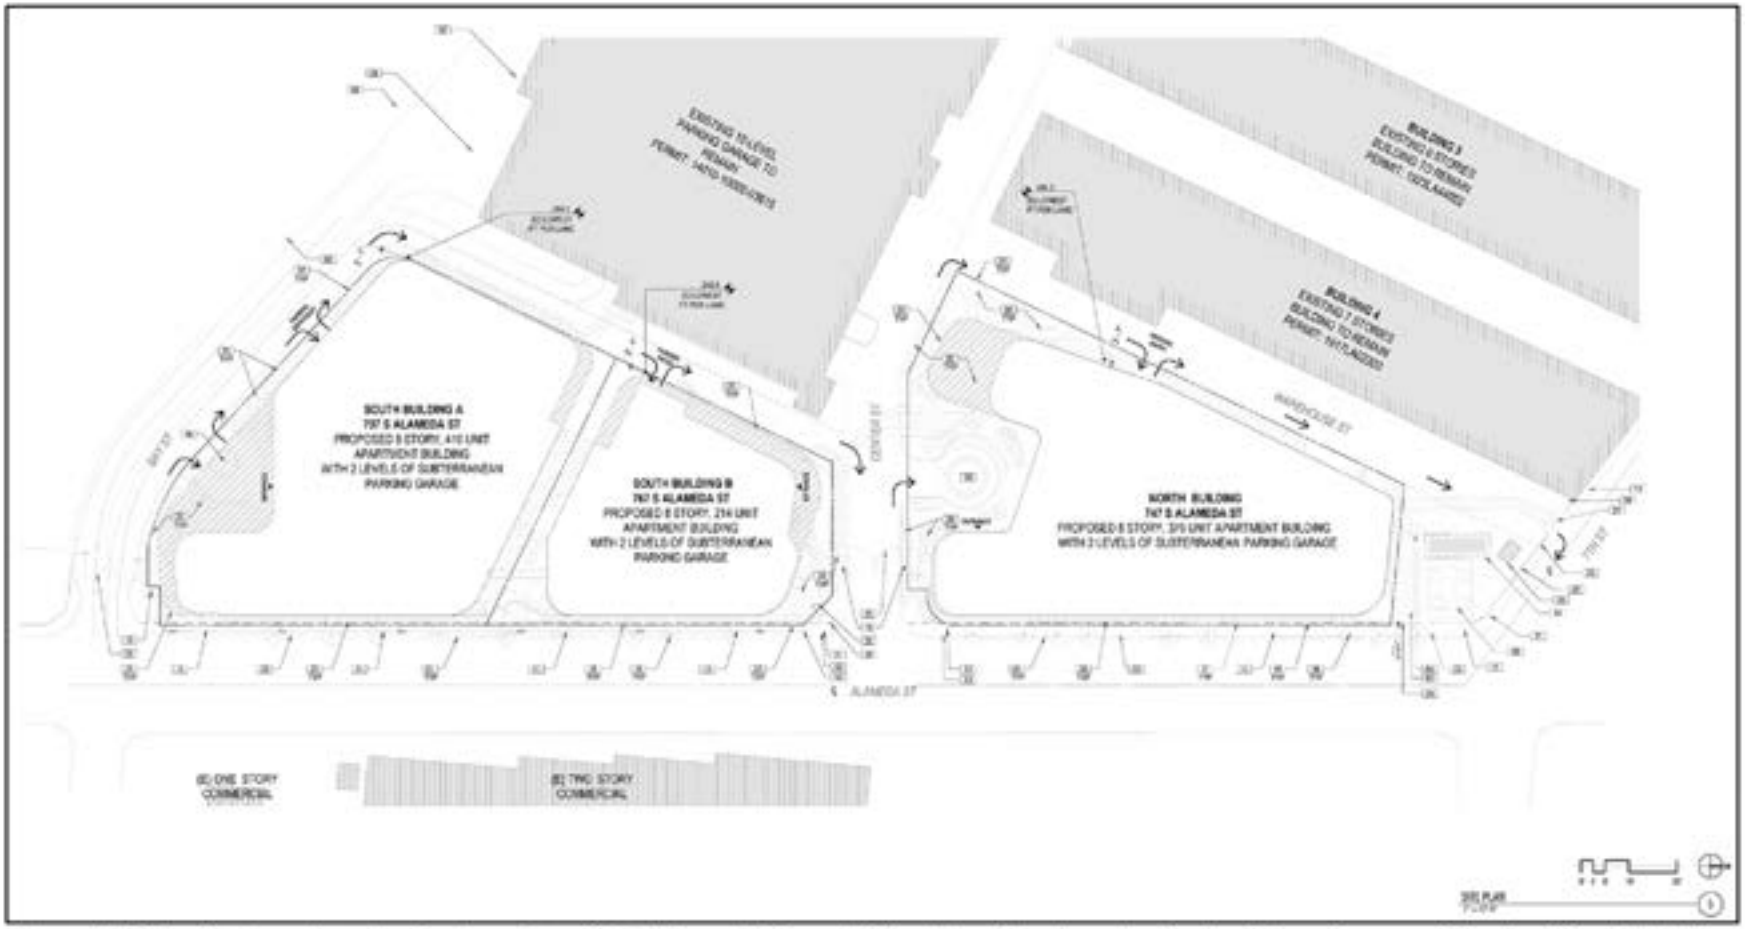

Figure 4. Project plans showing the location of Buildings A, B, and C (bold outlines) and extant buildings to remain in the Site (shaded). Note that the right side faces north and Alameda Street runs along the bottom of the frame and Bay Street on the left.

Ground disturbances required for the Project would occur during demolition of the existing surface parking lot and excavation for the subterranean parking and elevator pits with associated footings. These activities would be limited to a 4.8-acre area within the Project Site that is designated here as the Development Area (see Figure 3 and Figure 4) and is located at 747–787 South Alameda Street, 1390–1396 East 7th Street, Los Angeles, California, 90021. The Development Area consists of two irregularly shaped areas and is currently developed with paved surface parking and limited ornamental vegetation. The average estimated depth of excavation to construct the two levels of subterranean parking beneath Buildings A-B and Building C is 20 feet below grade. The excavation to the respective depths would occur across the full extent of the Project Site in the two areas. Additional excavation to a depth of approximately 28 feet below-grade would be conducted under the elevator pit and associated footings.

REGULATORY SETTING

State Regulations

The California Office of Historic Preservation (OHP), a division of the California Department of Parks and Recreation, performs certain duties described in the California Public resources Code (PRC) and maintains the California Historic Resources Inventory and California Register of Historical Resources (CRHR). The state-level regulatory framework also includes CEQA, which requires the identification and, if necessary, mitigation of substantial adverse impacts that may affect the significance of historical resources and archaeological resources. Under CEQA Guidelines (Title 14, Division 6, Chapter 3 of California Code of Regulations [CCR]), archaeological resources are analyzed as a type of cultural resource, and a significant archaeological resource is a historical resource.

California Environmental Quality Act

Under CEQA, a "project that may cause a substantial adverse change in the significance of a historical resource is a project that may have a significant effect on the environment" (PRC Section 21084.1). Analyzing the potential for impacts to a historical resource requires first determining if the proposed project involves a historical resource. If cultural resources are present, then the proposed project must be analyzed for a potential "substantial adverse change in the significance" of the resource.

HISTORICAL RESOURCES

According to CEQA Guidelines Section (CCR Section 15064.5), for the purposes of CEQA, historical resources are:

- A resource listed in, or formally determined to be eligible by the State Historical Resources Commission, for listing in the CRHR (PRC 5024.1, 14 CCR 4850 et seq.).
- A resource included in a local register of historical resources, as defined in PRC Section 5020.1(k), or identified as significant in a historic resources survey by meeting the requirements of PRC Section 5024.1(g).
- Any object, building, structure, site, area, place, record, or manuscript that the lead agency determines to be eligible for national, state, or local landmark listing; generally, a resource shall be considered by the lead agency to be historically significant (and therefore a historic resource under CEQA) if the resource meets the criteria for listing on the CRHR (as defined in PRC Section 5024.1, 14 CCR 4852).

Resources nominated to the CRHR must retain enough of their historic character or appearance to convey the reasons for their significance. Resources whose historic integrity (as defined above) does not meet National Register of Historic Places (NRHP) criteria may still be eligible for the CRHR.

According to CEQA, the fact that a resource is not listed in or determined eligible for the CRHR or is not included in a local register or survey, shall not preclude the lead agency from determining that the resource may be a historical resource (PRC Section 5024.1). Pursuant to CEQA, a project with an effect that may cause a substantial adverse change in the significance of a historical resource may have a significant effect on the environment (CEQA Guidelines, Section 15064.5[b]).

Substantial Adverse Change and Indirect Impacts to Historical Resources

CEQA Guidelines specify that a "substantial adverse change in the significance of an historical resource means physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired" (CEQA Guidelines, Section 15064.5). Material impairment occurs when a project alters in an adverse manner or demolishes "those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion" or eligibility for the NRHP, CRHR, or local register. In addition, pursuant to CEQA Guidelines Section 15126.2, the "direct and indirect significant effects of the project on the environment shall be clearly identified and described, giving due consideration to both the short-term and long-term effects."

UNIQUE ARCHAEOLOGICAL RESOURCES

In terms of archaeological resources, PRC Section 21083.2(g) defines a unique archaeological resource as an archaeological artifact, object, or site about which it can be clearly demonstrated that without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

1. Contains information needed to answer important scientific research questions, and that there is a demonstrable public interest in that information.
2. Has a special and particular quality, such as being the oldest of its type or the best available example of its type.
3. Is directly associated with a scientifically recognized important prehistoric or historic event or person.

TRIBAL CULTURAL RESOURCES

Assembly Bill 52

Assembly Bill (AB) 52 went into effect on January 1, 2015. The bill amended PRC 5097.94 and added PRC 21073, 21074, 21080.3.1, 21080.3.2, 21082.3, 21083.09, 21084.2, and 21084.3. PRC 21074(a) provides an initial set of criteria that define a tribal cultural resource as including but not limited to any of the following:

1. Sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are either of the following:
   Included or determined to be eligible for inclusion in the California Register of Historical Resources (CRHR).
   Included in a local register of historical resources as defined in subdivision (k) of PRC 5020.1.

2. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of PRC 5024.1. In applying the criteria set forth in subdivision (c) of PRC 5024.1 for the purposes of this paragraph, the lead agency shall consider the significance of the resource to a California Native American tribe.

Subdivision (b) of PRC 21074 adds that a tribal cultural resource may also be a cultural landscape provided it meets the criteria of subdivision (a), so long as the landscape is geographically defined in size and scope. Subdivision (c) of PRC 21074 clarifies that so long as the criteria in subdivision (a) are satisfied, the status as a unique or non-unique archaeological resource is not factored into the determination of whether a resource is a tribal cultural resource.

Section 1(a)(9) of AB 52 establishes that "a substantial adverse change to a tribal cultural resource has a significant effect on the environment," such that effects on tribal cultural resources need to be considered under CEQA. Section 6 of AB 52 adds PRC 21080.3.2, which states that parties may propose mitigation measures "capable of avoiding or substantially lessening potential significant impacts to a tribal cultural resource or alternatives that would avoid significant impacts to a tribal cultural resource."

CALIFORNIA REGISTER OF HISTORICAL RESOURCES

Created in 1992 and implemented in 1998, the CRHR is "an authoritative guide in California to be used by state and local agencies, private groups, and citizens to identify the state's historical resources and to indicate what properties are to be protected, to the extent prudent and feasible, from substantial adverse change" (PRC Sections 21083.2 and 21084.1). Certain properties, including those listed in or formally determined eligible for listing in the NRHP and California Historical Landmarks numbered 770 and higher, are automatically included in the CRHR. Other properties recognized under the California Points of Historical Interest program, identified as significant in historical resources surveys, or designated by local landmarks programs, may be nominated for inclusion in the CRHR. According to PRC Section 5024.1(c), a resource, either an individual property or a contributor to a historic district, may be listed in the CRHR if the State Historical Resources Commission determines that it meets one or more of the following criteria, which are modeled on NRHP criteria:

- **Criterion 1:** It is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
- **Criterion 2:** It is associated with the lives of persons important in our past.
- **Criterion 3:** It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
- **Criterion 4:** It has yielded, or may be likely to yield, information important in history or prehistory.

Resources nominated to the CRHR must retain enough of their historic character or appearance to convey the reasons for their significance. Resources whose historic integrity does not meet NRHP criteria may still be eligible for listing in the CRHR. Although all sites are evaluated according to all four of the CRHR criteria, the eligibility for archaeological resources is typically considered under Criterion 4. Most prehistoric archaeological sites lack identifiable or important association with specific persons or events of regional or national history (Criteria 1 and 2), and/or lack the formal and structural attributes necessary to qualify as eligible under Criterion 3.

An archaeological site may be considered significant if it displays one or more of the following attributes: chronologically diagnostic, functionally diagnostic, or exotic artifacts; datable materials; definable

activity areas; multiple components; faunal or floral remains; archaeological or architectural features; notable complexity, size, integrity, time span, or depth; or stratified deposits. Determining the period(s) of occupation at a site provides a context for the types of activities undertaken and may well supply a link with other sites and cultural processes in the region. Further, well-defined temporal parameters can help illuminate processes of culture change and continuity in relation to natural environmental factors and interactions with other cultural groups. Finally, precise dating for an archaeological site can provide a link to regionally important research questions and a finding of eligibility under Criterion 4 (information potential). A site that cannot be dated is unlikely to possess the quality of significance required for CRHR eligibility or be considered a unique archaeological resource. The content of an archaeological site provides information regarding its cultural affiliations, temporal periods of use, functionality, and other aspects of its occupation history. The range and variability of artifacts present in the site can allow for reconstruction of changes in ethnic affiliation, diet, social structure, economics, technology, industrial change, and other aspects of culture.

Local Regulations

Los Angeles Historic-Cultural Monuments

Local landmarks in the City are known as Historic-Cultural Monuments (HCMs) and are under the aegis of DCP's Office of Historic Resources (OHR). Originally adopted in 1962, and most recently amended in 2018, the City's Cultural Heritage Ordinance establishes the criteria and process for designating HCMs as follows:

> [A] Historic-Cultural Monument (Monument) is any site (including significant trees or other plant life located on the site), building or structure of particular historic or cultural significance to the City of Los Angeles, including historic structures or sites in which the broad cultural, economic or social history of the nation, State or community is reflected or exemplified; or which is identified with historic personages or with important events in the main currents of national, State or local history; or which embodies the distinguishing characteristics of an architectural type specimen, inherently valuable for a study of a period, style or method of construction; or a notable work of a master builder, designer, or architect whose individual genius influenced his or her age. (City of Los Angeles Municipal Code Section 22.171.7)

The list of HCMs consists primarily of non-archaeological resources, but the criteria do not explicitly prohibit archaeological sites from being designated. There are currently two sites associated with Gabrielino settlements designated as HCMs (Nos. 112 and 490) that were originally identified from archaeological discoveries.

City of Los Angeles General Plan

CONSERVATION ELEMENT

Chapter II, Section 3 of the *Conservation Element of the City of Los Angeles General Plan* (Conservation Element) (DCP 2001), defers to the CEQA Guidelines in regard to the identification, evaluation, and mitigation of impacts to archaeological resources. The Conservation Element recognizes that the City has the primary responsibility to protect significant archaeological resources and states the following:

> If it is determined that a development project may disrupt or damage such a site, the project is required to provide mitigation measures to protect the site or enable study and

> documentation of the site, including funding of the study by the applicant. The city's environmental guidelines require the applicant to secure services of a bona fide archaeologist to monitor excavations or other subsurface activities associated with a development project in which all or a portion is deemed to be of archaeological significance. Discovery of archaeological materials may temporarily halt the project until the site has been assessed, potential impacts evaluated and, if deemed appropriate, the resources protected, documented and/or removed. (DCP 2001:II-4)

The Conservation Element gives the following objective and policy for archaeological and paleontological resources:

Objective: protect the city's archaeological and paleontological resources for historical, cultural, research and/or educational purposes.

Policy: continue to identify and protect significant archaeological and paleontological sites and/or resources known to exist or that are identified during land development, demolition or property modification activities.

CITYWIDE HOUSING ELEMENT 2021–2029

The Housing Element of the City's General Plan identifies Los Angeles's housing needs and opportunities and establishes clear goals and objectives to inform future housing decisions. The Housing Element Update was adopted by the City Council on November 24, 2021 (DCP 2021c). An environmental review for the Housing Element Update was completed pursuant to CEQA in conjunction with the Safety Element Update and targeted updates Health Element. A Draft Environmental Impact Report (EIR) was prepared and after incorporating input received during public scoping meetings and circulation, a revised draft was released in October 2021 and approved by the City Planning Commission (CPC) (DCP 2021a).

The *Citywide Housing Element 2021–2029 and Safety Element Updates Final Environmental Impact Report* (Program EIR) (DCP 2021b) was adopted and certified on October 29, 2021. The Program EIR included an MMP, which describes the procedures for implementing the mitigation measures put forward in the Draft EIR. The mitigation measures are included as conditions of approval on future discretionary projects, subject to the City's authority.

Using CEQA Guidelines Section 15168, subsequent projects may use the Program EIR as their environmental clearance if the project can be shown to be within the scope of the program addressed in the Program EIR, and its environmental effects are within the scope of environmental impacts analyzed in the Program EIR. Most projects involving new housing within the City are within the scope of the Housing Element Program and can use the Housing Element CEQA Streamlining Checklist for environmental clearance. For those housing projects found not to be within the scope of the impacts analyzed in the Program EIR, the Program EIR can be used to clear those impacts that were analyzed in the EIR and a tiered clearance, such as a mitigated negative declaration or focused EIR, can be used to clear those impacts that are not within the scope of the Program EIR.

The mitigation measures in the MMP for the Housing Element Update include the following provisions that apply to archaeological and tribal cultural resources (DCP 2021b:5-26–5-30, 5-51–5-53).

Archaeological Resources

4.4-2 Archaeological Resources

Discretionary projects that involve ground disturbance in native soils or soils of unknown origin, shall implement the following procedures to identify archaeological resources located in a development site and implement applicable impact reduction techniques to reduce substantial adverse effects associated with the inadvertent discovery of archaeological resources.

A. The project applicant shall retain a qualified archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards (PQS) in archaeology to complete a cultural resources assessment of the development site. A cultural resources assessment may include an archaeological pedestrian survey of the development site, if possible, and sufficient background archival research and field sampling to determine whether subsurface prehistoric or historic remains may be present. Archival research should include a records search conducted at the South Central Coastal Information Center (SCCIC) and a Sacred Lands File (SLF) search conducted with the Native American Heritage Commission (NAHC).

B. If prehistoric or historic archaeological remains are identified as a result of the SCCIC or SLF searches, the remains shall be avoided and preserved in place where feasible.

C. Where preservation is not feasible, each resource shall be evaluated for significance and eligibility to the California Register. Phase 2 evaluation shall include any necessary archival research to identify significant historical associations as well as mapping of surface artifacts, collection of functionally or temporally diagnostic tools and debris, and excavation of a sample of the cultural deposit to characterize the nature of the sites, define the artifact and feature contents, determine horizontal boundaries and depth below surface, and retrieve representative samples of artifacts and other remains.

D. Excavation at Native American sites shall be monitored by a geographically affiliated tribal representative, as agreed upon in any formal consultation proceedings with the geographically affiliated tribe or as indicated by the NAHC. If no tribal monitor is available, the monitoring shall be done by a qualified archaeologist.

E. Cultural materials collected from the sites shall be processed and analyzed in the laboratory according to standard archaeological procedures. The age of the remains shall be determined using radiocarbon dating and other appropriate procedures; lithic artifacts, faunal remains, and other cultural materials shall be identified and analyzed according to current professional standards.

F. Following laboratory analysis, the significance of the sites shall be evaluated according to the criteria of the California Register. The results of the investigations shall be presented in a technical report following the standards of the California Office of Historic Preservation (OHP) publication "Archaeological Resource Management Reports: Recommended Content and Format (1990 or latest edition)" (http://ohp.parks.ca.gov/pages/1054/files/armr.pdf).

G. Upon completion of the work, all artifacts, other cultural remains, records, photographs, and other documentation shall be curated by an appropriate curation facility. All fieldwork, analysis, report production, and curation shall be fully funded by the applicant.

H. If the resources meet California Register significance standards, the City shall ensure that all feasible recommendations for impact reduction of archaeological impacts are

incorporated into the final design and permits issued for development. Necessary Phase 3 data recovery excavation, conducted to exhaust the data potential of significant archaeological sites, shall be carried out by a qualified archaeologist meeting the Secretary of the Interior's PQS for archaeology according to a research design reviewed and approved by the City prepared in advance of fieldwork and using appropriate archaeological field and laboratory methods consistent with the OHP Planning Bulletin 5 (1991), Guidelines for Archaeological Research Design, or the latest edition thereof.

I. If recommended by a cultural resources assessment, prior to issuance of a grading permit and prior to the start of any ground-disturbing activity, the applicant shall retain a qualified archaeologist who meets the Secretary of the Interior's PQS to oversee an archaeological monitor who shall be present during construction excavations, such as demolition, clearing/grubbing, grading, trenching, or any other construction excavation activity associated with the project, including peripheral activities, such as sidewalk replacement, utilities work, and landscaping, which may occur adjacent to the project site. The frequency of monitoring shall be based on the rate of excavation and grading activities, the materials being excavated (younger sediments vs. older sediments), the depth of excavation, and, if found, the abundance and type of archaeological resources encountered. Full-time monitoring may be reduced to part-time inspections, or ceased entirely, if determined adequate by the qualified archaeologist. Prior to commencement of excavation activities, Archaeological Sensitivity Training shall be given for construction personnel. The training session shall be carried out by the qualified archaeologist and shall focus on how to identify archaeological resources that may be encountered during earthmoving activities and the procedures to be followed in such an event.

J. In the event that historic (e.g., bottles, foundations, refuse dumps/privies, railroads, etc.) or prehistoric (e.g., hearths, burials, stone tools, shell and faunal bone remains, etc.) archaeological resources are unearthed, ground-disturbing activities shall be halted or diverted away from the vicinity of the find so that the find can be evaluated. A 50-foot buffer within which construction activities shall not be allowed to continue shall be established by the qualified archaeologist around the find. Work shall be allowed to continue outside of the buffer area. All archaeological resources unearthed by project development activities shall be evaluated by the qualified archaeologist. If a resource is determined by the qualified archaeologist to constitute a "historical resource" pursuant to CEQA Guidelines Section 15064.5(a) or a "unique archaeological resource" pursuant to Public Resources Code Section 21083.2(g), the qualified archaeologist shall coordinate with the applicant and the City to develop a formal treatment plan that would serve to reduce impacts to the resources. The treatment plan established for the resources shall be in accordance with CEQA Guidelines Section 15064.5(f) for historical resources and Public Resources Code Sections 21083.2(b) for unique archaeological resources. Preservation in place (i.e., avoidance) is the preferred manner of treatment. If, in coordination with the City, it is determined that preservation in place is not feasible, appropriate treatment of the resource shall be developed by the qualified archaeologist in coordination with the City and may include implementation of archaeological data recovery excavations to remove the resource along with subsequent laboratory processing and analysis. Any archaeological material collected shall be curated at a public, non-profit institution with a research interest in the materials, if such an institution agrees to accept the material. If no institution accepts the archaeological material, they shall be donated to a local school, Tribe, or historical society in the area for educational purposes.

K. As applicable, the final Phase 1 Inventory, Phase 2 Testing and Evaluation, or Phase 3 Data Recovery reports shall be submitted to the City prior to issuance of construction permit. Recommendations contained therein shall be implemented throughout all ground disturbance activities.

Tribal Cultural Resources

4.15-1(a) Native American Consultation and Monitoring for Discretionary Projects

All discretionary projects that involve ground disturbing activities in previously undisturbed soils, shall prepare a cultural resources assessment and do a record search with a study area of no less than 0.5 mile around the project area. Projects conducted in culturally and historically sensitive areas, as determined by a Qualified Archaeologist meeting the Secretary of the Interior's Professional Qualification Standards for Archaeologist, should include a record search with a study area of no less than 1 mile around the project area.

Notification shall be provided to California Native American tribes that are traditionally and culturally affiliated with the geographic area of the project site and have submitted a written request to the Department of City Planning to be notified of proposed projects in that area. Should projects have potential to impact cultural resources, as determined during the environmental assessment or Tribal consultation, a Cultural Resources Monitoring Program (CRMP) shall be prepared by Qualified Archaeologist, in consultation with all interested Tribes, prior to the commencement of any and all ground disturbing activities for the Project, including any archaeological testing. The CRMP shall include compliance with 4.15-1(b) and will provide details regarding the process for infield treatment of inadvertent discoveries and the disposition of inadvertently discovered non-funerary resources and shall be consistent with the treatment of unique archaeological resources in PRC 21083.2.

4.15-1(b) Discovery of Potential Tribal Cultural Resources

In the event that Tribal Cultural Resources are discovered during Project activities, whether or not a tribal monitor is present, and there is no CRMP or the CRMP does not cover treatment of inadvertent discovery, all work within a 50-foot buffer of the find shall cease and a Qualified Archaeologist meeting the Secretary of the Interior's Professional Qualification Standards for Archaeology shall assess the find. Tribes that are culturally and historically affiliated with the Project area and have requested consultation shall be notified, should any potential tribal cultural resource be discovered during project implementation. Construction personnel shall not collect or move any tribal resources. Construction activity may continue unimpeded on other portions of the project site. Unless agreed otherwise during the tribal consultation process or in a CRMP, if tribal cultural resources are discovered during construction, the applicant and/or owner shall retain a Qualified Tribal Monitor (as approved by the Tribe) if requested by the Tribe. Any and all archaeological/cultural documents created as a part of the Project (isolate records, site records, survey reports, testing reports, and monitoring reports) should be provided to consulting Tribes. Any tribal cultural resources discovered shall be treated with appropriate dignity and protected and preserved as appropriate with the agreement of the Tribal Representative and in accordance with federal, state, and local guidelines. If not otherwise provided in the CRMP, the Lead Agency and/or applicant shall, in good faith, provide all consulting Tribes the opportunity to consult on the disposition and treatment of resources. The location of the find of tribal cultural resources and the type and nature of the find will not be published, except to provide information to the

Qualified Archaeologist, tribal representatives, and public agencies with jurisdiction or responsibilities related to the resources. An agreement will be reached with the Tribal Representative to mitigate or avoid any significant impacts to identified tribal cultural resources. Absent an agreement with the Tribal Representative, as provided in Public Resources Code Section 21083.2, the find should be preserved in place or left in an undisturbed state unless the Project would damage the resource. When preserving in place or leaving in an undisturbed state is not possible, excavation should not occur until testing or studies prepared by a Qualified Archaeologist have adequately documented the recovery of scientifically consequential information from and about the resource. Construction activity may continue unimpeded on other portions of the project site if cleared by the Qualified Tribal Monitor or Qualified Archaeologist. Ground Disturbance Activities in the area where resources were found may commence once the identified resources are properly assessed and processed by a Tribal Representative or, if no Tribal Representative is identified, a Qualified Archaeologist.

The measure shall be shown on plans.

METHODS

California Historical Resources Information System Records Search

Archaeological studies and resource records are managed in California as part of the CHRIS. Physical copies of reports and resource records and digital data are retained at multiple information centers that collectively manage the CHRIS for specific counties. Records for Los Angeles County are maintained by the SCCIC, which is located at California State University, Fullerton. Each information center also maintains the Archaeological Determinations of Eligibility list (OHR Directory of Historic Properties Data File), and has access to the NRHP, CRHR, California Points of Historical Interest, California Historical Landmarks, and California State Inventory of Historic Resources. A non-confidential CHRIS search conducted through an information center will identify the number of resources and reports for a specified area and a selected radius but omits any information that reveals the confidential location or contents of archaeological resources. A confidential CHRIS records search includes copies of all records and is made available only to authorized users who meet criteria defined by the California OHP.

Prior studies and resources are assigned unique identifiers in the CHRIS, and spatial data are recorded on paper maps and/or in a geographic information system (GIS). The identifiers for prior studies and resources incorporate codes specific to each county. The identifier assigned to all cultural resources is known as the primary number and is indicated by a letter prefix ("P") that includes a county code (Los Angeles County is 19) followed by a sequential six-digit number, e.g., P-19-000001. Cultural resources with archaeological components (i.e., archaeological resources) are given a second designation, referred to as a trinomial. The trinomial incorporates a state and county code ("CA-LAN" for Los Angeles County) followed by a number, which may be the same as the digit used in the primary number but could also vary. Archaeological resources that are exclusively historic in age are given an additional suffix, "H", e.g., CA-LAN-169H. Archaeological resources containing both prehistoric- and historic-era components are designated with the suffix "/H", e.g., CA-LAN-7/H. Archaeological resources that are exclusively prehistoric in age will not have either suffix. For this report, all archaeological sites will be referenced by their trinomial number, and for ease of reference the "CA-" prefix is excluded, e.g., CA-LAN-1 is referred to as LAN-1. Sites that are not assigned a trinomial are referenced here using their primary number.

For this study, SWCA requested a search of the CHRIS from the SCCIC that included any previously recorded archaeological resources and any cultural resource investigations within a 0.8 km (0.5-mile) radius of the Development Area. The CHRIS records search also included a review of the NRHP, the CRHR, California Points of Historical Interest list, the California Historical Landmarks list, the Archaeological Determinations of Eligibility list (OHR Directory of Historic Properties Data File), the City's HCM list, and the California State Inventory of Historic Resources. The results of the CHRIS search were summarized in a digital letter from the SCCIC dated February 8, 2024, which is provided in Appendix A, and attachments containing database records and confidential GIS data.

Sacred Lands File Search

The NAHC is charged with identifying, cataloging, and protecting Native American cultural resources, which includes ancient places of special religious or social significance to Native Americans, and known ancient graves and cemeteries of Native Americans on private and public lands in California. The NAHC's inventory of these resources is known as the SLF. In addition, the NAHC maintains a list of tribal contacts affiliated with various geographic regions of California. All outreach to tribe was conducted as part of the notification process conducted pursuant to MM 4.15-1(a) of the MMP from the Program EIR and is described below. The contents of the SLF are strictly confidential, and SLF search requests return positive or negative results in addition to a list of tribal contacts with affiliation to the specified location. A letter from the NAHC summarizing the results of the records search is provided in Appendix B.

Archival Research

Concurrent with the confidential CHRIS records search, SWCA reviewed property-specific historical and ethnographic context research to identify information relevant to the Development Area. Research focused on a variety of primary and secondary materials relating to the history and development of the Project Site and Development Area, including historical maps, aerial and ground photographs, ethnographic reports, and other environmental data. Archival research focused on assessing the general sequence of developments within the Development Area and vicinity beginning in the nineteenth century. Aerial photographs were used to help assess the setting of the Development Area from 1927 to the present.

Sources consulted included the following publicly accessible data sources: OHR (SurveyLA); David Rumsey Historical Map Collection; Early California Cultural Atlas (Native American villages and placenames [Hackel et al. 2015]); Huntington Library Digital Archives; Library of Congress, Los Angeles Public Library Map Collection; Los Angeles Public Library (maps and photographs); Sanborn Fire Insurance Company maps (Sanborn maps); USGS historical topographic maps; University of California, Santa Barbara Digital Library (aerial photographs); and University of Southern California Digital Library.

In addition to the above, SWCA reviewed the results of a geotechnical investigation conducted for the Project by Group Delta (Bueno and Tsai 2023). Group Delta reviewed past geotechnical investigations conducted near the Development Area, conducted limited subsurface boring, identified the sediments within the Development Area, and offered a preliminary assessment of the geophysical conditions.

Archaeological Sensitivity Analysis

SWCA assessed the potential for the presence of an unidentified resource in the form of a buried archaeological site, which includes tribal cultural resources that are archaeological in nature.[2] That determination considers historical use of the Development Area and vicinity broadly and the physical setting specifically, including an assessment of whether the setting is capable of containing buried archaeological material, and finally, characterizing the potential for a buried resource. Lacking any data specifically gathered to assess the presence or absence of archaeological material below the surface, the resulting sensitivity is by nature qualitative, ranging along a spectrum of increasing probability for encountering such material, designated here as low, moderate, and high.

SWCA assessed the sensitivity of the Development Area to contain Native American archaeological resources, as well as non-Native American (i.e., historical) archaeological resources. Specific factors are considered for each respective resource type. For Native American archaeological resources, a primary consideration is assessing whether an area provided favorable conditions for short term or seasonal habitation at various time intervals during the Terminal Pleistocene and Holocene. This is assessed by analyzing the following: proximity to natural features (e.g., perennial water source, plant or mineral resource, animal habitat) and other known Native American archaeological sites; topography and hydrology to assess whether the area provided relatively level ground and dry conditions; and viewshed to assess whether the location offered a prominent view for either practical or ceremonial purposes. These assessments rely on historical ecological reconstructions for vegetation, hydrology, topography, and paleoenvironmental data; therefore, the resulting sensitivity assessment may vary in its resolution over time and from region to region.

Assessing historical archaeological resource sensitivity relies more exclusively on archival research that indicates past land uses, as well as reports of archaeological discoveries, whether in public sources (e.g., newspapers, newsletters) or historical archaeological sites in the CHRIS records. Where soils data have been collected (e.g., during geotechnical sampling), the presence of common archaeological materials (e.g., bricks, glass, and/or building materials) in geotechnical bores may suggest an increased likelihood for a buried historical archaeological resource; the presence of a stratum designated as fill in the geotechnical testing may indicate the overall area in which such resources could be preserved below ground. For areas that were vacant during the nineteenth and/or twentieth centuries, land uses in areas directly adjacent or in reasonable proximity are also considered in terms of the types of activities and material remains that may have been deposited within the open space. Land use history is also considered in terms of its potential to destroy, displace, or otherwise diminish the potential for a buried archaeological resource of a previous time that may have once been present.

For purposes of the current study, high archaeological sensitivity is defined as any area with a favorable setting for Native American habitation or temporary use, documentation of historical occupation(s), soil conditions capable of preserving buried material, and little to no disturbances. Areas lacking these traits are considered to have low sensitivity. Areas with a combination of these traits are considered as having moderate sensitivity.

Outreach to California Native American Tribes

MM 4.15-1(a) of the MMP from the Program EIR includes a provision requiring the applicant of an individual project to provide notification to California Native American tribes who are traditionally and culturally affiliated with the geographic area of a given project site and have submitted a written request

[2] Hereafter, all references to Native American archaeological resources are assumed to also apply to tribal cultural resources that are archaeological in nature but will not be referenced as such.

to City Planning to be notified of a proposed project in that area. The notification is intended to provide information on the proposed project and request information concerning the presence of a tribal cultural resource or likelihood for a potential tribal cultural resource as a means of informing the analysis of the potential for impacts to a tribal cultural resource. The outreach process established under the Housing Element CEQA Streamlining Checklist is informational in nature and not intended as government-to-government consultation in the manner required for AB 52 tribal consultation. However, informational outreach pursuant to MM 4.15-1(a) was conducted based on the City's AB 52 consultation list (including tribal contact information provided by the NAHC, updated as of 10/24/2022), and any information provided by tribes is still subject to the confidentiality protections provided under PRC Section 21082.3(c).

SWCA sent written notification letters to 10 contacts representing nine (9) California Native American tribes. The notifications provided information on the Project and the environmental review process being undertaken through the City's Housing Element CEQA Streamlining process. The letters requested that any responses be received no more than 2 weeks after receipt of the letter. The notifications were printed and sent via certified mail through the U.S. Postal Service. An electronic copy of the letters was submitted to one contact via email because the written notification was returned as undeliverable. The notifications were mailed on July 18, 2025, and delivered July 21–25. The requested response period ended on August 8, 2025. Copies of the notification letter and certified mail receipts are included here in Appendix C. All confidential materials from the correspondence are included in Appendix D, which is excluded from publicly circulated drafts of this report.

ENVIRONMENTAL SETTING

The Development Area is in the northwestern portion of the Los Angeles Basin, a broad, level plain defined by the Pacific Ocean to the west, the Santa Monica Mountains and Puente Hills to the north, and the Santa Ana Mountains and San Joaquin Hills to the south. This extensive alluvial wash basin is filled with Quaternary alluvial sediments deposited as unconsolidated material eroded from the surrounding hills. Over millions of years, the basin has experienced episodes of subsidence, deposition, uplift, erosion, and faulting, all of which have resulted in very complex geology, as well as oil deposits and abundant fossils (Ingersoll and Rumelhart 1999; Lamar 1970; Yerkes et al. 1965). The surface of the basin slopes gently southwestward toward the ocean, interrupted in various places by low hills and traversed by several large rivers (Yerkes et al. 1965). The Development Area is situated in the former plain of the Los Angeles River. Topographically, the setting is characterized as an open aspect plain with a very gradual slope to the south. The Development Area is at an elevation of approximately 87.5 to 88.7 meters (m) (287–291 feet) above mean sea level. The Pacific Ocean shoreline is approximately 21.91 km (13.62 miles) to the west of the Development Area.

Geology and Soils

According to geologic mapping by Campbell and others (2014), Late Pleistocene young alluvium, Unit 2 (Qya_2) is present across the entire Development Area (Figure 5). The Late Pleistocene (or Terminal Pleistocene) marks the end of the last glacial period, which occurred around 11,000 to 12,000 years ago and transitioned into the comparatively warmer period known as the Holocene (Campbell et al. 2014). The Qya_2 unit consists of unconsolidated, generally friable, stream-deposited silt, sand, and gravel on flood plains, locally including related alluvial fans and streambeds. Although the area mapped by Campbell and colleagues as Qya_2 generally consists of sediments with similar physical characteristics and ages, there are smaller scale deposits of Holocene-aged deposits contained within the sedimentary unit. In at least one case, a piece of human bone dated to the Middle Holocene was identified beneath more than 20 feet of alluvium within the Qya_2 unit.

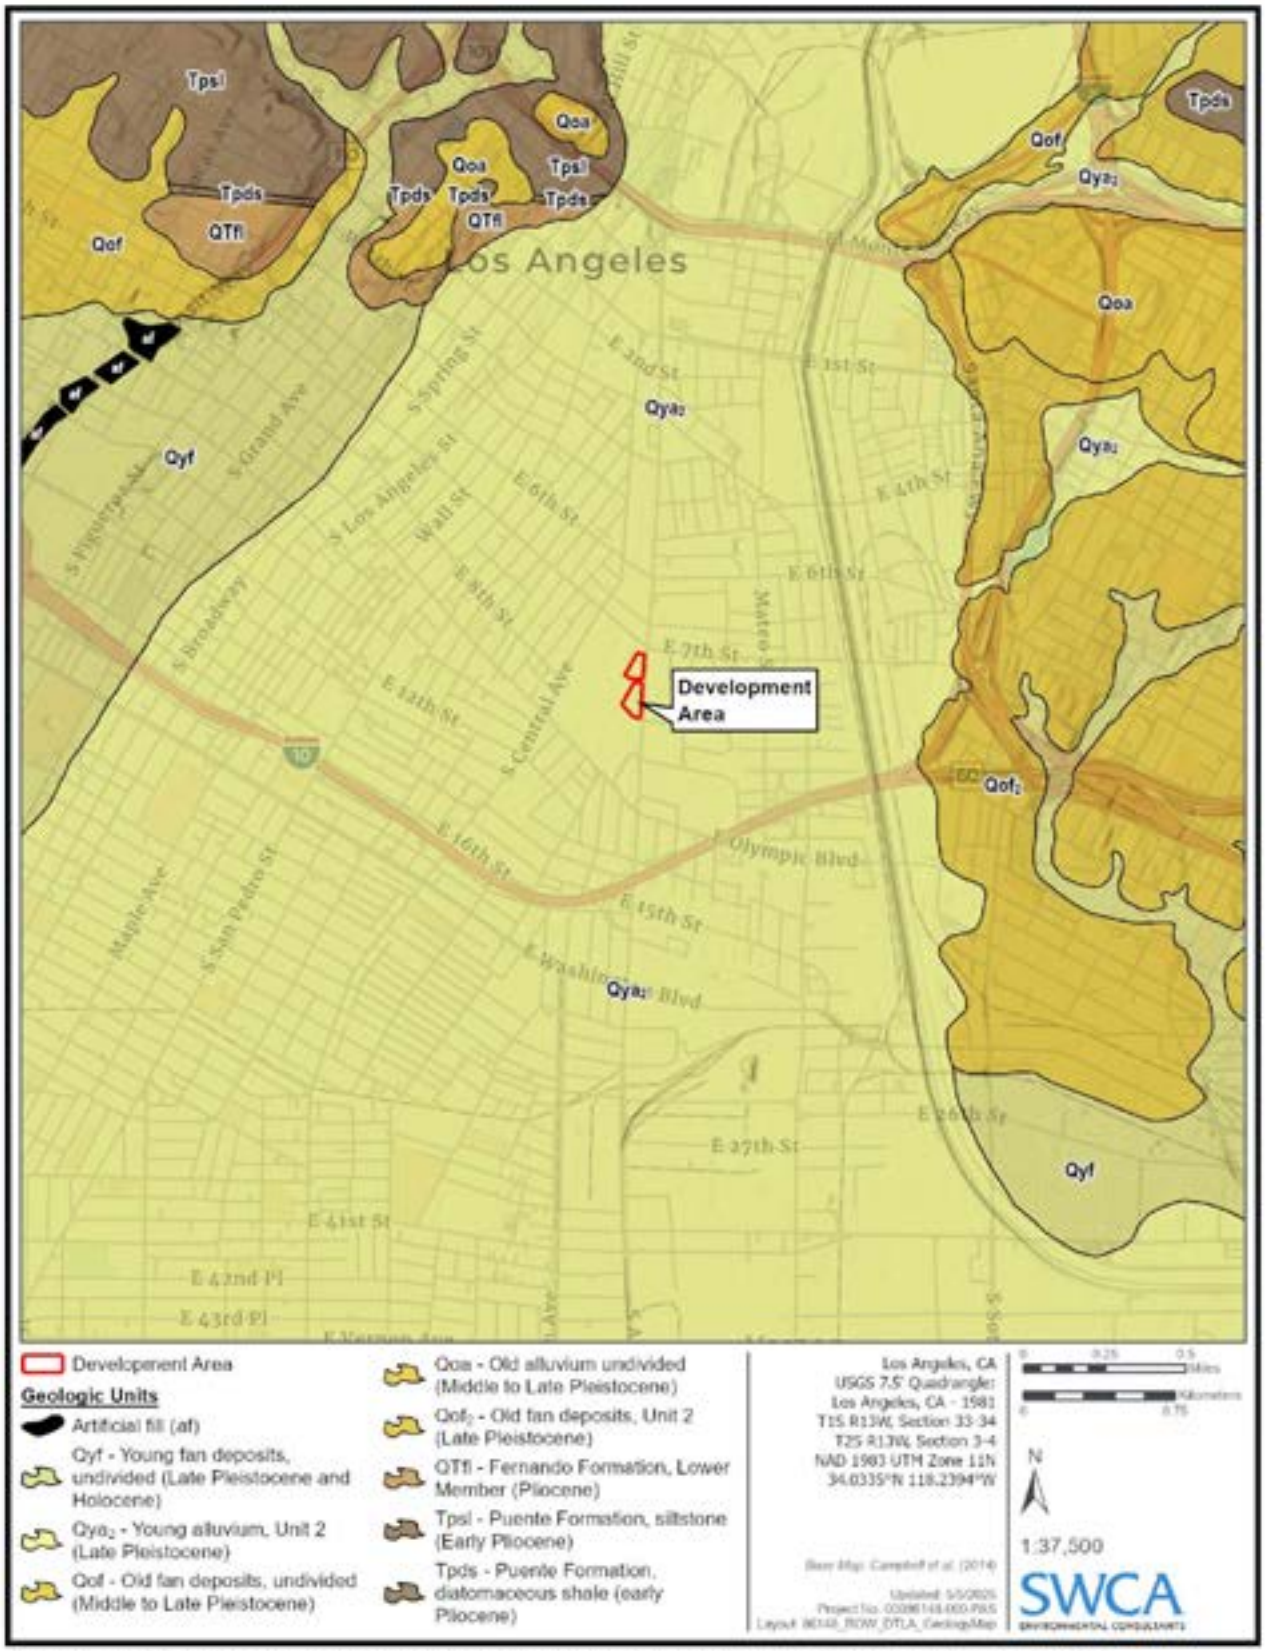

Figure 5. Surficial geology from Campbell et al. 2014. The Development Area is in a unit designated as Young Alluvium (Qya_2), which formed during the Late Pleistocene.

Old fan deposits in the region consist of gravel, sand, silt, and clay deposited along alluvial fans off the Santa Monica Mountains and are moderately to well consolidated and slightly to well cemented (Campbell et al. 2014; Dibblee 1991). There are comparatively older alluvial sediments formed in the Middle to Late Pleistocene—Old Alluvium (Qoa, Qof)—that are mapped as surface deposits to the east of the Development Area and likely underlay the Qya_2 unit, although the depth is likely to be highly variable and difficult to determine from sediment profiles.

Further detail on the sub-surface conditions was obtained through a geotechnical investigation of the Development Area conducted in 2023 by Group Delta, which involved drilling seven hollow-stem auger bores, performing eight cone penetration tests, and completing an analysis of the results. A technical memorandum for the Project with the preliminary results of the investigation indicates that up to 5 feet of undocumented fill was encountered in the borings taken across the Development Area (Bueno and Tsai 2023:1). Brick fragments were noted within the surficial fill stratum in all the bores.

Beneath the surficial fill are loose sediments down to a depth of 8 and 12 feet in the areas of Buildings A-B and Building C, respectively. The total depth of the bores ranged from 30 to 50 feet below grade. The loose sediments beneath the fill and the denser sands described below 15 feet appear to be composed of naturally deposited alluvium accumulated as flood plain deposits. Flood plain deposits from the Los Angeles River typically exhibit variations in the sequence of high- and low-energy depositional events. The alluvium consisted of various substratum composed of silty sand, poorly graded sand with silt, and well graded sand, which alternated in their stratigraphic sequence. Gravel content was generally low and did not exhibit much variation with depth. When present, the gravels were noted as being fine. Based on the sediment composition described in the geotechnical bore logs, there does not appear to be any evidence of high energy alluvial deposition. The sequence of silt and sand deposits are consistent with medium to low energy deposition from seasonal flooding along the Los Angeles River.

Hydrology

Several major watercourses drain the Los Angeles Basin, including the Los Angeles, San Gabriel, and Santa Ana Rivers and Rio Hondo. Flood events such as those recorded in the nineteenth and early twentieth centuries have produced massive deposits of alluvial sediments within the floodplain of the Los Angeles River, as well as the other major drainages in the Los Angeles Basin. Alluvial terraces formed where flooding water eroded uplifted landforms. In the area of Downtown Los Angeles, the backslopes in the location of Bunker Hill delineate the edge of the historical floodplain for the Los Angeles River. The south-flowing Los Angeles River is currently approximately 1.06 km (0.66 miles) west of the Development Area.

Historically, the primary channel of the Los Angeles River shifted its course multiple times within the Los Angeles Basin, oscillating between its current southerly course and one that flowed to the west from a point near the downtown area and then along the current course of Ballona Creek. Gumprecht (2001) plotted a speculative route for the former westerly courses and some of the shifts reported in the nineteenth century (Figure 6). Among the first recorded shifts is a shift that occurred in 1815 when floodwaters overflowed the former channel, shifting the course at least 0.8 km (0.5 mile) to the southwest, near the present route of Spring Street, and possibly flowing over or immediately adjacent to the existing Development Area. That flood is reported to have destroyed structures built as part of the original Los Angeles Pueblo (Gumprecht 2001:139–141) and may have also flooded all or parts of the Native American village site of Yaanga, which is believed to have been located nearby (see below, Native American Communities in Los Angeles).

Figure 6. Historical shifts in the Los Angeles River channels based on Gumprecht (2001:140) and areas of inundation.

Some shifts were more dramatic, changing by 90 degrees and altering the course of the river to the ocean. Before 1825, the river flowed west from what is now downtown Los Angeles and discharged into the Ballona Wetlands in what is now Playa del Rey. The river followed a western course approximated by Washington Boulevard and then turned southwest at the Baldwin Hills, flowing along the northwest-facing side of the slopes—the course now occupied by Ballona Creek (Gumprecht 2001:17). Heavy rains in 1825 caused the channel to overflow its banks and the Los Angeles River shifted its course fully south, emptying into the bay near San Pedro, where the river has discharged ever since. In subsequent years, the river would frequently shift its course within the southern floodplain, which in some areas measures up to 2 miles wide (Gumprecht 2001:16). However, these more dramatic shifts between the western and southern routes are likely to have occurred during most of the life of the watercourse, and certainly over during the last 13,000 years—the period in which there is evidence for Native Americans in southern California.

Flora and Fauna

The Development Area is in a fully urbanized setting and is devoid of natural vegetation and natural habitat for most endemic animal species. Even before the urbanization of the twentieth century, the ecology of the Los Angeles prairie had undergone a transformation during the preceding century as a result of ranching and agricultural practices that accompanied European settlement (see Schiffman 2005). Although there are fewer surviving examples of the pre-settlement ecology in the lower elevations compared with those of the surrounding hillsides, various attempts have been made to reconstruct the historical ecology of the Los Angeles Basin. Schiffman provides a cohesive summary of the vegetation structure and species composition for the Los Angeles Basin:

> Most steep hillsides were covered by impenetrably dense evergreen chaparral shrubs such as California lilac (*Ceanothus* spp.), chamise (*Adenostoma fasciculatum*), scrub oak (*Quercus berberidifolia*), and manzanita (*Arctostaphylos* spp.) or sparsely shrubby and drought deciduous coastal sage scrub vegetation that included buckwheat (*Eriogonum fasciculatum*), sages (*Salvia* spp.), and sagebrush (*Arternisia californica*). In contrast to the shrubby hills and mountain slopes the dense, clayey soils of the flat valleys and plains supported a diverse prairie vegetation of colorful ephemeral wildflowers mixed with grasses and other plants of low stature. In addition, woodlands of walnut (*juglans californica*) and oak (*Quercus agrifolia* and *Q. lobata*) were found in canyons and on some hillsides, and broad corridors of willow (*Salix* spp.), alder (*Alnus rhombifolia*), sycamore (*Platanus racemosa*), and mulefat (*Baccharis salicifolia*) lined the river floodplains and feeder creeks that dissected the landscape. (Schiffman 2005)

Küchler defined vegetation communities for the region, and the Development Area is situated in the unit designated as coastal sagebrush (Küchler 1977). In addition to the species Schiffman references, those found in the coastal sagebrush unit also include California aster (*Corethrogyne filaginifolia*), golden bush (*Isocoma menziesii*), coyote brush (*Baccharis pilularis*), encelia (*Encelia californica*), fuchsia-flowered gooseberry (*Ribes speciosum*), and monkey flower (*Mimulus aurantiacus*).

Along with the natural resources found within the inland environments, Native American communities in the Los Angeles Basin would have had access to plant, animal, and lithic resources along the coast and surrounding hills and mountains. Descriptions of these ecological conditions and the associated Native American uses of resources found therein is described elsewhere. For example, Lightfoot and Parrish (2009:253–277) provide a summary for coastal and inland settings for the southern California, an overview of the Santa Monica Mountains is included in King's (2011) report, and coastal environments are addressed in numerous studies such as those by Byrd and Raab (2007), Erlandson (1994), and Gamble (2008).

CULTURAL SETTING

Native American Archaeological Record

Over the years, researchers have devised numerous prehistoric chronological sequences to aid in understanding cultural changes at various scales (i.e., regional vs. local patterning) in southern California. California prehistory is generally divided into three broad temporal periods (i.e., Paleoindian, Archaic, and Emergent periods; see Fredrickson 1973, 1974, 1994) that reflect similar cultural characteristics throughout the state and were generally governed by climatic and environmental variables, such as the drying of pluvial lakes at the transition from the Paleoindian to the Lower Archaic. Numerous chronological sequences were also devised to characterize cultural changes on a smaller scale, within the subregion of southern California specifically.

Building on early studies and focusing on data synthesis and artifact types, Wallace (1955, 1978) developed a prehistoric chronology for the southern California coastal region that is still widely used today and is applicable to near-coastal and some inland areas. Wallace's prehistoric chronology for southern California was composed of four sequential horizons: Horizon I, Early Man; Horizon II, Milling Stone (hereafter Millingtstone); Horizon III, Intermediate; and Horizon IV, Late Prehistoric (Late Period). Although Wallace's 1955 synthesis initially lacked chronological precision due to a paucity of absolute dates (Moratto 1984:159), this situation has been alleviated by the availability of thousands of radiocarbon dates obtained by southern California researchers in the last several decades (Byrd and Raab 2007:217). As such, several revisions were subsequently made to Wallace's 1955 synthesis using radiocarbon dates and projectile point assemblages resulting in more refined chronologies and sequences (e.g., Koerper and Drover 1983; Koerper et al. 2002; Mason and Peterson 1994; see also Moratto 1984).

Additional primary syntheses for southern California prehistory were developed by Warren (1968) and King (1981, 1990), which used the growing archaeological datasets of specific subregions within southern California to define increasingly localized cultural sequences. Using the concepts of cultural ecology and cultural tradition, Warren (1968) proposed a series of six prehistoric traditions. Three of these traditions, the San Dieguito Tradition, Encinitas Tradition, and Campbell Tradition, correlated with Wallace's Horizons I, II, and III; and the Chumash Tradition, Takic Tradition (formerly "Shoshonean"), and Yuman Tradition are represented in Wallace's Horizon IV. These ecologically based traditions are applicable to specific regions within southern California. King (1981, 1990) later modified Wallace's (1955, 1978) sequence into three major periods of Chumash regional prehistory—Early, Middle, and Late—each of which contains phases or subphases. King's synthesis is based on stylistic changes in artifacts, particularly shell beads and ornaments, from Santa Barbara Channel burial assemblages, which he used to interpret the continuity in development of artifacts as an indication that Chumash culture developed locally in the last ~7,500 years. Arnold (1992) expanded King's chronology by adding a distinct Middle-to-Late Transition period, lasting from A.D. 1150 to 1300.

More recent efforts to synthesize various Native American archaeological chronologies for southern California incorporate geological time periods as a way of standardizing the terminology and emphasizing the correlation between human behavior and changes in the environment across different climatic periods. Figure 7 provides a reference point for the primary periods and cultural traditions discussed below along with chronologies denoted by "years before present" (BP) and calendar ages (B.C. and A.D.).[3]

[3] Elsewhere in this report uncalibrated radiocarbon ages are presented as radiocarbon years B.P. and their calibrated dates are expressed as cal BP

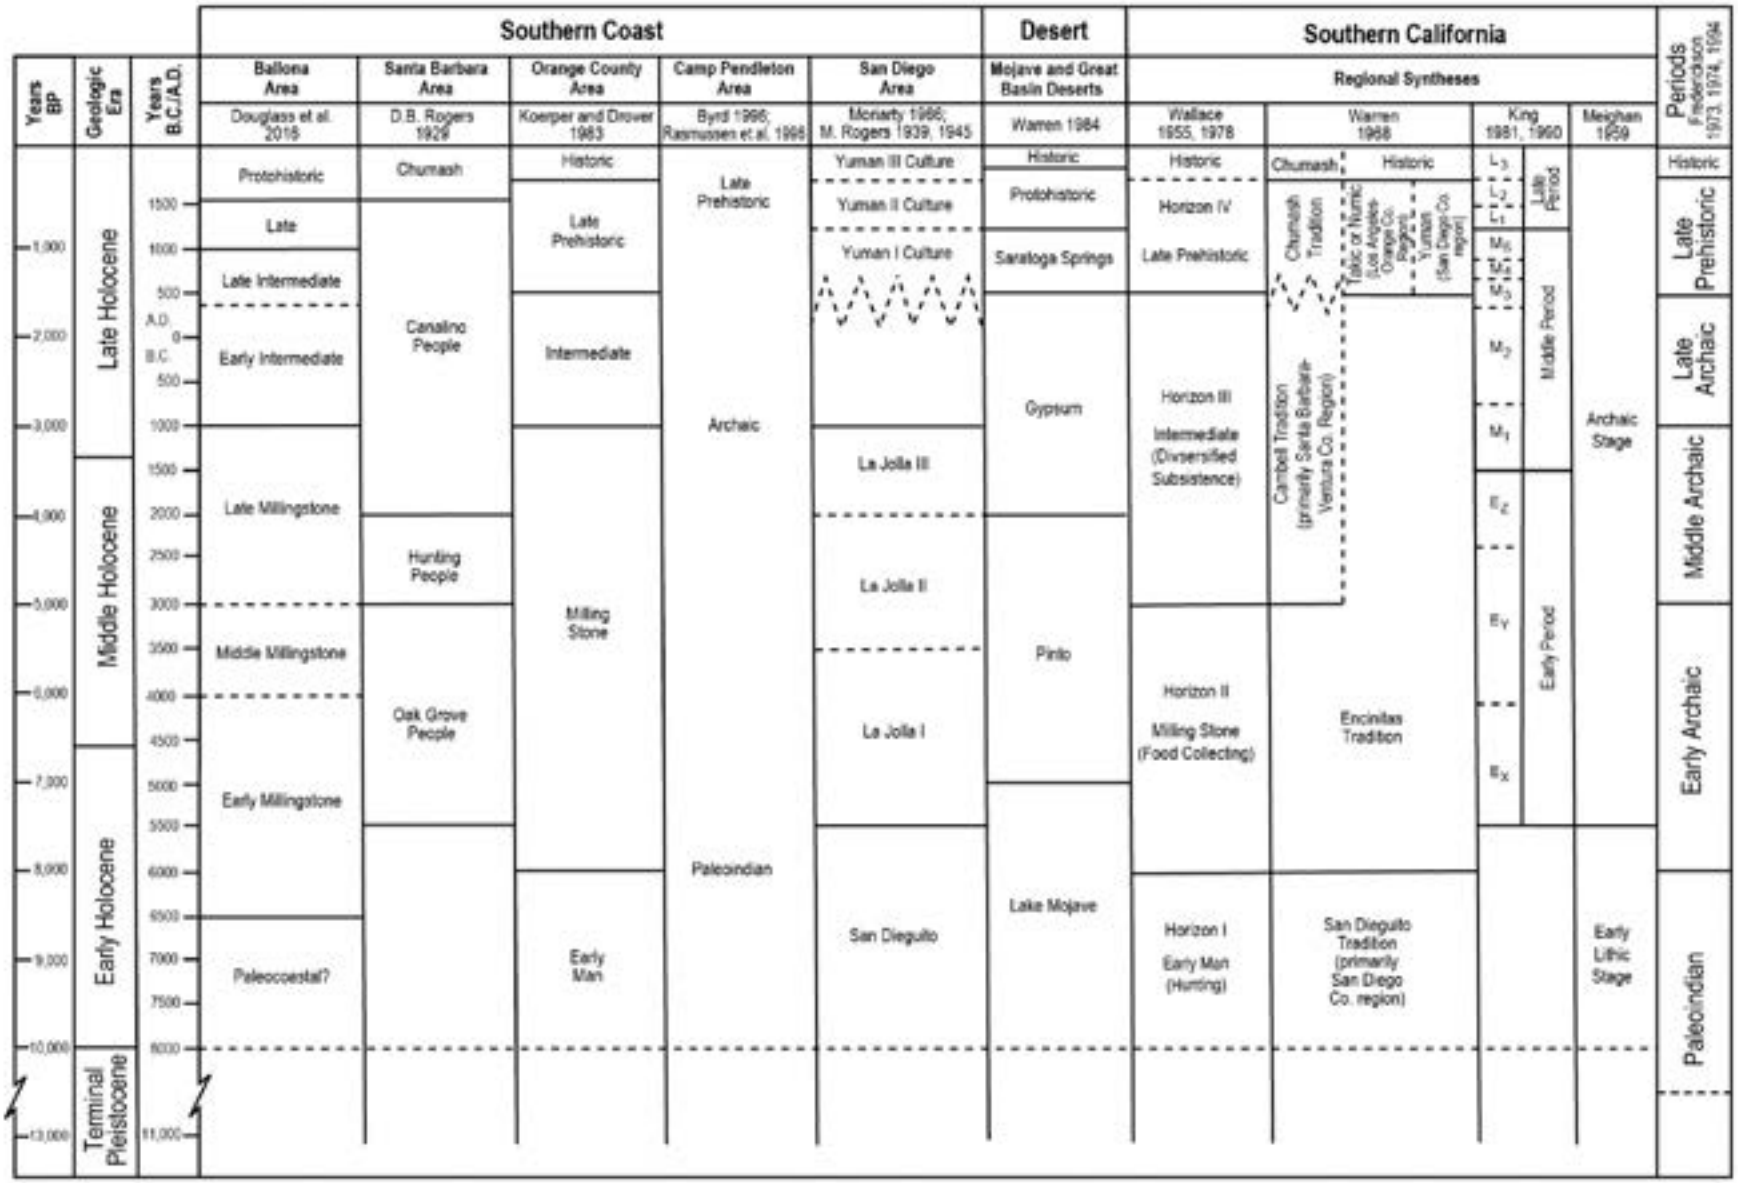

Figure 7. Chronological frameworks for southern California cultural traditions and archaeological contexts.

Terminal Pleistocene: Paleoindian / Paleocoastal Tradition (Before 11,700 BP)

Any discussion of human occupation of coastal areas during the Terminal Pleistocene (before 11,500 BP) must be prefaced with an understanding that sea level rise during this period of severely shifting climate inundated many kilometers of shoreline worldwide and along southern California coastlines specifically, submerging an unknown number of archaeological sites (i.e., Reeder-Myers et al. 2015). Therefore, any evidence that we do have of human occupation in what are now coastal settings is likely only a small fraction of what originally existed (see Erlandson et al. 2007, 2015).

The earliest evidence for human occupation in southern California is found on the northern Channel Islands, where multiple Terminal Pleistocene sites have been identified and dated in the past couple decades, firmly establishing the presence of early coastal-adapted people in the region (Erlandson et al. 1996, 2011, 2020; Erlandson and Braje 2008; Erlandson and Colton 1991). On Santa Rosa Island, human remains have been dated from the Arlington Springs site to approximately 13,000 years ago (Johnson et al. 2002). Recent excavations and radiometric dating of multiple archaeological assemblages on San Miguel, Santa Rosa, and Santa Cruz islands document Paleoindian technologies, subsistence strategies, and seasonality of site occupation during the latter part of the Terminal Pleistocene (~11,700 BP), with similarities to the Western Stemmed Tradition found across much of western North America (Braje et al. 2013; Erlandson 2013; Erlandson et al. 1987, 2011, 2020; Erlandson and Braje 2008; Jew et. al 2013; Rick et al. 2013).

Finely crafted chipped stone crescents like those recorded on the northern Channel Islands as part of the Paleocoastal toolkit were also found in surficial contexts on San Nicolas Island, suggesting an earlier occupation for the southern Channel Islands as well (Davis et al. 2010). It is possible that similarly early sites were present on the mainland California coast as well; however, the rate and degree of development beginning with Spanish colonization and continuing to the present has likely destroyed most early sites along the California mainland coast. Nevertheless, three fluted points representing the Clovis culture have been found in southern California mainland coastal areas, including one in Santa Barbara County (Erlandson et al. 1987), one in Los Angeles County near Malibu (Stickel 2000), and one in El Morro Canyon, in what is now Crystal Cove State Park in Orange County (Fitzgerald and Rondeau 2012). Additionally, numerous fluted projectile points of the Clovis and Folsom Traditions have been reported from inland contexts in central and southern California (e.g., Davis 1975; Dillon 2002; Moratto et al. 2011; Riddell and Olsen 1969; Rondeau 2006; Yohe II and Gardner 2016).

Early Holocene (~11,700 to 7000 BP)

HORIZON I: EARLY MAN

During the early twentieth century, several sensationalized finds were thought to be evidence of "Early Man" in the Los Angeles Basin; however, subsequent analyses have not held up as hoped. First, in 1914 human remains were found in direct association with extinct Pleistocene fauna at the La Brea Tar Pits (LAN-159/H) (Merriam 1914). Though early estimates suggested that this find extended up to 34,000 years ago, radiocarbon dating has since shown these remains to have an estimated age range of approximately 9,000 to 4,450 BP (Berger et al. 1971; Payen 1970), with the most recent redating using accelerator mass spectrometry (AMS) providing a calibrated[4] date range of ~10,200 cal BP (Fuller et al. 2016), placing this individual at the transition between the Paleocoastal/Paleoindian period and the Millingstone period. A second early discovery at Angeles Mesa in Baldwin Hills (the Haverty, or Angeles

[4] Uncalibrated radiocarbon ages are presented as radiocarbon years B.P. and their calibrated dates are expressed as cal B.P.

Mesa site, LAN-171) included partially mineralized skeletal remains of several individuals found in depths up to 7 m below surface (Brooks et al. 1990; Stock 1924). Issues with the various methods used to date these bones remain unresolved, however, and analyses have returned estimated dates of more than 50,000 years ago based on amino acid racemization (Taylor et al. 1985) and radiocarbon date ranges that span 3,870 ± 350 to 15,900 ± 50, representing an unacceptably large margin of error for a single individual (Berger et al. 1971; Brooks et al. 1990). There are similar concerns related to the age of remains referred to as "Los Angeles Man"—designated as LAN-172 (Lopatin 1940)—which were discovered in a similar depositional context less than 2 miles from the Haverty site in 1936 (Brooks et al. 1990; Erlandson et al. 2007:54).

Mainland sites attributed to Horizon I generally indicate that the economy was a diverse mixture of hunting and gathering, with a major emphasis on aquatic resources in many coastal areas (e.g., Jones et al. 2002) and a greater emphasis on large-game hunting inland. Fundamental elements of lithic tool technology described by Wallace (1955) for this period include numerous scrapers, choppers, chipped and notched crescents, and large blades and points. Wallace (1955) also describes clam shell and bone beads, along with an absence of seed grinding implements from the site type for this period, Malaga Cove. Several sites in Orange and San Diego Counties contain components that date between 9,000 and 10,000 years ago (Byrd and Raab 2007:219; Macko 1998a:41; Mason and Peterson 1994:55–57; Sawyer and Koerper 2006), and radiocarbon dates from the Goleta Slough area in Santa Barbara County indicate occupations spanning ca. 9300–8400 cal BP (ca. 7300–6400 B.C.) with a primary subsistence focus on lagoon/bay shellfish (Owen et al. 1964).

Middle Holocene (7000 to 4000 BP)

HORIZON II: MILLINGSTONE

The Millingstone horizon corresponds to the Early Holocene when rising sea levels continued to encroach on coastlines, though global climate was slowly stabilizing. Set during a warmer and drier climatic regime than the previous horizon, the Millingstone horizon is characterized by subsistence strategies centered on collecting plant foods and small animals, though in coastal areas where archaeological assemblages have been preserved there is also ample evidence of marine resource use during this time as well (Connolly et al. 1995; Rick et al. 2001). The importance of seed processing is apparent in the dominance of stone grinding implements in archaeological assemblages from this period, namely milling stones (metates) and hand stones (manos) (Erlandson 1991, 1994; Moriarty 1966; Warren 1967). The variety of site types from this period indicate a mobile settlement pattern, and recent research indicates that Millingstone horizon food procurement strategies varied in both time and space, reflecting divergent responses to variable coastal and inland environmental conditions (Byrd and Raab 2007:220).

Millingstone assemblages are characterized by the extensive use of milling implements (particularly manos and metates) and mullers along with scraper planes, choppers, and core tools and a general lack of finely crafted projectile points, though leaf-shaped points believed to be darts are present. The general lack of faunal remains along with bone and shell tools at some sites dated to this period have led researchers to suggest a stronger reliance of plant food resources (i.e., seeds) with only a minor focus on hunting. Several sites have been described for this horizon throughout southern California, including Little Sycamore in Ventura, Porter Ranch in San Fernando, and the La Jolla shellmounds in San Diego. Los Angeles County sites with Millingstone components include Malaga Cove (Level 2, LAN-138; Walker 1952), the Tank Site (LAN-1) in Topanga Canyon (Heizer and Lemert 1947; Treganza and Bierman 1958), the Zuma Creek site (LAN-174; Wallace 1955; see also Ascher 1959), the Sweetwater Mesa site (LAN-267; King 1967), the Shobhan Paul site (LAN-958; Porcasi and Porcasi 2006; Salls 1995); and the Parker Mesa site (LAN-215; King 1962). Primary sites with Millingstone components

in Orange County include Bolsa Chica (ORA-83; Herring 1961, 1968), ORA-64 (Drover et al. 1983; Macko 1998b), and the Landing Hill site (Cleland et al. 2007).

HORIZON III: INTERMEDIATE

This horizon corresponds with the Middle Holocene and early Late Holocene time periods geologically and marks the point when current shorelines were established in most parts of the world. Consequently, evidence for marine resource use appears to increase after 5,000 to 6,000 years ago. The Intermediate horizon is characterized by a shift toward a hunting and maritime subsistence strategy, along with a wider use of plant foods. An increasing variety and abundance of fish, land mammal, and sea mammal remains are found in sites from this horizon along the California coast. Related chipped stone tools suitable for hunting, including side-notched projectile points, are more abundant and diversified, and shell fishhooks became part of the toolkit during this period. Mortars and pestles became more common during this period, gradually replacing manos and metates as the dominant milling equipment and signaling a shift away from the processing and consuming of hard-shelled seed resources to the increasing importance of fleshier fruits like the acorn (e.g., Glassow et al. 1988; True 1993).

Technological markers described by Wallace (1955) for this horizon consist of basket-hopper mortars, mortar and pestle, diverse and plentiful chipped stone assemblages with broad leaf-shaped blades and heavy often stemmed projectile points, bone and antler tools are present to some degree but not in the quantity seen during later phases, along with occasional use of bitumen (asphalt) and steatite. Faunal assemblages often include terrestrial mammals representing wild game, along with some marine mammal bones and often high densities of shellfish remains.

The Middle Holocene also marks a time of cultural innovation in the archaeological record of California. Significant cultural developments are seen in the increasing formation of larger settlements, the intensification of long-distance trade networks including distinct cultural spheres throughout western North America, and the elaboration of art and personal aesthetics (e.g., shell and stone pendants and increasing variety of shell bead types and styles) (Erlandson and Glassow 1997; Glassow 1997; Howard and Raab 1993; Jenkins and Erlandson 1996; King 1990; Raab and Howard 2002; Vellanoweth 2001).

There is also evidence suggesting migrations into coastal southern California by desert peoples from the east during the Intermediate period based on changes in mortuary practices (i.e., cremations), the presence of desert tanged projectile points, and increased numbers of stone as opposed to shell beads. This question has been discussed by several archaeologists (Koerper 1979; Kowta 1961; Kroeber 1925; Moratto 1984; True 1966; Van Horn 1987, 1990) with most suggesting an arrival date of approximately 1500 cal BP, though some argue for a much earlier migration at around 3500 cal BP, which coincides with the Millingstone/Intermediate period transition (Sutton 2009). Of course, it is possible, and even likely, that multiple migrations of various scale occurred over the course of hundreds, or thousands, of years.

Late Holocene (3000 BP to Spanish Colonization)

HORIZON IV: LATE PREHISTORIC

In the Late Prehistoric horizon, there was an increase in the use of plant food resources in addition to an increase in terrestrial and marine mammal hunting. There was a concomitant increase in the diversity and complexity of material culture during the Late Prehistoric horizon, demonstrated by more classes of artifacts. The recovery of a greater number of small, finely chipped projectile points suggests increased use of the bow and arrow rather than the atlatl (spear thrower) and dart for hunting. Steatite cooking vessels and containers are also present in sites from this time, and there is an increased presence of composite bone gorges and circular shell fishhooks; perforated stones; arrow shaft straighteners made

of steatite; a variety of bone tools; and personal ornaments such as beads made from shell, bone, and stone. Olivella shell bead styles include a variety of wall and callus beads in addition to the previous spire-lopped, and cup beads. There was also an increased use of asphaltum (also known as bitumen) for waterproofing basketry and caulking canoes and as an adhesive. (Late Prehistoric burial practices are discussed in the Ethnographic Overview section below.)

Technological markers of this horizon as described by Wallace (1955) include the increased use of the bow and arrow, stemless points with concave or convex bases, steatite containers, widespread and use of asphaltum as adhesive, increased abundance and types of bone tools as well as shell, bone, and stone ornaments. Wallace also describes notable distinctions between northern and southern groups during this period including less pottery north of Orange County, where steatite vessels were more prevalent, and the presence of portable mortars and pestles and basket-hopper slabs in the north with bedrock mortars and milling stones being more prevalent in the San Diego area.

By A.D. 1000, fired-clay smoking pipes and ceramic vessels were being used at some sites (Drover 1971, 1975; Meighan 1954; Warren and True 1961). The scarcity of pottery in coastal and near-coastal sites implies that ceramic technology was not well developed in that area, or that occupants were trading with neighboring groups to the south and east for ceramics. The lack of widespread pottery manufacture is usually attributed to the high quality of tightly woven and watertight basketry that was caulked with bitumen (asphaltum) and functioned in the same capacity as ceramic vessels.

During this period, there was an increase in population size accompanied by the advent of larger, more permanent villages (Wallace 1955:223) particularly at the mouths of large mainland coastal canyons and drainages with year-round water supplies (McLendon and Johnson 1999). Large populations and, in places, high population densities are characteristic, with some coastal and near-coastal settlements containing as many as 1,500 people. Many of the larger settlements were permanent villages with year-round residents. The populations of these villages may have also increased seasonally.

In Warren's (1968) cultural ecological scheme, the period between A.D. 500 and European contact, which occurred as early as 1542, is divided into three regional patterns: Chumash/Canaliño (Santa Barbara and Ventura Counties), Takic/Numic (Los Angeles, Orange, and western Riverside Counties), and Yuman (San Diego County). The seemingly abrupt introduction of cremation, pottery, and small triangular arrow points in parts of modern-day Los Angeles, Orange, and western Riverside Counties at the beginning of the Late Prehistoric period is thought to be the result of a Takic migration to the coast from inland desert regions. Modern Gabrielino, Juaneño, and Luiseño people in this region are considered the descendants of the Uto-Aztecan, Takic-speaking populations that settled along the California coast in this period.

Gabrielino Ethnography

The Development Area was historically occupied by the Gabrielino, whose lands encompassed portions of current day Los Angeles, Orange, San Bernadino, and Riverside Counties (Bean and Smith 1978:538; Kroeber 1976:Plate 57). Surrounding Native groups included the Chumash and Tatataviam/Alliklik to the north, the Serrano to the east, and the Luiseño/Juaneño to the south (Figure 8). The interaction between the Gabrielino and many of their neighbors in the form of intermarriage and trade was regularly documented in ethnographic accounts. The name "Gabrielino" (also spelled Gabrieleno and Gabrieleño) denotes those people who were associated with Mission San Gabriel, whereas those who were associated with the nearby Mission San Fernando were referred to as Fernandeño. In the Mission and Rancho periods, Mission San Gabriel included Natives of the greater Los Angeles area, as well as members of surrounding groups such as Kitanemuk, Serrano, and Cahuilla.

Figure 8. Native American tribal territories.

There is little evidence that the people we call Gabrielino had a broad term for their group (Dakin 1978:222). Instead, it appears that people identified themselves as inhabitants of a specific community with locational suffixes. For example, a resident of Yaanga was called a Yabit, which Johnston likened to the way that a resident of New York is called a New Yorker (Johnston 1962:10). Native words suggested as labels for the broader group of Native Americans in the Los Angeles region include Tongva (or Tong-v) (Merriam 1955:7–86) and Kizh (Kij or Kichereno) (Heizer 1968:105), and many present-day descendants have taken on their preferred group name. The term Gabrielino is used in the remainder of this report to designate Native people of the Los Angeles Basin and their descendants.

The Gabrielino subsistence economy was centered on gathering and hunting. The surrounding environment was rich and varied, and the people used resources in mountains, foothills, valleys, deserts, riparian, estuarine, and open and rocky coastal eco-niches. As was the case for Native people throughout California, acorns were the staple food and had been an established part of the diet by the time of the Early Intermediate period. Inhabitants supplemented acorns with the roots, leaves, seeds, and fruits of a variety of flora (e.g., islay, cactus, yucca, sages, and agave). Freshwater and saltwater fish, shellfish, birds, reptiles, and insects, as well as large and small mammals, were also consumed (Bean and Smith 1978:546; Kroeber 1925:631–632; McCawley 1996:119–123, 128–131).

The Gabrielino used a variety of tools and implements to gather and collect food resources, including the bow and arrow, traps, nets, blinds, throwing sticks and slings, spears, harpoons, and hooks. Groups residing near the ocean used oceangoing plank canoes and tule balsa canoes for fishing, travel, and trade between the mainland and the Channel Islands (McCawley 1996:7). Gabrielino people processed food with a variety of tools, including hammer stones and anvils, mortars and pestles, manos and metates, strainers, leaching baskets and bowls, knives, bone saws, and wooden drying racks. Food was consumed from a variety of vessels including soapstone bowls and Catalina Island steatite was used to carve ollas and cooking vessels (Blackburn 1963; Kroeber 1925:629; McCawley 1996:129–138).

At the time of Spanish colonization, the basis of Gabrielino religious life was the Chinigchinich, centered on the last of a series of heroic mythological figures. Chinigchinich gave instruction on laws and institutions and taught the people how to dance as a form of religious practice. He later withdrew into heaven, where he rewarded the faithful and punished those who disobeyed his laws (Kroeber 1925:637–638). The origins of the Chinigchinich are somewhat unclear as it seems to have been relatively new when the Spanish arrived. It was spreading south into the southern Takic groups even as Christian missions were being built and may represent a mixture of native and Christian belief and practices (McCawley 1996:143–144).

Deceased Gabrielino were either buried or cremated, with inhumation more common on the Channel Islands and the neighboring mainland coast, and cremation predominating on the remainder of the coast and in the interior (Harrington 1942; McCawley 1996:157). Remains were buried in distinct burial areas, either directly associated with villages or without apparent village association (Altschul et al. 2007). Cremation ashes have been found in archaeological contexts buried within stone bowls and in shell dishes (Ashby and Winterbourne 1966:27), as well as scattered among broken ground stone implements (Cleland et al. 2007). Archaeological data such as these correspond with ethnographic descriptions of an elaborate mourning ceremony that included a variety of offerings, including seeds, stone grinding tools, otter skins, baskets, wooden tools, shell beads, bone and shell ornaments, and projectile points and knives. Offerings varied with the sex and status of the deceased (Dakin 1978:234–365; Johnston 1962:52–54; McCawley 1996:155–165).

For more than 2,500 years, the Gabrielino and their predecessors practiced the kotuumot kehaay, or mourning ceremony, an important community ritual by which the living assisted the soul of the deceased on its journey to the land of the dead (Hull 2011, 2012; Hull et al. 2013). It was not only an act of loving

remembrance; the Gabrielino believed that the spirits of the deceased were dangerous and must be treated properly lest they molest the living (Boscana 1978). Observed every 1 to 4 years to commemorate those who had died since the previous iteration, the 8-day mourning ceremony was either conducted in late summer or in the same month as the person to be honored had died. The ceremony included four primary rites: ritual clothes washing, clothes burning, image burning, and a distribution of the property of the dead. It took place within a 5-yard-diameter circular brush enclosure called a yovaar, which was decorated with poles at cardinal directions topped with figures, or around a 40- to 50-foot-high central kotuumut pole that was painted in various colors representing body parts and erected in a pit in the ground surrounded by offerings of food, clothing, baskets, beads, and money. It included a hosted feast, paid dancers, and the ritual destruction and burial of valuable goods (McCawley 1996:161–165; Merriam 1955).

Hugo Reid, a Scottish immigrant married to a Gabrielino woman and owner of San Gabriel Mission in the 1840s, described the post-burial treatment of grave goods by the Gabrielino in his 1852 letters:

> When a person died, all the kin collected to lament and mourn his or her loss. After lamenting a while a mourning dirge was sung. If the deceased were the head of the family, or a favorite son, the hut in which he died was burned up, as likewise all of his personal effects, reserving only some article or another, or a lock of hair. This reservation was not as a memento of the deceased, but to make a feast with on some future occasion, generally after the first harvest of seeds and berries. (Dakin 1978:235)

Discussing the culmination of the ceremony itself, Reid continued:

> On the eighth day the…old women were employed to make more food than usual, and when the sun was in its zenith, it was distributed, not only among the actors, but to the spectators likewise. After eating, a deep hole was dug, and a fire kindled in it, when the articles reserved at the death of relatives were committed to the flames; at the same time, baskets, money, and seeds were thrown to the spectators, as in the marriage ceremony. During the burning process, one of the seers, reciting mystical words, kept stirring up the fire to ensure the total destruction of the things. The hole was then filled up with earth and well trodden down. The feast was over. (Dakin 1978:242–243)

This mourning ceremony has deep roots in southern California, predating the Spanish period (1769–1834) by at least 2,000 years (Hull et al. 2013). It was also reportedly practiced in mid-nineteenth century Gabrielino communities in San Fernando, Piru, and Saticoy (Blackburn 1976:232), in neighboring Luiseño- and Cahuilla-speaking regions, including the greater Los Angeles area (Dietler et al. 2018; Morris et al. 2016).

Continuity After Colonization

The traditional lifeways of Native California peoples were dramatically altered by the Spanish mission system and later Mexican and American settlement of the area. The incursion of these new groups also introduced diseases that devastated many indigenous populations. The dissolution of their culture alienated them from their traditional subsistence patterns, social customs, and marriage networks. European diseases, against which they had no immunity, reached epidemic proportions, and Gabrielino populations were rapidly decimated (Johnson 1987). The increase in agriculture and the spread of grazing livestock into their collecting and hunting areas made maintaining traditional lifeways increasingly difficult. Although many Gabrielino were eventually subsumed by the mission system, some refused to give up their traditional existence and escaped into the interior regions of the state, where they survived as refugees living with other tribes.

The increase in agriculture and the spread of grazing livestock into their collecting and hunting areas made maintaining traditional lifeways increasingly difficult. Although many Gabrielino were eventually subsumed by the mission system, some refused to give up their traditional existence and escaped into the interior regions of the state, where they survived as refugees living with other tribes.

Many researchers have brought attention to the role of Native American labor in developing and sustaining the Spanish and Mexican settlements providing crucial services and highly skilled roles across multiple types of industry (Akins and Bauer Jr. 2021; Anderson 2005:81–82; Hackel 1998, 2005:272–320; Phillips 2010; Silliman 2001).

> The involvement of Native American groups in any of the standard colonial institutions in the Americas—missions, ranchos, trade outposts, presidios, forts, and secular towns—revolved around labor, even in contexts of frequent interethnic marriage. Sometimes colonial groups forced labor on native societies; other times, indigenous peoples found colonial labor opportunistic and capitalized on it. In either case, labor constituted one of the primary and most influential interpersonal and intercultural relations in pluralistic colonial communities. (Silliman 2001:379–384)

Gabrielino acquired equestrian skills used in herding, corralling, and branding cattle, and they routinely conducted the work of killing and skinning livestock. They demonstrated an aptitude for the engineering needed to create irrigation systems—finding grades, laying out ditches, and managing watering regimes. Irrigation was crucial for supplying domestic supplies and agriculture, especially wine making, which also relied on Gabrielino to plant the grapevines. Native American women and children provided crucial household chores within the ranchos across the Los Angeles Basin: "Most of those (Native Americans) who left the missions remained close by, often in their traditional tribal homeland, and worked on ranchos" (Akins and Bauer Jr. 2021:112).

During the American period, Native Americans found work in citrus groves and other large-scale agricultural operations. During the twentieth century, Native Americans affiliated with tribes from outside the region increasingly came to Los Angeles, some out of necessity or in pursuit of new opportunities, and others because of the federal government's termination and relocation policies (Akins and Bauer Jr. 2021:266). Native American workers made important contributions to several of the industries important during the early and middle parts of the twentieth century, such as aviation and film.

Whereas the contribution of Native American labor is clearly critical to an account of local history, Phillips offers an important consideration in terms of the motivation for considering this perspective.

> By examining how Indians adjusted to the new work regime and by describing how many became efficient workers, the focus remains on Indians themselves. Recognizing adaptation and efficiency, however, is far different from approving the system in which they were achieved…The missions radically altered Indian culture, but they did not destroy Indian people. Even secularization—the systematic breakup of the mission system in the 1830s—was not designed to destroy Indians. In fact, Indians played an important role in this crucial event in California history, a role downplayed by some historians. (Phillips 2010:17–19).

It is estimated that several thousand Gabrielino descendants currently live in the Los Angeles area, though no reservations or rancherias were ever set aside, and no tribal organizations are federally recognized. Gabrielino descendants are represented by the following tribal organizations who actively strive to maintain their cultural legacy: Gabrielino-Tongva Indians of California Tribal Council, the Gabrielino-Tongva Indian Tribe, the Gabrielino/Tongva Nation, the Gabrielino/Tongva San Gabriel Band of Mission Indians, and the Gabrieleño Band of Mission Indians – Kizh Nation.

Locating Former Native American Settlements, Placenames, and Sites

In general, it has proven difficult to establish the precise location of Native American settlements occupied immediately preceding and following Spanish arrival in California approximately 250 years ago (McCawley 1996:31–32). Many of the settlements and so-called villages had long since been abandoned by the time ethnographers, anthropologists, and historians attempted to document any of their locations, at which point Native American lifeways had been irrevocably changed. McCawley quotes Kroeber (1925:616) in his remarks on the subject, writing that "the opportunity to prepare a true map of village locations 'passed away 50 years ago'" (McCawley 1996:32). Thus, even with ethnographic, historical, and archaeological evidence, it can be difficult to conclusively establish whether any given assemblage represents the remains of the former village site.

Several factors have confounded efforts to reidentify former Native American settlements. First, many settlements were recorded with alternative names and spellings. In some cases, Spanish-era rancho grants may have bounded Native American villages, and in others the Spanish ranchos adopted Native American placenames, such as Kaweenga, Tujunga, Topanga, and Cucamonga. Second, there have been conflicting reports on the meaning and locational reference of the placenames. In addition to differences in the interpretation of a given word, some of the placenames refer to a site using relatively vague terms that could fit several possible locations, or the word may reference a natural feature that no longer exists such as a type of plant that once grew in an area now fully urbanized. Third and perhaps most importantly, Native American placenames recorded in historic records and reported in oral histories did not necessarily represent a continually occupied settlement within a discrete location, which is how the term "village" is commonly understood today. Instead, in at least some cases, the settlements were represented by several smaller camps scattered throughout an approximate geography, shaped by natural features that were subject to change over generations (Ciolek-Torello and Garraty 2016; Johnston 1962:122). Furthermore, the criteria for what constitutes a village site have been especially lacking in consistency and specificity, even within a strictly academic context (see summary by Ciolek-Torello and Garraty [2016:69]). Much of the debate in this regard concerns whether sites were occupied on a permanent or temporary basis, and archaeological data do not always provide unequivocal evidence to make a reliable classification for a given site.

Still, within the range of terms put forth to characterize different types of Native American settlements, there are conventions and core insights shared among scholars. Prehistoric sites in coastal California, for example, are commonly referenced in archaeological sources as residential sites, habitation sites, and seasonal camps, whereas the term *village* is more often used to reference Mission period settlements such as the Chumash sites of Humaliwo, Helo', and Muwu, or Luiseño sites such as Topomai (Ciolek-Torello and Garraty 2016:69). These Spanish and Mexican period sites are also sometimes referred to as rancherias—a term with connotations for a more permanent settlement and often used synonymously with village. The convention was established in 1852 by Hugo Reid who published the first list of Native American placenames in the Los Angeles area, which was by no means comprehensive (Stoll et al. 2016:387–389). The more generic terms of *settlement* and *site* will be used in this report and refer to places where Native American communities were once gathered. Native American sites may also refer to locations where archaeological materials, including human remains, have been identified. Such locations may consist of one or more known archaeological resources or a general area in which an archaeological resource could exist.

NATIVE AMERICAN COMMUNITIES IN LOS ANGELES

The precise location of most Native American villages in the Los Angeles Basin is subject to much speculation, maps depicting villages throughout the greater Los Angeles area show these sites located along rivers or streams. In some cases, Spanish-era rancho grants may have bounded Native American

villages, and in others the Spanish ranchos adopted Native American placenames, such as *Kaweenga, Tujunga, Topanga,* and *Cucamonga.* Alternative names and spellings for communities, and conflicting reports on their meaning or locational reference further complicate efforts at determining the location of actual village sites. Native American placenames referred to at the time of Spanish contact did not necessarily represent a continually occupied settlement within a discrete location, rather in at least some cases, the communities were represented by several smaller camps scattered throughout an approximate geography, shaped by natural features that were subject to change over generations (see Johnston 1962:122). Many of the villages had long since been abandoned by the time ethnographers, anthropologists, and historians attempted to document any of their locations, at which point the former village sites were affected by urban and agricultural development, and Native American lifeways had been irrevocably changed. McCawley quotes Kroeber for his remarks on the difficulty of reliably locating former village sites, writing that "the opportunity to prepare a true map of village locations 'passed away 50 years ago'" (Kroeber 1925:616 as cited in McCawley 1996:32). Thus, even with ethnographic, historical, and archaeological evidence, it can be difficult to conclusively establish whether any given assemblage represents the remains of the former village site.

The following sections provide summaries of the named settlements closest to the Development Area, including Yaanga and Geveronga, which are both reported to have been in the downtown area of Los Angeles (McCawley 1996:57).

Yaanga and Settlements in Downtown Los Angeles

Although the precise location of any given village is subject to much speculation, it is clear the banks of the Los Angeles River were home to many Gabrielino villages throughout the greater Los Angeles area (Figure 9). The closest ethnographically documented village to the Development Area is Yaanga (alternative spellings and names include Yang-na, Yangna, and Yabit) (see Figure 9). Although the actual location is disputed, generally Yaanga is believed to have been located near present-day Union Station, approximately 2.25 km (1.4 miles) north of the Development Area (McCawley 1996:57; Morris et al. 2016). Yaanga is among the major Native American communities encountered by the Portola party when they passed through the Los Angeles Basin in 1769 and was perhaps the largest Gabrielino settlement within the Los Angeles Basin. The location of Yaanga has long been considered synonymous with that of Los Angeles, first as the Spanish pueblo, then the town and city.

Historians and archaeologists have presented multiple possible village locations in the general area surrounding Union Station; however, like the Los Angeles Pueblo itself, it is likely that the village was relocated from time to time due to major shifts of the Los Angeles River during years of intense flooding. Dillon (1994) presented an exhaustive review of the potential locations, most within several blocks of the Los Angeles Plaza, in the location of present-day Olvera Street near Union Station. Johnston (1962:122) concluded that "in all probability *Yangna* lay scattered in a fairly wide zone along the whole arc [from the base of Fort Moore Hill to Union Station], and its bailiwick included as well seed-gathering grounds and oak groves where seasonal camps were set up." A second settlement, Geveronga, was recorded in mission registers and has also been described in ethnographic accounts as immediately adjoining the Pueblo of Los Angeles (McCawley 1996:57). The approximated location for Geveronga is 4.46 km (2.8 miles) northwest of the Development Area (see Figure 9). By contrast to Yaanga, very little is known about Geveronga, except that it was mentioned in ethnographic accounts as having been a settlement immediately adjoining the Pueblo of Los Angeles, and that Mission San Gabriel records identify 31 people as having come from here between 1788 and 1809 (McCawley 1996:57).

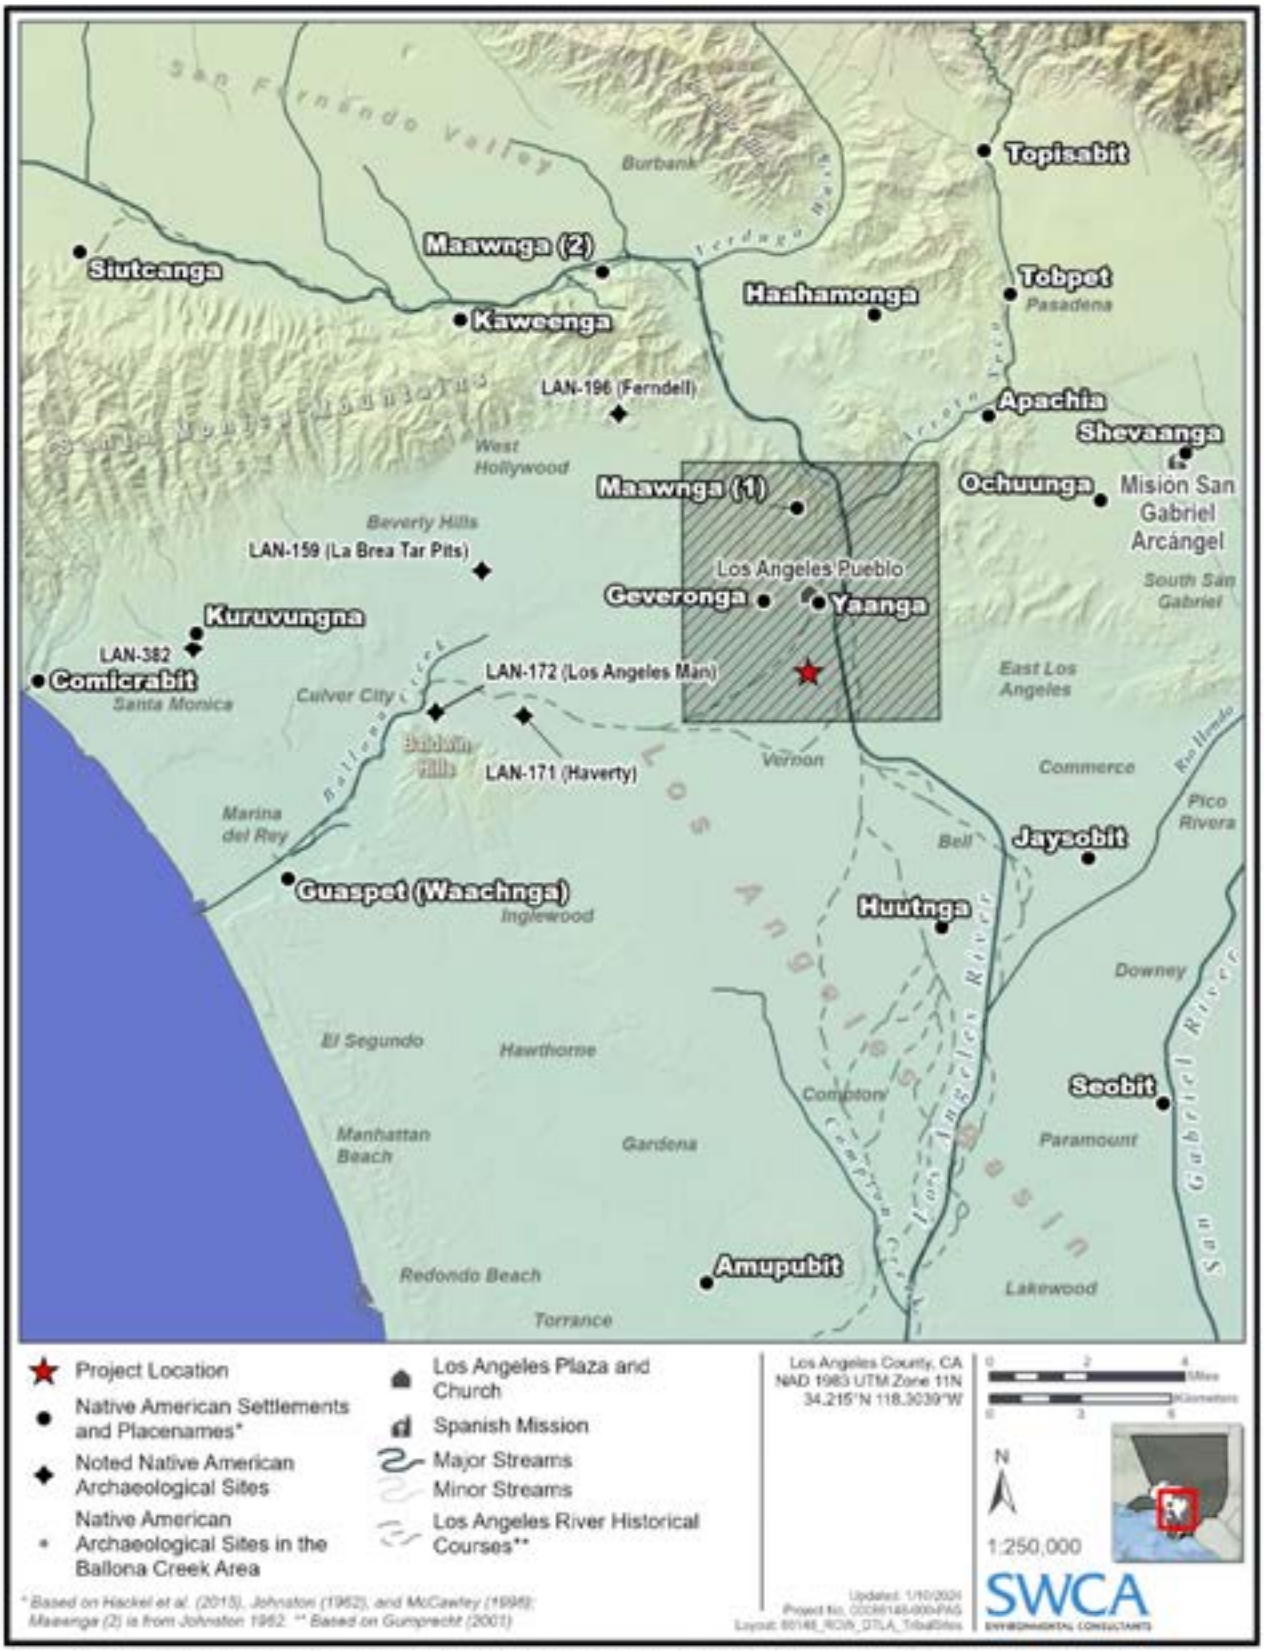

Figure 9. Native American communities and sites in the greater Los Angeles area; locations from Hackel et al. (2015) and Gumprecht (2001).

Yaanga Post 1781

After the settlement of Los Angeles in 1781, Yaanga faced many new challenges because of its proximity to the new city. The last recorded birth at Yaanga is believed to have been in 1813, after which the village was forced to relocate south of the original site (Morris et al. 2016:97). This new village, known as Ranchería de los Poblanos by the Angelenos, is believed to have been located at the intersection of Los Angeles Street and 1st Street, approximately 1.9 km (1.18 miles) north of the Development Area (Morris et al. 2016:96–97). This rancheria existed for approximately 10 years, between 1826 and 1836, after which the indigenous population was forced to relocate to a plot of land near Commercial and Alameda Streets where it persisted for another approximately 10 years from 1836 and 1845 (Morris et al. 2016). Then nearby landowners started registering complaints and the Native American community was once again forced to relocate even further east, across the Los Angeles River to a site called Pueblito, which itself was razed in 1847. This coincided with legislation passed to require the remaining Native American population to live in dispersed settlements or with their employers throughout the city.

There was another rancheria within the boundaries of Los Angeles during this time: Rancheria de los Pipimares. The rancheria may have been in existence from as early as 1820 but ceased to exist after 1846 (Morris et al. 2016). Archival research identified the likely location of Rancheria de los Pipimares to be within the area of San Pedro and 7th Streets, approximately 1 km (0.62 mile) northwest of the Development Area (Morris et al. 2016).

Evidence for Yaanga

Aside from the ethnographic evidence suggesting the location of these villages, little direct, indisputable archaeological evidence for the location of either village has been produced to date. Archaeological materials reportedly were unearthed during the construction of Union Station in 1939 (2.25 km [1.4 miles] north of the Development Area), and "considerably more" in 1970 during the rebuilding of the Bella Union Hotel on the 300 block of North Main Street (2.17 km [1.35 miles] north of the Development Area) (Johnston 1962:121; Robinson 1979:12). The preponderance of available evidence indicates that there were one or more early Historic period Native American communities west of the Los Angeles River near the original plaza site. This assumption is supported through several lines of ethnographic evidence, including the expedition journal of Fr. Juan Crespi and engineer Miguel Costansó, both of whom were associated with the 1769 Portolá expedition. The notes from these sources indicate the village was located between 2.0 and 2.4 km (1.3 and 1.5 miles) west-southwest from the Los Angeles River on high and level ground. The Pueblo of Los Angeles was documented to have been founded directly adjacent to this village. The location of Yaanga was also referenced by long-time Los Angeles resident Narciso Botello and Gabrielino consultant José María Zalvidea, who indicated that Yaanga was originally located adjacent to the original site of the Los Angeles Plaza (Morris et al. 2016:112).

During construction of the Metropolitan Water District headquarters building in the mid-1990s, approximately 2.15 km (1.34 miles) south of the Development Area, an archaeological site (LAN-1575/H) was identified and included a substantial Native American component composed of artifacts and primary interments and cremation reburials. The archaeological investigation by Applied Earthworks found evidence of occupation that both predated and overlapped the Mission and Rancho period, but ultimately the researchers could not reach a definitive conclusion as to whether portions of the site represented the material remains of Yaanga (Goldberg et al. 1999:151–159). In 2019, during construction of Metro's Patsaouras Bus Plaza Station, which was partly within the boundary of LAN-1575/H, new site components were identified that included Native American human remains and artifacts, as well as Historic period deposits (i.e., not affiliated with Native Americans). The new site components are consistent with the types and ages identified in LAN-1575/H. Some of these new discoveries were

identified within the boundary designated for LAN-1575/H, but the majority extend east along U.S. Route 101 and Interstate 10.

While most of the natural landscape features that would have characterized Yaanga and its surroundings are no longer present and the precise location of the settlement remains an open question, the general location still retains its association with Yaanga and is considered an important place by contemporary Gabrielino groups. The proximity of Yaanga to a massive sycamore tree known as El Aliso is also commonly cited and often referred to synonymously with that of Yaanga. The tree is visible in early photographs and plotted on plat maps showing the vineyard and winery established by Louis Vignes. A memorial plaque was recently placed to commemorate Yaanga and its location—on the north side of Commercial Street near the intersection with Vignes Street, approximately 1.97 km (1.22 miles) north of the Development Area. The location was chosen based on proximity to the place where El Aliso had once grown, which was in what is now in the channel excavated for the Hollywood Freeway.

Mission and Rancho Period (1769–1848)

Although Spanish, Russian, and British explorers visited the area for brief periods between 1529 and 1769, the Mission period in California begins with the establishment in 1769 of a settlement at San Diego by the Spanish and the founding of Mission San Diego de Alcalá. Independence from Spain in 1821 marks the beginning of the Mexican era of governance within California, and the signing of the Treaty of Guadalupe Hidalgo in 1848, ending the Mexican-American War, signals the beginning of the American period, when California became a territory of the United States.

Spanish explorers made sailing expeditions along the coast of southern California between the mid-1500s and mid-1700s. In search of the legendary Northwest Passage, Juan Rodríquez Cabrillo stopped in 1542 at present-day San Diego Bay. With his crew, Cabrillo explored the shorelines of present Catalina Island as well as San Pedro and Santa Monica bays. Much of the present California and Oregon coastline was mapped and recorded in the next half-century by Spanish naval officer Sebastián Vizcaíno. Vizcaíno's crew also landed on Santa Catalina Island and at San Pedro and Santa Monica bays, giving each location its long-standing name. The Spanish crown laid claim to California based on the surveys conducted by Cabrillo and Vizcaíno (Bancroft 1886:96–99; Gumprecht 2001:35).

More than 200 years passed before Spain began the colonization and inland exploration of Alta California. The 1769 overland expedition by Captain Gaspar de Portolá marks the beginning of California's Mission period, occurring just after the King of Spain installed the Franciscan Order to direct religious and colonization matters in assigned territories of the Americas. With a band of 64 soldiers, missionaries, Baja (lower) California Native Americans, and Mexican civilians, Portolá established the Presidio of San Diego, a fortified military outpost, as the first Spanish settlement in Alta California. In July 1769, while Portolá was exploring southern California, Franciscan Fr. Junípero Serra founded Mission San Diego de Alcalá at Presidio Hill, the first of the 21 missions that would be established in Alta California by the Spanish and the Franciscan Order between 1769 and 1823.

The Portolá expedition first reached the present-day boundaries of Los Angeles in August 1769, thereby becoming the first Europeans to visit the area. Father Juan Crespí, a member of the expedition, named the campsite by the river Nuestra Señora la Reina de los Angeles de la Porciúncula or "Our Lady the Queen of the Angels of the Porciúncula." Two years later, Fr. Junípero Serra returned to the valley to establish a Catholic mission, the Mission San Gabriel Arcángel, on September 8, 1771 (Engelhardt 1927). In 1781, a group of 11 Mexican families traveled from Mission San Gabriel Arcángel to establish a new pueblo called El Pueblo de la Reyna de Los Angeles ("the Pueblo of the Queen of the Angels"). This settlement consisted of a small group of adobe-brick houses and streets and would eventually be known as the Ciudad de Los Angeles ("City of Angels").

A major emphasis during the Mission period in California was the construction of missions and associated presidios to integrate the Native American population into Christianity and communal enterprise. Incentives were also provided to bring settlers to pueblos or towns, but just three pueblos were established during the Mission period, only two of which were successful and remain as California cities (San José and Los Angeles). Several factors kept growth within Alta California to a minimum, including the threat of foreign invasion, political dissatisfaction, and unrest among the indigenous population. After more than a decade of intermittent rebellion and warfare, New Spain (Mexico and the California territory) won independence from Spain in 1821. In 1822, the Mexican legislative body in California ended isolationist policies designed to protect the Spanish monopoly on trade, and decreed California ports open to foreign merchants. The authority of the California missions gradually declined, culminating in their secularization by the central Mexican government in 1833 and by the Alta California legislature in 1834.

Extensive land grants were established in the interior during the Mission period, in part to increase the population inland from the more settled coastal areas where the Spanish had first concentrated their colonization efforts. The secularization of the missions following Mexico's independence from Spain resulted in the subdivision of former mission lands and establishment of many additional ranchos. The Development Area is within the original boundaries of the Pueblo of Los Angeles which was founded during the era of Mexican governance in 1781.

During the Rancho period (1834–1848), landowners largely focused on the cattle industry and devoted large tracts to grazing. Cattle hides became a primary southern California export, providing a commodity to trade for goods from the east and other areas in the United States and Mexico. The number of non-Native inhabitants increased during this period because of the influx of explorers, trappers, and ranchers associated with the land grants. The rising California population contributed to the introduction and rise of diseases foreign to the Native American population, who had no associated immunities.

American Period (1848–Present)

War in 1846 between Mexico and the United States began at the Battle of Chino, a clash between resident Californios and Americans in the San Bernardino area. This battle was a defeat for the Americans and bolstered the Californios' resolve against American rule, emboldening them to continue the offensive in later battles at Dominguez Field and in San Gabriel (Beattie 1942). However, this early skirmish was not a sign of things to come, and the Americans were ultimately the victors of this 2-year war. The Mexican-American War officially ended with the Treaty of Guadalupe Hidalgo in 1848, which resulted in the annexation of California and much of the present-day southwest, ushering California into its American period.

California officially became a state with the Compromise of 1850, which also designated Utah and New Mexico (with present-day Arizona) as U.S. territories. Horticulture and livestock, based primarily on cattle as the currency and staple of the rancho system, continued to dominate the southern California economy through 1850s. The Gold Rush began in 1848; with the influx of people seeking gold, cattle were no longer desired mainly for their hides, but as a source of meat and other goods. During the 1850s cattle boom, rancho vaqueros drove large herds from southern to northern California to feed that region's burgeoning mining and commercial boom. Cattle were at first driven along major trails or roads such as the Gila Trail or Southern Overland Trail, but then were transported by trains when available. The cattle boom ended for southern California as neighboring states and territories drove herds to northern California at reduced prices. Operation of the huge ranchos became increasingly difficult, and droughts severely reduced their productivity (Cleland 1941).

Los Angeles: From Pueblo to City

On September 4, 1781, 44 settlers from Sonora, Mexico, accompanied by the governor, soldiers, mission priests, and several Native Americans, arrived at a site along the Rio de Porciúncula (later renamed the Los Angeles River), which was officially declared El Pueblo de Nuestra Señora de los Angeles de Porciúncula, or the Town of Our Lady of the Angels of Porciúncula (Robinson 1979:238; Ríos-Bustamante 1992; Weber 1980). The site chosen for the new pueblo was elevated on a broad terrace 0.8 km (0.5 mile) west of the river (Gumprecht 2001). By 1786, the area's abundant resources allowed the pueblo to attain self-sufficiency, and funding by the Spanish government ceased.

Efforts to develop ecclesiastical property in the pueblo began as early as 1784 with the construction of a small chapel northwest of the plaza. Though little is known about this building, it was located at the pueblo's original central square near the corner of present-day Cesar Chavez Avenue and North Broadway (Newcomb 1980:67–68; Owen 1960:7). Following continued flooding, however, the pueblo was relocated to its current location on higher ground, and the new town plaza (Los Angeles Plaza) soon emerged. The reconstructed church was known as "La Iglesia de Nuestra Señora la Reina de Los Angeles" (Plaza Church).

Alta California became a state in 1821, and the town slowly grew as the removal of economic restrictions attracted settlers to Los Angeles. The population continued to expand throughout the Mexican period and on April 4, 1850, only 2 years after the Mexican-American War and 5 months prior to California earning statehood, the City was formally incorporated. Settlement of the Los Angeles region continued steadily throughout the Early American period. At that time, the city was bordered on the north by the Los Felis and the San Rafael Land Grants and on the south by the San Antonio Luge Land Grant. Many of the ranchos in the area now known as Los Angeles County remained intact after the United States took possession of California and ranching retained its importance through the mid-nineteenth century. In the 1860s a severe drought resulted in many of the ranchos being sold or otherwise acquired by Americans who subdivided the land into agricultural parcels or towns (Dumke 1944). Los Angeles maintained its role as a regional business center in the early American period and the transition of many former rancho lands to agriculture, as well as the development of citriculture in the late 1800s, further strengthened this status (Caughey and Caughey 1977).

The growth of Los Angeles as a regional commerce center, combined with the expansion of port facilities and railroads throughout the region, contributed to the impact of the real estate boom of the 1880s on Los Angeles which resulted in a doubling of the city's population (Caughey and Caughey 1977; Dumke 1944). By the late 1800s, government leaders recognized the need for water to sustain the growing population in the Los Angeles area. Irish immigrant William Mulholland personified the city's efforts for a stable water supply (Dumke 1944; Nadeau 1997). By 1913, the City of Los Angeles had purchased large tracts of land in the Owens Valley, and Mulholland planned and completed the construction of the 240-mile-long aqueduct that brought the valley's water to the city (Nadeau 1997).

The growth in population also resulted in an increased demand for public transportation. As the city neared the end of the nineteenth century, numerous privately owned passenger rail lines were in place. Though early lines were horse and mule drawn, they were soon replaced by cable cars in the early 1880s, and by electric cars in the late 1880s and early 1890s. Many of these early lines were subsequently consolidated into Henry E. Huntington's Los Angeles Railway Company (LARy) in 1898, which reconstructed and expanded the system into the twentieth century and became the main streetcar system for central Los Angeles, identified by their iconic "yellow cars." During this period, Huntington also developed the much larger Pacific Electric system (also known as the "red cars") to serve the greater Los Angeles area. Just as the horse-and-buggy street cars were replaced by electric cars along the same routes,

gas-powered buses (coaches) eventually served former yellow car routes. Both the red cars and LARy served Los Angeles until they were eventually discontinued in the early 1960s.

Los Angeles continued to grow outward from the city core in the twentieth century, in part due to the discovery of oil and its strategic location as a wartime port. The military presence led to the growth in the aviation and eventually aerospace industries in the city and region. Hollywood became the entertainment capital of the world through the presence of the film and television industries and continues to tenuously maintain that position. With nearly 4 million residents, Los Angeles is the second largest city in the United States (by population), and it remains a city with worldwide influence that continues to struggle with its population's growth and needs.

DOWNTOWN LOS ANGELES

The Development Area is in the northern portion of downtown Los Angeles, and south of the historical core of the Los Angeles Pueblo. The original layout of Los Angeles Pueblo was established based on the Spanish grid system, codified as the Laws of the Indies, which required the corners of the corners of the central plaza to be oriented to the cardinal directions. As the pueblo grew, the Spanish system was increasingly adapted to fit the local topography, which was characterized by three landforms—river to the east, hills to the northwest, and the terrace between the two. These historical and topographic factors are reflected in the orientation of the early eighteenth-century street grid and the size and shape of lots depicted in Ord's (1849) map (Figure 10).

Early development of pueblo was dictated by the landform, which historically featured a bluff and steep slopes extending to the south and east, forming the periphery for the pueblo's core elements consisting of the Los Angeles Plaza, Plaza Church, and other civic and commercial buildings (Dietler and Treffers 2012). On top of the alluvial terrace and extending into the base of the foothills were the residential areas that expanded north and south from the historical core (see Figure 10). The land to the north of the Plaza and Plaza Church was one of the first areas to be settled and was known throughout much of the nineteenth century as "Sonora Town" (Deverell 2004). This adobe neighborhood was settled primarily by Mexicans from Sonora, although there were also many immigrants from Europe and the United States, many of whom became Mexican citizens at the time (Estrada 2008:10).

In the early period of the Los Angeles Pueblo and most of the eighteenth century, agricultural fields were established in the floodplain west of the Los Angeles River and beneath the terrace. Here meandering roads and fences made from hedges and wooden poles delineate the fields that Ord recorded as either plowed fields, corn, or vineyards. Farms varied in size and shape, ranging up to approximately 50 acres, and were irrigated through zanjas and other unnamed ditches, many of which are captured on Ord's 1849 map. The Development Area is situated in one of the former agricultural fields depicted in Ord's map (see Figure 10).

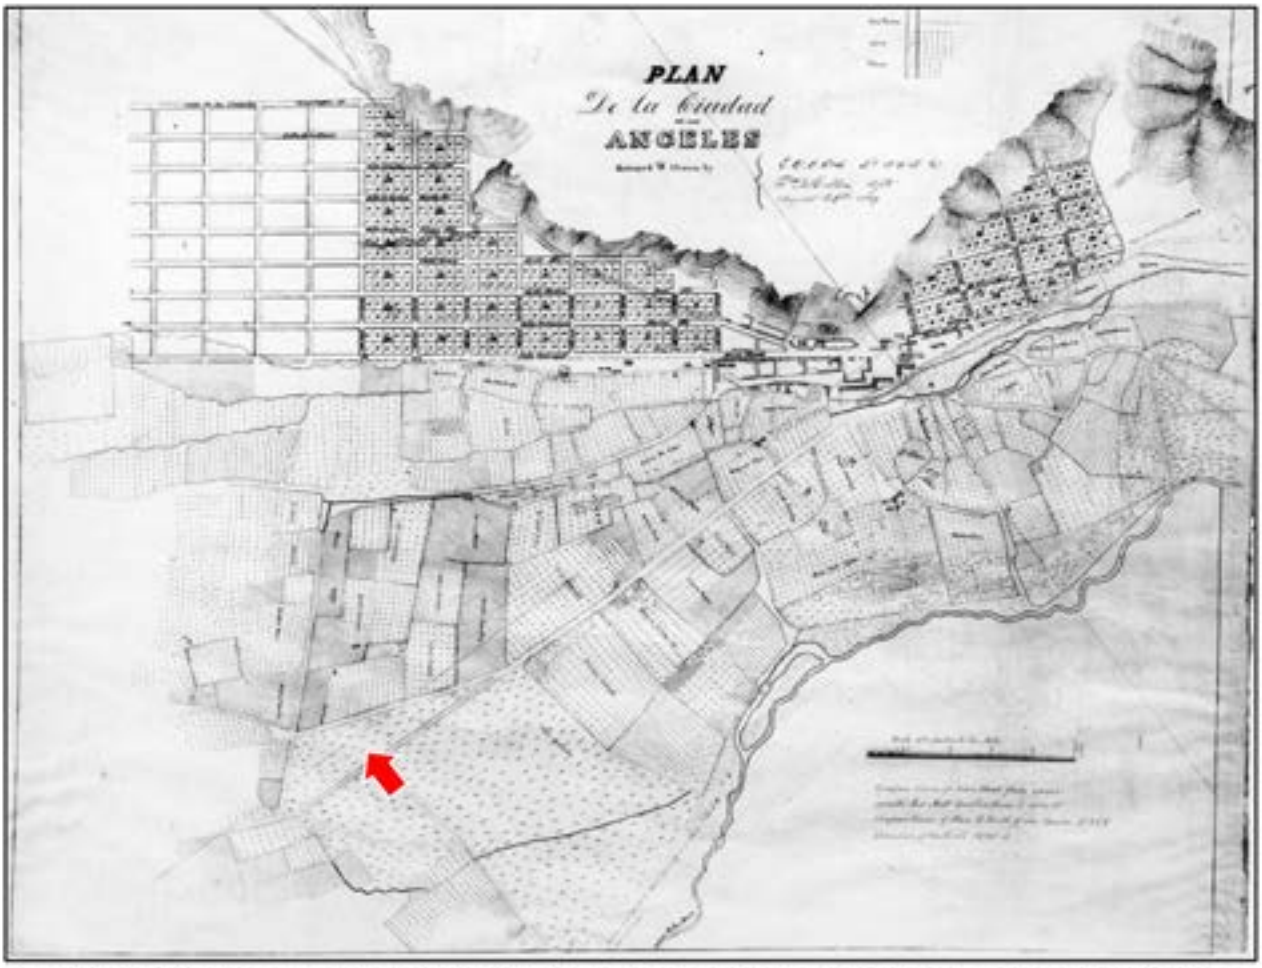

Figure 10. Photographic reprint of E.O.C. Ord's original 1849 map of the City, annotated with street names, lot owners, and block numbers (Ord 1849). The top of the map is oriented to the northwest, reflecting the original orientation of the city's layout based on the Spanish system. The red arrow indicates the approximate location of the Development Area.

The American era, beginning with the Mexican-American War, ushered in a series of massive transformations in the area. During the Mexican-American War the neighborhood surrounding the Los Angeles Plaza was the site of major battles (Estrada 2008:10). The Americans memorialized these battles when they renamed the abutting hill after Fort Moore, a U.S. military fortification constructed in 1847 during the Mexican-American War (Cortelyou 1949:17–21). During this period, the City's population grew substantially, due in part to the settlers from the east coming after the Mexican-American War and to the Gold Rush (Estrada 2008). The newcomers to the city led to significant expansion primarily to the north and southwest. Fort Moore was abandoned following the signing of the Treaty of Guadalupe Hidalgo in 1848 and eventually decommissioned in 1853. That same year, Los Angeles' non-Catholic settlers established an unofficial cemetery. The cemetery was known by several names, including City Cemetery, Fort Hill Cemetery, and "the cemetery on the hill," and functioned in an informal manner over the subsequent decade (Gibson and Dietler 2012). However, by the early 1860s, the public became concerned with its overcrowding, prompting the City to take control of the land and eventually ban future burials in 1879 (Carpenter 1973).

Los Angeles underwent another population boom in the 1880s coinciding with the arrival of the transcontinental railroad. The increase in population resulted in an increased demand for housing and the

development of new residential neighborhoods away from the city center. In response to the subsequent land boom, the City parceled out residential lots around the cemetery as early as 1884, with no initial effort to remove the burials. Fort Moore Hill soon became one of the premier residential neighborhoods due to its views and location above the city center (Cortelyou 1949:17–21; Gibson and Dietler 2012). The 1880s population boom resulted quickly in the subdivision of the farms on the lower terrace into lots that were sold for primarily residential and commercial purposes.

THE ZANJAS OF LOS ANGELES: A BRIEF HISTORY

From Los Angeles' beginnings as a small pueblo, water was understood as a crucial force to control and use if the settlement was to survive. Since the 1770s, a canal known as the Zanja Madre had been diverting water from the Los Angeles River to the newly established pueblo. The pueblo's residents used this water for ranching, agriculture, drinking, bathing, and washing clothes (Newmark and Newmark 1970). Gravity was sufficient to force the water down the zanja onto the pueblo lands, but the flow of water was not smooth and continuous because the flow of water was frequently impeded by debris and the ditch was often damaged during heavy rainfall. At this time, the maintenance of the zanja was the responsibility of all residents of the pueblo. The ayuntamiento, or town hall, came to the decision that one person had to be in charge of ensuring the functionality of the zanja and to regularly inspect it. To this aim, the ayuntamiento appointed a rotating position known as the zanjero, whose job was to properly inspect, maintain, and coordinate repairs of the zanja. Every week a new City official would be in charge of the zanjas, and every head of household was required to contribute some share, be it money or labor, to the maintenance of the zanjas, though many simply supplied Gabrielino labor to fulfill their contribution (Gumprecht 2001:60; Hoffman and Stern 2007:3).

Los Angeles residents were still using the publicly owned zanjas after California's entrance into the union, and by this time, the roles and duties of the zanjero had ballooned to include issuing permits, overseeing deputy zanjeros, and collecting fees. Because the position had become so important, Mayor Stephen Foster established a permanent zanjero position, eliminating the rotating schedule that was used during the Spanish and Mexican periods, and providing stability to the office. The position quickly became one of the most important appointed positions in Los Angeles (Gumprecht 2001:60). At the time property owners were still "required to contribute a certain amount of time" to devote to maintaining the zanja, underlying the importance of the zanja system to the young city (Gumprecht 2001:60). Though the duties and importance of the zanjeros changed over time, the importance of Native American labor in the pueblo's functioning remained constant from the Mission period and into the American period. Not only did Native American laborers make up most farm labor, but also they were often tasked with fixing the zanjas (Hoffman and Stern 2007:3–4).

As the budding city grew, new zanjas needed to be built to irrigate increasingly more farmlands. In 1857 the first offshoot was completed—Zanja No. 1, which ran between Alameda Street and the Los Angeles River. By 1870 there were a total of eight zanjas covering approximately 80 km (50 miles) that connected to the Zanja Madre. At this early time, the zanjas were little more than earthen ditches; none was covered or lined, allowing residents to easily steal water. From these humble beginnings came an extensive water conveyance system that supplied water for personal use and irrigation to the growing city. Using archival research and historic sources, Gumprecht (2001) created a map of the entire zanja system in 1880 showing the original Zanja Madre, the eight initial offshoots, and the additional zanjas that had been added (Figure 11).

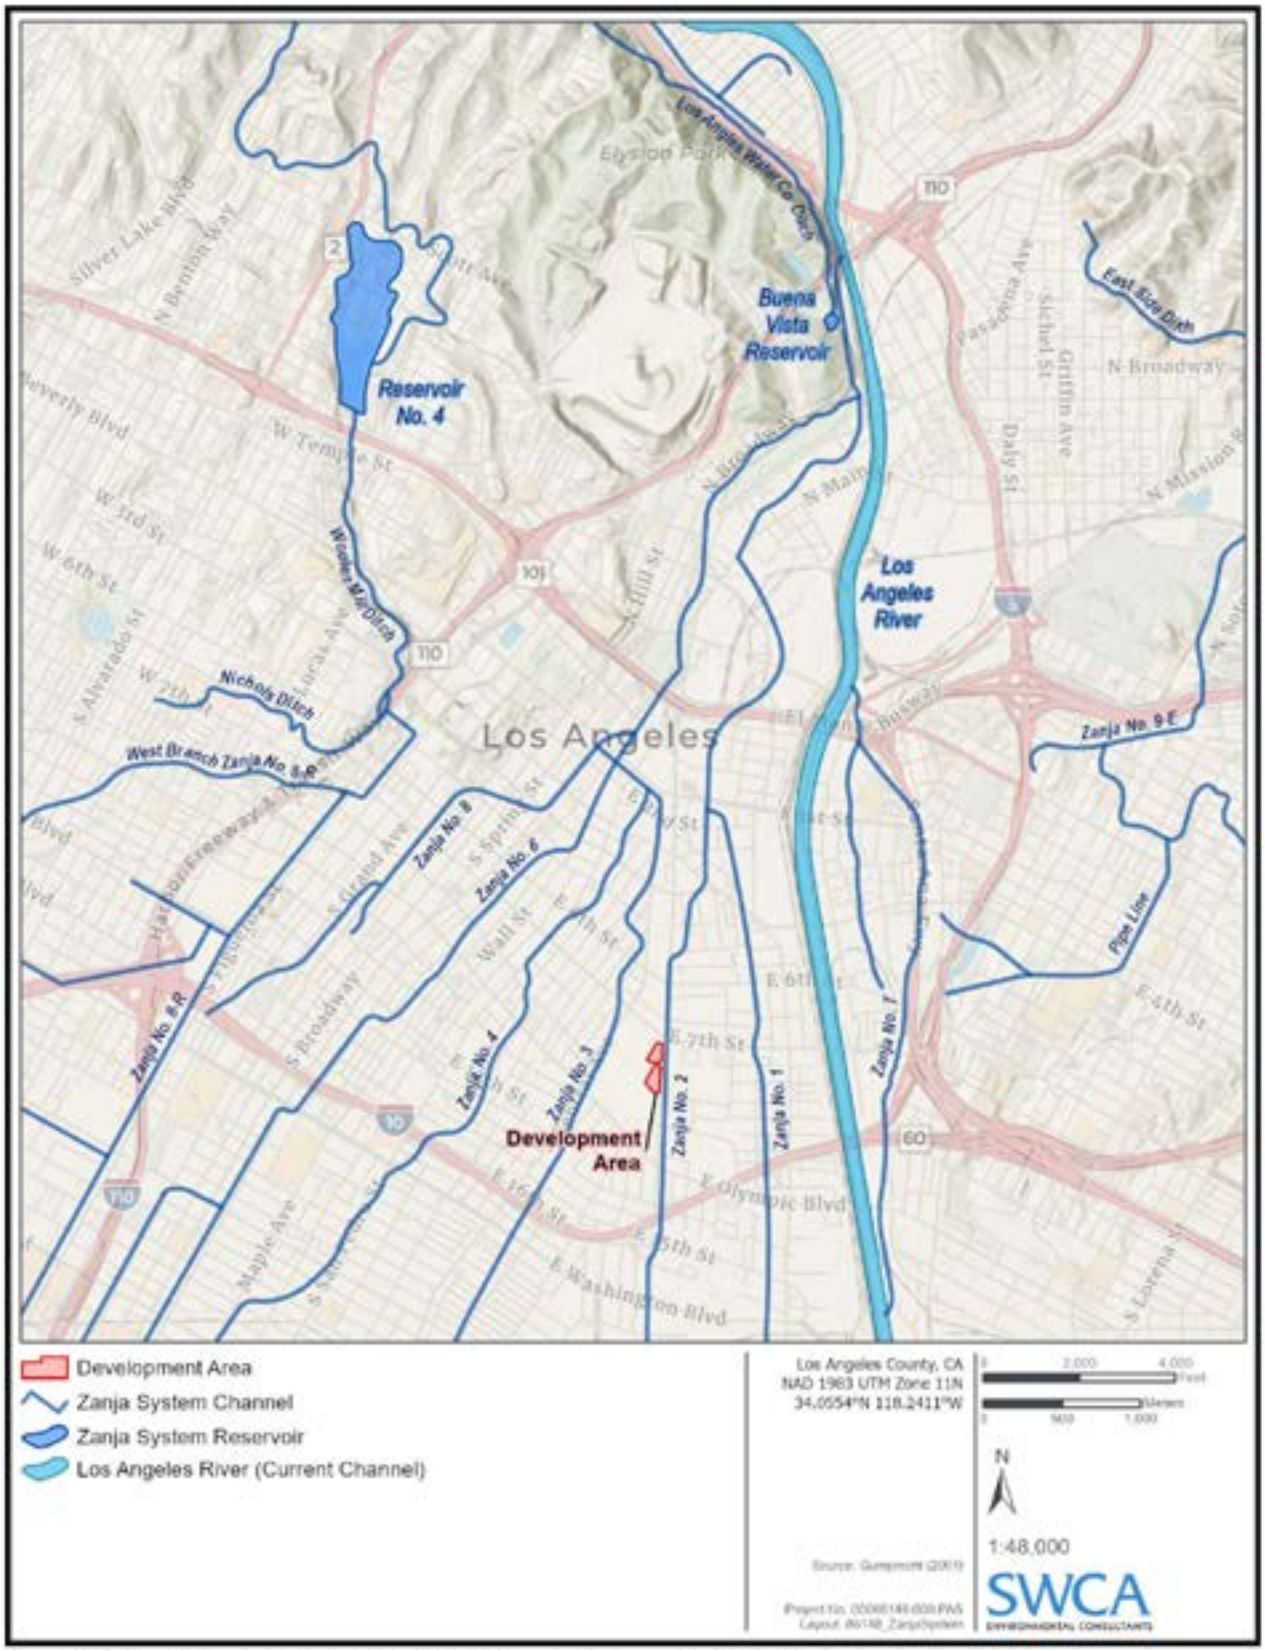

Figure 11. Los Angeles zanja system, ca. 1880s (Gumprecht 2001).

Though the zanjas were a crucial water supply in early Los Angeles, they also served as waste disposal and a sewer system for early residents (Sklar 2008:19). Dead animals were frequently found in the zanjas and, in some cases, even deceased people. Not surprisingly, dysentery during this period was common. Despite the public knowledge that the zanja water was unsanitary, people continued bathing, washing, and dumping in the zanjas. Over time, the city attempted to stop the constant bathing and washing in the main zanja; however, even after a law was passed explicitly prohibiting "bathing, washing clothes, dumping refuse, and the slaughter of cattle in the zanjas," all practices remained commonplace (Gumprecht 2001:62).

As time went on, many of the zanjas began to be upgraded from their original open ditches to more permanent structures. This first happened in 1877, when the City created its first comprehensive plan to improve and extend the zanjas using a bond measure of $75,000. Sometime during this period, many of the original zanjas were upgraded to cement or wrought iron pipe. Useful in determining the status of each zanja during this period is Hall's 1888 study on irrigation in California. In this work, Hall describes each zanja segment, providing information on construction type and length. Hall used the terms "low service" and "high service" to reference locations where the zanja diverted water from the Los Angeles River, and he separated the city's irrigation works into east and west districts according to their location with respect to the river.

The expanding system became a network of channels, structures, and reservoirs constructed using varied materials and techniques, much of which were improvised and expedient, giving the system as a whole a patchwork appearance. By 1888 nearly 50 percent of the zanjas in Los Angeles were made of some type of conduit constructed of wooden flumes, cement- or masonry-lined canals, cement and iron pipe, or brick culverts (Hall 1888:545). In one section of Hall's report, he estimates the cost of the zanja system to date, and his explanation for the difficulty of such a task provides important information on the materials and integrity of the various segments:

> The difficulty of arriving at the original cost of works, constructed by 'piecemeal,' in a period of twelve years, under no definite plan, and supervised by successive city officials (and this refers only to the works regarded as permanent and not to the long-built earthen ditches) changes almost every year, without any system of keeping accounts of construction segregated from ordinary maintenance expense, can scarcely be appreciated until one attempts the task. Much of the work has been done several times over; ditches have been flumed, and after a time the flumes replaced with pipe; pipe-lines have been, locally but radially, altered and enlarged; iron pipe substituted for cement pipe, and vice versa; and no small part of the work has been abandoned and fallen into disuse. (Hall 1888:547–548)

Many projects to improve the system, such as constructing a tunnel to replace part of the Zanja Madre, were started but never completed (Hall 1888:565). Though the zanjas were improved greatly between 1870 and 1888, when Hall conducted his study, the water system in Los Angeles was crude and not in keeping with the rapid development occurring. The last 20 years of the nineteenth century brought many changes to Los Angeles; the real estate boom of the 1880s created a fivefold population increase in the city by 1890. This population increase had the added result of decreasing the City's irrigation needs, because many of the original vineyards and orchards had already been abandoned but increasing the City's domestic water needs (Hoffman and Stern 2007:19). Two years after Hall's 1888 survey, the zanjas began to be abandoned, starting first with Zanja No. 5. Slowly, property owners began requesting that zanjas be abandoned, as the unused structures now served as impediments to development (Gumprecht 2001:89). By 1904, all the zanjas had been abandoned; most were filled in, but some continued to be used as sewers (Hoffman and Stern 2007:19).

As shown on Figure 11, the present-day location of the Development Area was between two zanjas: Zanja No. 2 and Zanja No. 3. The segment closest to the Development Area was Zanja No. 2, which extended from the end of Zanja 6-1 at 1st Street between Alameda Street and Virginia Street and ran approximately 13,200 feet down Alameda Street, directly to the east of the Development Area, until reaching 22nd Street (Hall 1888:543–545; Layne 1957:23). Hall describes Zanja No. 2 as a flume box which measured 3 feet wide × 1 foot deep (Hall 1888:545). Zanja No. 3 extended south from the end of the Zanja Madre at Central Avenue between 1st and 2nd Street until reaching 27th Street. Zanja No. 3 is mapped approximately 127 m (415 feet) to the west of the Development Area. According to Hall (1888:546), Zanja No. 3 ran for 12,750 feet, including 4,800 feet of open ditch from 1st to 7th Streets. The remainder of the zanja included 3,200 feet of cement pipe from 7th Street to 12th Street, and an open ditch again running from 12th Street for another 4,700 feet to the City boundary. Zanja No. 3 provided water to several vineyards and orchards, including the lands of prominent Angelenos such as Isidro Reyes, Antonio Coronel, William Wolfskill, and George Dalton (Layne 1952:22).

RESULTS

CHRIS Records Search

Previously Conducted Studies

SWCA received the results of the CHRIS records search from the SCCIC on February 8, 2023. Results of the records search indicate that 29 cultural resources studies have been conducted in and within 0.8 km (0.5 mile) of the Development Area, one of which intersects the Development Area (Table 1). The overlapping report is a 2007 architectural history report on the Los Angeles Wholesale Terminal, where the Project is located. Appendix A includes a confidential records search results map depicting previous cultural resources studies within 0.8 km (0.5 mile) of the Development Area.

Previously Recorded Archaeological Resources

The CHRIS records search identified one archaeological resource outside the Development Area. The resource is a historical archaeological site (LAN-4460H) recorded approximately 0.6 km (0.4 miles) to the northwest of the Development Area. This site included trash scatters and various features associated with the foundations of former buildings occupied in the mid to late nineteenth century. Appendix A includes a confidential records search results map depicting previously recorded resources within 0.8 km (0.5 mile) of the Development Area.

NATIVE AMERICAN SITES IN DOWNTOWN LOS ANGELES

There are five sites recorded within downtown Los Angeles area that have Native Americans associations, they are between 1.25 and 1.75 miles from the Development Area, which is outside the 0.5-mile records search radius used for the CHRIS records search. Given that these sites were not identified in the CHRIS records search, they are briefly mentioned below to provide a more complete characterization of the Native American archaeological record in the downtown Los Angeles area. The five sites include the following: a major Native American settlement containing multiple human burials (LAN-1575/H); an isolated bone from a Native American who lived more than 3000 years ago (LAN-4662); two sites (LAN-7/H and P-19-100515) containing a small number of artifacts that could be associated with Native American activities; and the Los Angeles Plaza Cemetery site (LAN-4218H), which historical records document as having individuals of Spanish, Mexican, Native American, and varied heritage buried in the cemetery. The location of these sites is shown on a confidential map included in Appendix A.

NON-ARCHAEOLOGICAL RESOURCES

Notably, the Project Site includes an industrial complex historically called the Los Angeles Union Wholesale Terminal, previously owned by the Southern Pacific Railroad (SPRR), which currently encompasses a total of eight buildings, including seven large industrial buildings that were constructed between 1917 and 1923 (collectively the "District"); there is also an extant parking garage constructed in 2016 that is excluded from the District. The District was formally determined eligible for the NRHP in 1997 through the Section 106 review process and is thereby also included in the CRHR. There are no archaeological resources associated with the District and SWCA's CHRIS records search omitted non-archaeological resources, but the presence is noted because of its relevance to the land-use history vis a vis industrial uses of the same period as the District. The District and the Project's impacts to the District are analyzed in a separate technical report (ARG 2024).

Sacred Lands File Search

The NAHC transmitted the results of an SLF search in a letter dated January 19, 2024. The NAHC indicated the SLF results were positive and noted that the Gabrieleño Band of Mission Indians – Kizh Nation should be contacted for additional information. In their letter, the NAHC noted that tribes do not always record their sacred sites in the SLF, nor are they required to, so additional outreach or consultation may be necessary to determine if there are resources present that are only known by individual tribes. The NAHC's letter included an attachment with a list of 12 Native American contacts representing eight tribal organizations who may have knowledge of cultural resources in or near the Development Area study area. Appendix B includes the SLF results letters. All requests for information from California Native American tribes was conducted as part of the outreach process pursuant to MM 4.15-1(a) of the MMP from the Program EIR and the results are described below.

Archival Research

The following section summarizes the results of SWCA's archival research conducted using maps, ground and aerial photographs, illustrations, archaeological data, and other sources associated with historical land uses within and near the Development Area. Because of the proximity to mapped segments of Zanja No. 2 and Zanja No. 3, a detailed analysis of these two zanja system components is provided in the section following the summary of land-uses within the Development Area during the American period.

The plowed field mapped on Ord's 1848 plot of the City is the first documented land use for the Development Area. In the detailed view of Ord's map in Figure 12, the present-day location of the Development Area is depicted in an area mapped as agricultural fields owned by Feliz (Felix) Gallardo. Gallardo's fields are to the west of land owned by Don Antonio Francisco Coronel. Gallardo was born in Mexico in 1826 but sometime before 1848 had moved to Los Angeles. Gallardo's land was primarily used for agriculture, as referenced in the Ord map. In 1856 Gallardo was involved in a gunfight that resulted in his adversary, Jesus Dominguez, being injured. Although Dominguez avoided providing any information to the authorities, Gallardo was ultimately arrested and sentenced to a year in prison at San Quentin (Spitzzeri 2022). Gallardo does not appear to have ever returned to his land and instead moved to San Gabriel where he became a constable and then zanjero before becoming a deputy (Spitzzeri 2022). For the Development Area, it is unclear who was the historical land owner during the 1860s and 1870s; however, a real estate map prepared by Stevenson in 1884 shows the Development Area situated squarely within a property identified as Coronel's (Figure 13). The Coronels likely increased their land holdings in the period between the creation of Ord's and Stevenson's map.

Don Coronel was born in Mexico City in 1817 and moved to Los Angeles in 1834 with his father (Newmark 1954; Guinn 1902; Sanchez 1983:1). During the Mexican-American War, Coronel fought for Mexico, staying in the area after the land became U.S. territory. In 1848, shortly after the end of Mexican-American War and when the news of gold began reaching southern California, Coronel, along with a party of 30 people, rode north to search for gold (Sanchez 1983:476). Coronel stayed in northern California until 1849, after which he returned to Los Angeles. Aside from this brief sojourn north, Coronel spent his adult life in Los Angeles, devoting himself to various public offices most notably Mayor of Los Angeles from 1853 to 1856 and California State Treasurer from 1866 to 1870 (Guinn 1902). In 1873, the 56-year-old Coronel married 22-year-old Marian Williamson, a native Texan who had moved to California in 1859 when she was a child (Guinn 1902). Don Coronel had multiple houses in Los Angeles, including an adobe in Los Angeles near at the corner of Los Angeles Street and Arcadia and a home known as El Recreo near the intersection of 7th Street and Central Avenue on their agricultural fields (Figure 14). A lithograph from the 1880s depict the Coronels' agricultural fields which occupied the current Development Area as well as El Recreo (Figure 15). This lithograph is facing west toward downtown Los Angeles and depicts the Coronels' residence, which would have been near the present-day intersection of 7th Street and Central Avenue. The SPRR rail line is shown along Alameda Street, and portions of the Development Area are present on the left side of the image.

The setting of the Development Area is captured in an 1877 landscape overview of the City, illustrated as a lithograph drawn facing south from the Elysian Hills near what is now Dodger Stadium (Figure 16). At this time the area appeared in much the same way as depicted in Ord's 1849 map. Most of the land surrounding the Development Area was made up of agricultural fields interspersed with small homes. The SPRR line along Alameda Street is visible on this image, indicated by the drawing of the train on the street south of the Development Area.

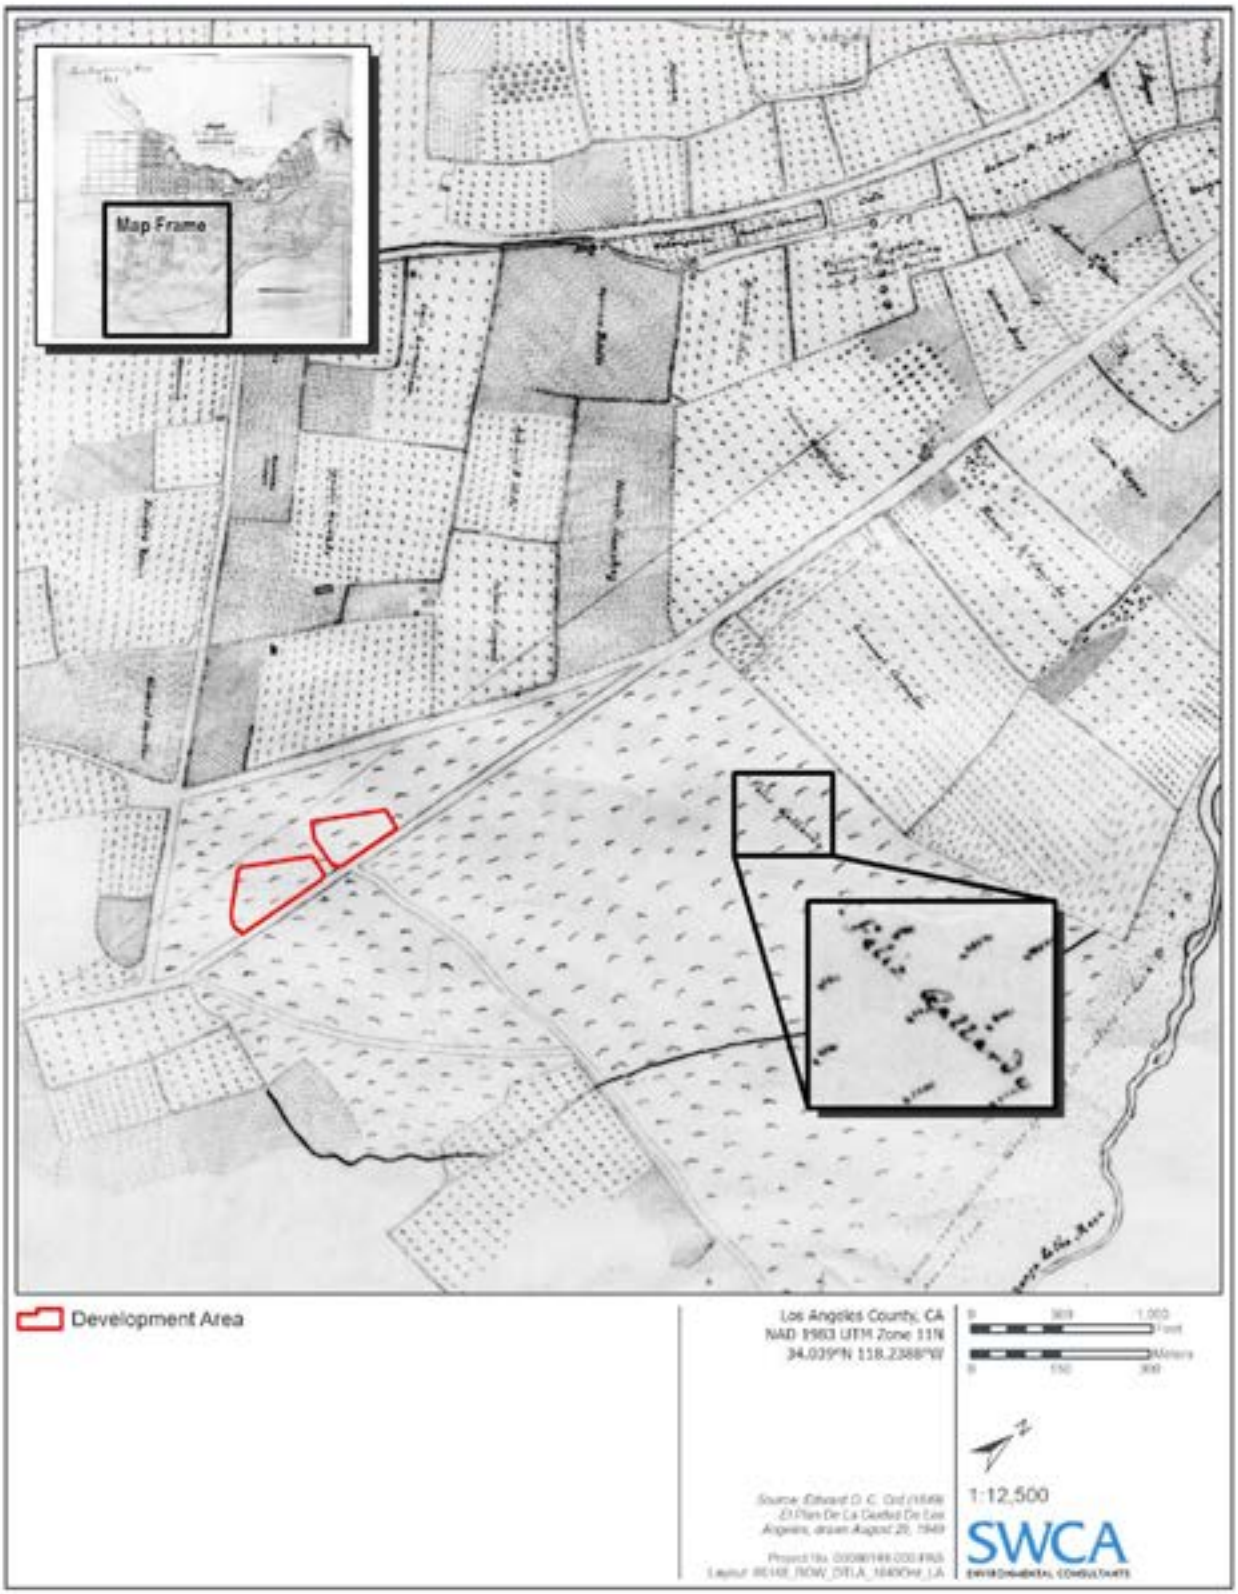

Figure 12. Detailed view of Ord's 1849 map (see inset in top left) annotated with landownership. Feliz Gallardo is identified as the owner of the larger plot (enlarged inset) which encompasses the Development Area location. The map symbology indicates that the Gallardo plot was plowed.

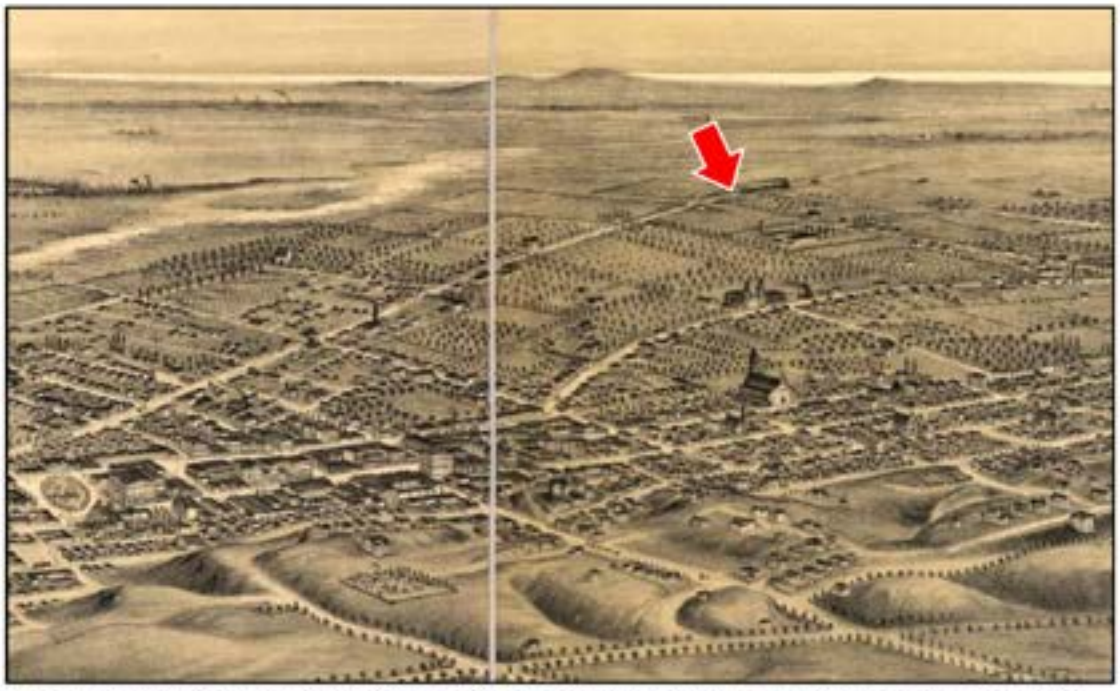

Figure 16. Detailed view of an illustration showing Los Angeles in 1877 (Source: Library of Congress, Control No. 75693093). The view is facing south with the Los Angeles Plaza visible as an oval on the bottom-left corner of the frame. The red arrow indicates the approximate location of the Development Area along Alameda Street.

The Development Area location at 7th and Alameda Streets is visible in a bird's eye view illustration from 1891 (Figure 17). The illustration captures the extent of urbanization that had expanded significantly in the 1880s. The areas north and to the west of the Development Area that once mainly consisted of agricultural fields had been increasingly replaced with residential and commercial uses. The 1891 illustration depicts a train station directly north of the Development Area, and the Development Area itself is developed with two small buildings. A similar illustration from 1894 depicts the Development Area as agricultural land or perhaps simply as a vacant lot. Both maps depict the slow growth of the commercial and industrial center south of the city's historical core. The 1894 illustration shows the Bishop Confectionery Manufacturing Company (Bishop & Company) in a lot directly north of the Development Area—at the northwest corner of 7th Street and Alameda Street (Figure 18). In addition to the Bishop & Company factory, built in 1893, the company operated several other buildings in Los Angeles by the early twentieth century, including one of the buildings within the wholesale terminal at 7th Street and Central Avenue, directly adjacent to the Development Area. Although Bishop & Company was an extremely successful business in the early twentieth century, at one point employing over 1,000 people, the impact of the Great Depression ultimately led to the company's demise, and the company was purchased by Nabisco in 1930 (Berman and Carreno 2008). By 1936, its factory at the northwest corner of 7th and Alameda Street had been demolished; however, the building within which it operated, the wholesale terminal west of the Development Area, remains to this day and has been repurposed for various commercial uses.

Sanborn maps from 1888 and 1894 do not depict the current location of the Development Area, whereas the Sanborn map from 1900 shows a portion of the Development Area location as vacant land, which suggests that the Development Area location either was used for agriculture or was simply vacant land throughout that time. The first Sanborn map that shows developments within the Development Area dates to 1906 (Figure 19). This map shows that the Development Area was a part of the Electric Railway

Company property at that time, and several buildings were present within the area, including four that were entirely or partially within the current-day Development Area boundaries. The next Sanborn Map dates to 1950 and shows that the entire Development Area had been redeveloped (Figure 20). The buildings that once existed in the Development Area and vicinity had been demolished and replaced with the large industrial warehouses that made up the wholesale terminal, many of which still exist today. Within the Development Area, one rectangular building existed in the lot north of the Development Area, and the remainder of the Development Area was used as a rail yard. Sanborn maps from the later 1950s, 1960s, and 1970 do not show any changes to the Development Area.

Aerial imagery available from 1923 onward provides more context on the development of the Development Area throughout the twentieth century. By 1923, the Development Area had begun to be used as a rail yard, and there was one rectangular building present in the lot north of the Development Area, which corresponds to the observations made during the review of Sanborn maps from the 1950s. Aerial imagery from the later 1920s through the 1970s does not show any changes to the use of the Development Area (Figure 21). The first significant change came between 1972 and 1983, when the rail yard, which was present within the Development Area for much of the twentieth century, was demolished and replaced with an at-grade parking lot. The warehouse building was still present within the lot to the north at this time; however, by 1989, this building had been demolished as well, and the space was being used for parking or storage (Figure 22). Aerial imagery from the 1990s and 2000s does not show any changes to Development Area use, although it appears that the area was repaved in the 2000s.

Zanja System Components

Ord's 1849 map of Los Angeles included many of the primary zanja segments, secondary irrigation ditches, and information on the types of crops being grown in the agricultural fields (see Figure 12). Not all the zanjas are easily distinguished on Ord's map, particularly where they were contiguous with roads, fences, and boundaries between fields and landowners, all of which could be immediately adjacent to one another and only depicted by a single line on the map. Zanja No. 2 is not discernible in Ord's map. Zanja No.3 can be identified between agricultural fields on Ord's map west of the location of the Development Area. At this time, Zanja No. 2 and Zanja No. 3 were likely constructed as simple earthen ditches and serviced the numerous agricultural fields in the southern parts of the City. Stevenson's 1884 real estate map (see Figure 13) shows Zanja No. 2 along Alameda Street in the vicinity of the Development Area and Zanja No. 3 in roughly the same location as the irrigation ditch depicted on Ord's 1849 map. Information specific to Zanja No. 2 and Zanja No. 3 is discussed in more detail below.

Zanja No. 2

No segments of Zanja No. 2 have been documented archaeologically. According to archival evidence, this segment ran down Alameda Street from 1st Street to 22nd Street in a flume box (Hall 1888:545). In 1876, a waterwheel that used water from Zanja No. 2 was constructed on Thomas Leahy's property southeast of the Development Area, on the east side of Alameda Street between 7th and 8th Streets (Figure 23). The undated photograph in Figure 23 was taken from Alameda Street, showing the waterwheel on the Leahy property. Although no segments of Zanja No. 2 have been identified archaeologically, a Sanborn Map published in 1900 depicts the zanja running as an open ditch along the northeast side of Alameda Street, opposite the Development Area (Figure 24). The subsequently published Sanborn map from 1906 shows a 10-inch water pipe in the same approximate alignment of Zanja No. 2 down Alameda Street, but it is not labeled as such. Zanja No. 2 was likely abandoned early in the twentieth century as the city began to turn away from agriculture and toward increasing its domestic water supply. Thus, all available evidence suggests that at no point was Zanja No. 2 ever aligned through the Development Area.

Figure 23. Water wheel powered by water from Zanja No. 2. The undated photograph was taken from Alameda Street showing the water wheel on the property of Thomas Leahy on the east side of Alameda Street between 7th and 8th Streets.

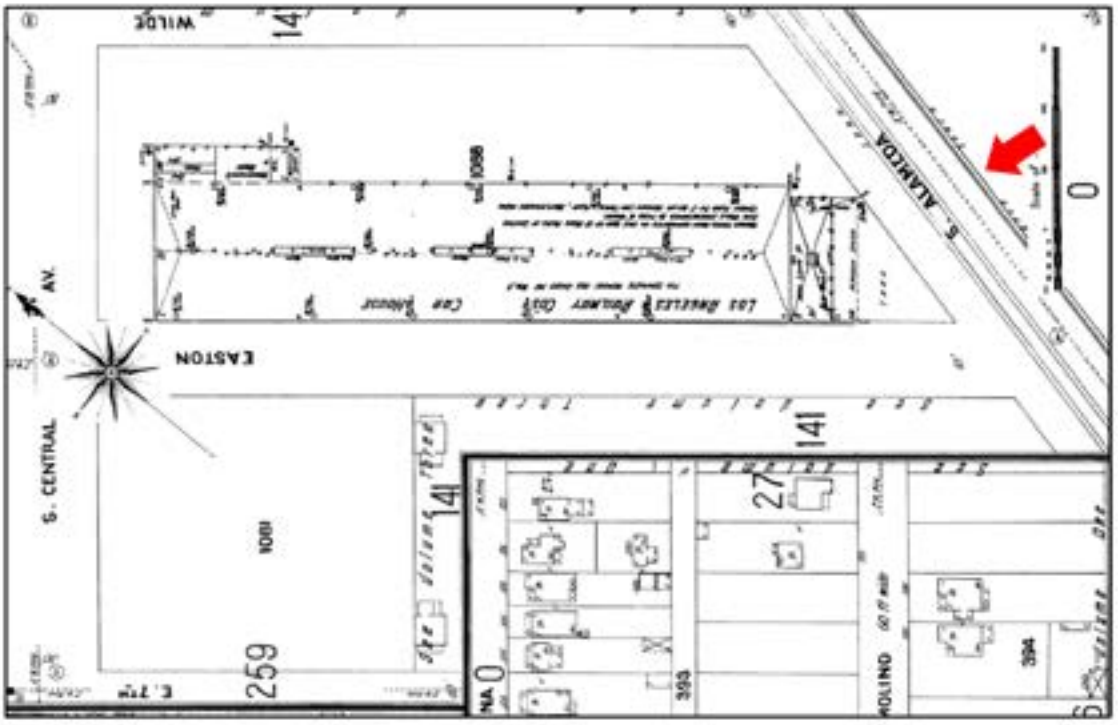

Figure 24. Sanborn published in 1900, which depicts the area north of the Development Area (not shown) and the alignment of Zanja No. 2 (red arrow), labeled "Open Zanja," on the northeast side of Alameda Street.

Zanja No. 3

Historical sources indicate that in the late 1880s, a portion of Zanja No. 3 followed Central Avenue and was constructed as a cement pipe in the segment between 7th Street and 12th Street, which is approximately 265 meters (869 feet) to the west of the Development Area. Zanja No. 3 provided water to several vineyards and orchards, including the lands of prominent Angelenos such as Isidro Reyes, Antonio Coronel, William Wolfskill, and George Dalton (Layne 1952:22). The zanja was likely abandoned by the turn of the century (Hoffman and Stern 2007:19; Louis and Berger 1986). None of the sources reviewed indicate that any portion of Zanja No. 3 crossed or bordered the Development Area.

A segment of Zanja No. 3 was recorded in 1986 by archaeologists with Louis Berger and Associates for the Federal Center Complex Project in an area bound by Aliso, Alameda, Temple, and Los Angeles Streets. Zanja No. 3 was recorded on a Historic American Engineering Record (HAER) and is on file with Library of Congress under HAER No. CA-50; Zanja No. 3 has not been given a designation in the CHRIS records. The segment of Zanja No. 3 that was recorded is approximately 2.11 km (1.3 miles) north of the Development Area. The segment was identified as part of an archaeological testing program and then more fully exposed as part of the data recovery mitigation. The archaeological recording identified a 165-foot-long portion of the original earthen ditch constructed from 1825 to 1831, measuring between 10 and 12 feet wide at the top and six feet at the base, with a depth averaging 5.6 feet below grade. A 36-foot-long brick culvert was constructed in 1869 along the portion of the ditch that crossed the original alignment of Commercial Street. Several associated features were also recovered and included public utility lines and architectural remains. The utilities included an 1869 wooden sewer, 3.5-inch-wide iron gas line, 8-inch-diameter iron water main, and concrete electrical utility trench. The associated structural remains included a brick foundation from the Los Angeles Farming and Milling Company warehouse on Commercial Street (ca. 1883) and a concrete foundation believed to be a structural element of a 1941 Post

Office parking facility. This segment is the only part of Zanja No. 3 that has been recorded archaeologically.

Archaeological Site Preservation

The archaeological preservation conditions within the Development Area are generally poor for surficial deposits, but there is higher potential for encountering subsurface deposits within the Development Area. As detailed in previous sections, historically, the Development Area was in agricultural fields owned by the Coronel family. Available evidence suggests that the area was used for agricultural purposes until the late 1880s or early 1890s. Around the turn of the century the area was developed for industrial and commercial purposes and was used primarily as a railyard for much of the twentieth century. By the end of the 1980s the warehouse building and the railyard that had existed in the Development Area since the 1920s had been demolished and replaced with a paved area used for parking and storage. It appears that the paved lot has been re-paved.

Each historical phase of land use involved physical alterations to the near-surface setting of the Development Area. These changes occurred in a sequence wherein each successive alteration would have influenced the preservation conditions for any archaeological materials that may have been deposited on or below the surface during the prior period of use. These physical alterations may have completely removed any physical evidence of the prior land uses or resulted in those materials and the sediments in which they were embedded becoming intermixed. Agricultural land uses from the Mission, Rancho, and early American periods would have altered any Native American archaeological deposits that may have once existed. Industrial site uses from the early and mid-twentieth century would have altered any deposits of historical archaeological materials.

Removal and intermixing are common occurrences for archaeological deposits in urban settings of Los Angeles, but it is also possible for more deeply buried components to remain relatively intact beneath the altered surface. In other words, the physical alterations resulting from each successive period of land use may not have reached the full depth to which archaeological deposits from previous periods may have accumulated, as has been demonstrated on sites where areas have been excavated or naturally incised (e.g., streambeds), and then became backfilled with refuse. This may be done intentionally to bury trash or other waste materials but may also occur more haphazardly during the process of creating a level surface across a property, which is commonly done during demolition.

Where Native American archaeological deposits are concerned, in areas with high rates of natural deposition, artifacts and features could become deeply buried so that the historical alterations occurred well above the buried site. Site LAN-1575/H was identified during construction of the Metropolitan Water District Headquarters next to Union Station and there was an intact Gabrielino archaeological site identified beneath historical period alterations, and at shallower depths the Native American artifacts had become intermixed with nineteenth- and early twentieth-century materials. Site LAN-4662 consisted of a single 3,000-year-old long bone from a Native American individual that was recovered from 19 feet below the street grade. The bone appeared to have been part of flood deposits, which were composed of coarse-grained sands with poorly sorted and large gravels, from the Los Angeles River. These two examples were recorded between 1.3 and 1.6 mile from the Development Area, respectively.

The examples above demonstrate that Native American archaeological deposits are more likely to be identified when they occur beneath historically modified surfaces, whereas historical archaeological sites may occur anywhere within mechanically altered sediments, the creation of which resulted from the past land uses. These “mechanically altered sediments” are typically characterized as fill in a geotechnical investigation.

Group Delta conducted a geotechnical assessment of the Development Area in 2023 which included borings within the Development Area. Sediment profiles constructed from the results showed a surface stratum described as fill below the asphalt and extending up to approximately 5 feet deep. Below the fill, soils have been mapped as young alluvium (Qyf) (Bedrossian et al. 2012). Young alluvial soils present at the Development Area are Late Pleistocene and Holocene in age. Holocene soils can contain subsurface archaeological deposits, specifically intact Native American sites, whereas only the latest Pleistocene deposits have any potential to contain intact Native American archaeological materials. Sediments deposited before the latest Pleistocene are too old to contain deeply buried archaeological deposits.

Sensitivity Assessment

Native American Archaeological and Tribal Cultural Resource Sensitivity

Ethnographic sources described above have identified the Gabrielino village site of Yaanga as having been 2.25 km (1.4 miles) north of the Development Area. Numerous historic and ethnographic sources place Yaanga in the vicinity of the Pueblo of Los Angeles and what archaeological evidence is available supports the location of the village being west of the Los Angeles River. The location of such a settlement likely shifted over time due to environmental factors, such as the shifting courses of the Los Angeles River, and historical factors, such as the influx of settlers after the founding of the Pueblo of Los Angeles. The precise area that constituted the former village has never been determined archaeologically, but the best estimate based on available information indicates it likely occupied the approximate area between the location of the Metropolitan Water District Headquarters building and west to Fort Moore Hill.

CHRIS records search results did not identify any Native American archaeological resources or potential tribal cultural resources within the Development Area or in the 0.5-mile radius used to conduct the search. The nearest Native American archaeological sites to the Development Area are located over 1.6 km (1 mile) to the north and are mostly centered on the Los Angeles Plaza and Union Station and the Metropolitan Water District Headquarters (LAN-1575/H). The single bone from a Native American individual (LAN-4662) identified 19 feet below ground within Los Angeles River floodplain deposits demonstrates that deeply buried resources can occur; however, this is a very rare occurrence and compared with the volume of floodplain deposits, this one instance does not suggest that all similar deposits have a high likelihood of containing human remains. Rather, the finding at LAN-4662 indicates that the potential for human remains and Native American archaeological sites cannot be completely ruled out based strictly on depth.

The SLF search conducted for the Project was positive, although there was no indication of whether there was a specific known resource identified in the Development Area or whether the positive result indicates sensitivity because of proximity to a known site in the NAHC's confidential file. The relative proximity to LAN-1575/H, which included several Gabrielino burials, could be related to the positive results, but consultation with the Gabrieleño Band of Mission Indians – Kizh Nation would be necessary to make a conclusive determination concerning the positive SLF results.

SWCA assessed the archaeological preservation conditions within the Development Area and found that the naturally deposited alluvial sediments beneath the fill stratum are capable of containing buried Native American archaeological deposits (including potential tribal cultural resources) based on the time period in which the sedimentary unit was formed. Specifically, the underlying alluvium was characterized as young alluvium that is Late Pleistocene to Holocene in age. These deposits appear to be composed of naturally deposited alluvium accumulated as flood plain deposits from the Los Angeles River. Alluvium that is more than 12,500 years in age is too old to contain Native American materials and there is no

archaeological sensitivity. The depth at which the alluvium becomes older than 12,500 years cannot be determined from regional geological studies or sediment profiles produced from the geotechnical testing conducted for the Project. Generally, the sensitivity for Native American archaeological resources decreases with depth beneath the fill stratum, which is estimated to extend approximately 5 feet below grade. The potential for individual artifacts to be recovered from within the fill stratum cannot be ruled out, but the likelihood of intact deposits within this stratum is low.

The location of the Development Area on the edge of the floodplain of the Los Angeles River and in reasonable proximity to a known Gabrielino settlement indicates that this area was more intensively used by Native Americans in the past compared to less intensively used areas within the traditional territory. More intensively used areas are more likely to produce physical evidence of those activities that can be preserved as archaeological deposits. The historical alterations documented within the Development Area have clearly reduced the likelihood that a Native American archaeological site or potential tribal cultural resource may have once been present, but the potential for a buried site cannot be ruled out. Accordingly, SWCA finds the Development Area has moderate sensitivity for Native American archaeological resources and tribal cultural resources. This sensitivity is contained within alluvial sediments that are younger than 12,500 years in age. Sediments older than this are too old to contain Native American archaeological resources or tribal cultural resources. The sensitivity for Native American archaeological resources and tribal cultural resources is low within the fill sediments because of the historical land uses.

Historical Archaeological Sensitivity

Historical land uses within the Development Area were assessed through archival research. The pre-1870s agricultural land uses associated with the Coronel family are not activities that typically produce substantial material deposits or physical evidence. Artifacts and features associated with nineteenth century farms are not commonly found identified in archaeological assemblages in this part of Los Angeles. In contrast, materially reinforced canals (e.g., the Zanja Madre) and remains of former buildings and structures have a greater likelihood of being preserved. Review of other maps from this period do not give any indication that there were ever any buildings or structures constructed within the Development Area during the nineteenth century, and these sources also provided evidence confirming that neither of the nearest known segments of the Zanja System—Zanja No. 2 and Zanja No. 3—passed through the Development Area. The agricultural activities are noteworthy in terms of the diminished potential for Native American archaeological sites, but the likelihood of substantial historical archaeological resources from before the turn of the twentieth century is low within the Development Area.

No information was identified to confirm exactly when the agricultural fields ceased being cultivated, but available evidence suggest it was sometime around 1900. In the first decade of the twentieth century the Development Area was used for industrial purposes related to the Electric Railway Company and multiple buildings existed within the Development Area. However, by the 1920s, all these structures had been demolished and replaced with rail lines and a warehouse structure within the Development Area. These developments were associated with the development of the warehouse terminal built in the vicinity of the Development Area which included the development of the extant buildings to the west of the Development Area. There were very few changes to the Development Area until the 1980s when the existing warehouse and rail yard were demolished and replaced with a paved area used for parking and storage. The only discernible changes to the Development Area since then include the re-paving of the area.

A search of the CHRIS identified one historical archaeological site recorded within a 0.8 km (0.5 mile) radius of the Development Area. This site included trash deposits, foundations, and other features related to the mid- to late nineteenth century. The use of the Development Area as a rail yard for over 50 years suggests that if any physical materials are present within the Development Area, then they are likely

associated with this land-use history. The paving of the Development Area may have preserved underlying deposits related to these activities, such as abandoned railroad ties, nails, and tracks, which are commonly found below ground in former industrial areas. Building materials, miscellaneous pieces of refuse including glass and metal food and beverage containers, and former building foundations are also common and could be present within the Development Area. Bore logs produced as part of the geotechnical investigation conducted for the Project report pieces of brick being identified within the fill stratum at all five bore locations sampled within the Development Area. Based on these findings, SWCA finds the Development Area has high sensitivity for containing historical archaeological resources. This sensitivity is contained within sediments designated as fill, which are estimated to extend from beneath the current pavement to as much as 5 feet below grade.

Outreach to California Native American Tribes

SWCA sent notification letters on July 18, 2025, to the ten (10) tribal representatives who are on the City's list of tribes who have requested consultation under AB 52, which is periodically updated with information provided by the NAHC. One of the letters was returned as undeliverable because the addressee, Charles Alvarez of the Gabrielino-Tongva Tribe, had moved. An electronic copy of the letter was emailed on August 4, 2025.

As of November 4, 2025, one response to the notification letters had been received. The response was submitted on July 28, 2025, by the Gabrieleño Band of Mission Indians-Kizh Nation via email to SWCA. The only content included in the email was a request to provide contact information for the lead agency. SWCA replied on the same day and asked for further clarification on the nature of the request as a means of ensuring the appropriate contact was identified. No response was received to SWCA's reply but the City was contacted by the Gabrieleño Band of Mission Indians-Kizh Nation in August 2025. Through subsequent written correspondence and one conference call, the Gabrieleño Band of Mission Indians-Kizh Nation indicated they consider the Development Area to be sensitive and requested three measures. The measures include requirements for a Native American monitor during ground-disturbing activities (TCR-1), and protocols to follow in the event there is a discovery of a non-funerary/ceremonial tribal cultural resource (TCR-2) or human remains and funerary/ceremonial objects (TCR-3). No other responses to the notification letters have been received. A summary of the tribal outreach efforts is provided below in Table 2.

Table 2. Summary of Outreach to California Native American Tribes

Name, Title	Affiliation	Summary
Rudy Ortega, Tribal President	Fernandeño Tataviam Band of Mission Indians	July 21, 2025: Notification letter delivered via USPS certified mail. August 4, 2025: No response received.
Miguel Luna, THCP Director	Fernandeño Tataviam Band of Mission Indians	July 21, 2025: Notification letter delivered via USPS certified mail. August 4, 2025: No response received.
Andrew Salas, Chairperson	Gabrieleño Band of Mission Indians-Kizh Nation	July 21, 2025: Notification letter delivered via USPS certified mail. July 28, 2025: Response received via email requesting contact information for lead agency July 28, 2025: Email reply from SWCA requesting additional information on the nature of the request. August 4, 2025: No response received. August–October 2025: Email correspondence between City and tribal representative; one conference call discussing. Three mitigation measures submitted to the City.

Name, Title	Affiliation	Summary
Anthony Morales, Chairperson	Gabrieleno/Tongva San Gabriel Band of Mission Indians	July 21, 2025: Notification letter delivered via USPS certified mail. August 4, 2025: No response received.
Sandonne Goad, Chairperson	Gabrieleno/Tongva Nation	July 22, 2025: Notification letter delivered via USPS certified mail. August 5, 2025: No response received.
Robert F. Dorame, Chairperson	Gabrieleno-Tongva Indians of California Tribal Council	July 24, 2025: Notification letter delivered via USPS certified mail. August 4, 2025: No response received.
Charles Alvarez	Gabrieleno-Tongva Tribe	July 27, 2025: Notification letter attempted delivery via USPS certified mail and returned because addressee had moved. August 4, 2025: Electronic copy of the notification letter submitted via email to two email addresses, one included on the NAHC contact list and one in the City of Los Angeles list. An auto-response indicating an invalid email address was received in response to one of the two email addresses. August 4, 2025: No response received.
Donna Yocum, Chairperson	San Fernando Band of Mission Indians	July 25, 2025: Notification letter delivered via USPS certified mail. August 8, 2025: No response received.
Isaiah Vivanco, Chairperson	Soboba Band of Luiseño Indians	July 22, 2025: Notification letter delivered via USPS certified mail. August 5, 2025: No response received.
Thomas Tortez, Chairperson	Torres Martinez Desert Cahuilla Indians	July 22, 2025: Notification letter delivered via USPS certified mail. August 5, 2025: No response received.

DISCUSSION OF RESOURCE SIGNIFICANCE AND IMPACT ANALYSIS

Resource Significance

As mentioned above, no previously recorded archaeological or tribal cultural resources have been identified within or in the vicinity of the Development Area. The average estimated depth of excavation to construct the two levels of subterranean parking beneath Buildings A-B and Building C is 20 feet below grade. The excavation to the respective depths would occur across the full extent of the Project Site in the two areas. Additional excavation to a depth of approximately 28 feet below-grade would be conducted under the elevator pit and associated footings. The potential for as-yet unidentified archaeological resources within the Development Area was assessed based on available evidence and is found to be moderate for Native American archaeological deposits (including potential tribal cultural resources) and high for historical archaeological deposits.

Significance for an archaeological resource is typically found under Criterion 4 of the CRHR, but eligibility is also possible under Criteria 1 and 2 where the archaeological materials can be correlated with a historically significant event or person(s). These are considered in more detail below. Criterion 3 is generally focused on resources that are architectural or structural in nature, which are analyzed as historical resources, not archaeological or tribal cultural. While there could be rare exceptions in which an archaeological resource satisfies Criterion 3, the types of archaeological resources with any reasonable potential of existing in the Development Area are either historic-in-age refuse deposits or scatters of

Native American artifacts, neither of which are at all likely to embody distinctive characteristics in type, period, region, or method, nor are they likely to represent the work of a master or possess high artistic value. As such, a more detailed discussion of the considerations under Criterion 3 is omitted from the subsequent section.

Regardless of the specific significance criteria being considered, determining the integrity and the extent (horizontal and vertical) of any identified archaeological remains is an important component of evaluating CRHR eligibility. Information on the horizontal distribution and vertical depth of the cultural material provides baseline data about the site (e.g., size, presence or absence of subsurface components, discrete activity areas) that contribute to a determination of the site's integrity. For any archaeological site or potential tribal cultural resource to be considered significant, it must satisfy at least one of the CRHR criteria and possess retain integrity (location, design, setting, materials, workmanship, feeling, and association). The integrity of an archaeological site, particularly the elements of location, setting, and association, can be adversely impacted by disturbance from natural or anthropogenic processes.

CRHR Criteria 1 and 2. An archaeological site can be found significant where a direct association can be demonstrated with a historically significant event (Criterion 1) or person (Criterion 2). The Development Area is known to have been owned by Don Coronel, who was a significant person in the history of early Los Angeles, although it is unlikely remains associated with Don Coronel or the period during which he owned the land are present within the Development Area. Additional archival research would be required in order to assess whether any archaeological materials identified in the Development Area (if present) are significant under Criteria 1 and 2. The same integrity considerations described under Criterion 4 would equally apply when determining CRHR eligibility under Criteria 1 and 2.

CRHR Criterion 4. Properties that are significant under Criterion 4 have yielded, or have the potential to yield, information important to the history of the local area, California, or the nation. Evaluations under Criterion 4 should consider whether the archaeological data can contribute to important historic research topics. This evaluation should factor in existing documentary evidence and integrity of the archaeological remains identified.

Properties that are significant under Criterion 4 have yielded, or have the potential to yield, information important to the history of the local area, California, or the nation. The Development Area has a history of industrial uses beginning in the first decade of the twentieth century that continued to the 1980s. The most common deposits preserved within the Development Area are related to the railroad infrastructure and commercial warehouses present within the Development Area. Archaeological deposits that date to this period have the potential to contribute to our understanding of transportation, industrialization, and commerce within Los Angeles during this period.

The integrity of any deposits depends on whether surfaces or features are preserved, and on the potential for identifying and analyzing horizontal and vertical spatial patterning in past behavior. If post-depositional natural or cultural processes have disturbed the context of the artifacts, potential information can be lost or its value highly compromised. As a result, a site with poor integrity often has a diminished capacity to yield information important in history (Criterion 4). Exploring both the horizontal and vertical aspects of the site allows for an evaluation of the information potential of the site and determination of the level of disturbance, if any.

To summarize, evaluations under Criterion 4 should consider whether the archaeological data can contribute to important historic research topics, which for the Development Area could be patterns in historic settlement, demography, consumer behavior, and the nature of land use in the beginning of the twentieth century. This evaluation should factor in existing documentary evidence and integrity of the archaeological remains identified.

Unique archaeological resource. For an archaeological resource to be considered a unique archaeological resource, it must contain information needed to answer important scientific research questions of public interest, possess a unique quality such as being the oldest or best example of a resource type, or be directly associated with a scientifically recognized important historic event or person. (PRC Section 21083.2.) An archaeological site that does not meet the significance threshold for any CRHR eligibility criteria is unlikely to be considered a unique archaeological resource.

Impact Analysis

The following threshold of significance is based on the Cultural and Tribal Cultural Resources sections of the Environmental Checklist contained in Appendix G of the State CEQA Guidelines.

Archaeological Resources

A project would result in significant adverse impacts related to archaeological resources if it would:

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to state CEQA Guidelines Section 15064.5.

No previously recorded archaeological have been identified within the Development Area. At a minimum, any sediments designated as fill within the Development Area have high sensitivity for archaeological resources. Specifically, there is a potential to encounter objects associated with industrial land uses beginning around 1900 throughout the Development Area. The potential for Native American archaeological resources is characterized as being moderate within naturally deposited alluvial sediments that are Holocene in age (less than 12,500 years). The Project requires the excavation and removal of fill and underlying alluvial sediments below the current grade. If present, archaeological resources in the Development Area could yield information important in prehistory or history and thereby satisfy Criterion 4 of the CRHR. Therefore, ground disturbances from the Project could cause a substantial adverse change in the significance of an archaeological resource pursuant to CCR Section 15064.5. Accordingly, SWCA finds that the Project could result in potentially significant impacts to an archaeological resource.

Tribal Cultural Resources

A project would result in significant adverse impacts related to tribal cultural resources if it would:

a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in PRC Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

   i. Listed or eligible for listing in the CRHR, or in a local register of historical resources as defined in PRC Section 5020.1(k), or

   ii. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of PRC Section 5024.1. In applying the criteria set forth in subdivision (c) of PRC Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

No listed tribal cultural resources have been identified within the Development Area. At a minimum, any sediments designated as fill within the Development Area have low sensitivity for a tribal cultural resource. The potential for a tribal cultural resource is characterized as moderate within naturally deposited alluvial sediments that are Holocene-in-age (deposited less than 12,500 years ago). Outreach to

California Native American tribes included a conference call between the City and Gabrieleño Band of Mission Indians-Kizh Nation who indicated they consider the Development Area to be sensitive. No information was submitted by the Gabrieleño Band of Mission Indians-Kizh Nation that indicates there is a known tribal cultural resource in the Development Area, nor was any information submitted to support their sensitivity assessment.

The Project requires the excavation and removal of fill and underlying alluvial sediments below the current grade. If present, a Native American site or feature in the Development Area could yield information important in prehistory or history and thereby satisfy Criterion 4 of the CRHR; if the resource also had cultural value to a California Native American tribe, then the resource would be a tribal cultural resource. Therefore, ground disturbances from the Project could cause a substantial adverse change in the significance of a tribal resource pursuant to CCR Section 15064.5. Accordingly, SWCA finds that the Project could result in potentially significant impacts to a tribal cultural resource.

Feasibility of Preservation in Place

According to CEQA Guidelines 15126.4(b)(3), preservation in place (i.e., avoidance) is the preferred manner of treatment of a significant archaeological site, which would also apply to a tribal cultural resource that is archaeological in nature. If avoidance is not feasible, treatment may include archaeological data recovery (i.e., excavation, laboratory processing, and analysis) to obtain important information and thereby reduce potential impacts under Criterion 4 to less than significant. Architectural documentation of engineered properties may reduce potential impacts under Criterion 3 to less than significant, although there is no indication that any such resources are likely to exist within the Development Area. Treatment options for impacts to archaeological resources eligible under Criteria 1 and 2 typically require the same methodological treatment for resources found eligible under Criterion 4, potentially with more directed and extensive research and analysis components.

Preservation in place may include any of the following: planning construction to avoid archaeological sites; incorporating archaeological sites into a park, greenspace, or open space; covering the archaeological site with a layer of chemically stable soil; and deeding the site into a permanent conservation easement. There are no known, previously recorded archaeological sites identified in the Development Area; therefore, planning for avoidance is not applicable to this Project.

Archaeological sensitivity was assessed as moderate to high, which includes moderate sensitivity for tribal cultural resources. The Project design currently includes substantial amounts of excavation required for the construction of the subterranean parking lots, which very likely precludes the potential for incorporating any archaeological sites that may be discovered during construction into a park, greenspace, or open space, protecting the archaeological site under a soil stratum, or deeding the property into a conservation easement. Thus, if a previously unrecorded archaeological resource is identified within the Development Area and found to be significant, it is very unlikely that preservation in place will be a feasible form of mitigation under any of the examples listed in CEQA Guidelines. Accordingly, measures that allow for archaeological data recovery as a form of mitigative treatment are recommended in the event a previously unrecorded archaeological site is identified during construction and the resource is determined to be significant.

RECOMMENDATIONS AND CONCLUSIONS

Archaeological Resources

Given the moderate to high sensitivity for an archaeological resource within the Development Area, SWCA recommends substituting Section I of Mitigation Measure 4.4-2 of the Program EIR MMP and implementing Section J of Mitigation Measure 4.4-2 of the Program EIR MMP. Section I of Mitigation Measure 4.4-2 requires an archaeological monitor to be present during excavations and provide archaeological sensitivity training to construction personnel prior to initiating construction. This will ensure any archaeological resources that may be present are identified by qualified monitors. No other portions of Mitigation Measure 4.4-2 are recommended to reduce potentially significant impacts because the provisions apply to resources identified before Project construction.

The substitute measure maintains the same requirements in Section I of Mitigation Measure 4.4-2 and adds a provision that requires the qualified archaeologist to prepare a Monitoring Plan. The Monitoring Plan provides details on the implementation of the archaeological monitoring and worker training, as well as the inadvertent discovery protocol described in Section J of Mitigation Measure 4.4-2. Because Native American archaeological resources potentially encountered in the Project Site may also be a tribal cultural resource, SWCA recommends that the Monitoring Plan address both archaeological and tribal cultural resources by incorporating the same requirements described for the "cultural resources monitoring program (CRMP)" as defined in Mitigation Measure 4.15(a). Moreover, because the mitigation measures for each type of resource require equivalent actions to be taken, a Monitoring Plan that addresses both types of resources together will help to ensure consistency during implementation of the mitigation measures. The potential for impacts to an archaeological or tribal cultural resource is the same if the mitigation measures are implemented according to the Monitoring Plan. Thus, substituting Section I of Mitigation Measure 4.4-2 is more effective and will not cause a new significant impact.

Accordingly, SWCA finds that the substitute mitigation measure and Section J of Mitigation Measure 4.4-2 of the Program EIR MMP would reduce potentially significant impacts to archaeological resources to less-than-significant levels.

Substitute Mitigation Measure

> Prior to issuance of a grading permit and prior to the start of any ground-disturbing activity, the applicant shall retain a qualified archaeologist who meets the Secretary of the Interior's Professional Qualification Standards to oversee an archaeological monitor who shall be present during construction excavations, such as demolition, clearing/grubbing, grading, trenching, or any other construction excavation activity associated with the project, including peripheral activities, such as sidewalk replacement, utilities work, and landscaping, which may occur adjacent to the project site. The frequency of monitoring shall be based on the rate of excavation and grading activities, the materials being excavated (younger sediments vs. older sediments), the depth of excavation, and, if found, the abundance and type of archaeological resources encountered. Full-time monitoring may be reduced to part-time inspections, or ceased entirely, if determined adequate by the qualified archaeologist. Prior to commencement of excavation activities, Archaeological Sensitivity Training shall be given for construction personnel. The training session shall be carried out by the qualified archaeologist and shall focus on how to identify archaeological resources that may be encountered during earthmoving activities and the procedures to be followed in such an event.

The details of the monitoring and training shall be summarized in an Archaeological and Tribal Cultural Resources Monitoring Plan (Monitoring Plan) prepared by the qualified archaeologist, in consultation with all interested Tribes, prior to the commencement of ground disturbing activities for the project. The Monitoring Plan shall include compliance with Section J of Mitigation Measures 4.4-2 and Mitigation Measure 4.15-1(b), including the portions referring to the implementation of a Cultural Resources Monitoring Program (CRMP). The Monitoring Plan will provide details regarding the process for infield treatment of inadvertent discoveries of archaeological and tribal cultural resources and the disposition of inadvertently discovered non-funerary resources, and shall be consistent with the treatment of unique archaeological resources in PRC Section 21083.2.

Program EIR Mitigation Measure

Mitigation Measure 4.4-2. Archaeological Resources

J. In the event that historic (e.g., bottles, foundations, refuse dumps/privies, railroads, etc.) or prehistoric (e.g., hearths, burials, stone tools, shell and faunal bone remains, etc.) archaeological resources are unearthed, ground-disturbing activities shall be halted or diverted away from the vicinity of the find so that the find can be evaluated. A 50-foot buffer within which construction activities shall not be allowed to continue shall be established by the qualified archaeologist around the find. Work shall be allowed to continue outside of the buffer area. All archaeological resources unearthed by project development activities shall be evaluated by the qualified archaeologist. If a resource is determined by the qualified archaeologist to constitute a "historical resource" pursuant to CEQA Guidelines Section 15064.5(a) or a "unique archaeological resource" pursuant to Public Resources Code Section 21083.2(g), the qualified archaeologist shall coordinate with the applicant and the City to develop a formal treatment plan that would serve to reduce impacts to the resources. The treatment plan established for the resources shall be in accordance with CEQA Guidelines Section 15064.5(f) for historical resources and Public Resources Code Sections 21083.2(b) for unique archaeological resources. Preservation in place (i.e., avoidance) is the preferred manner of treatment. If, in coordination with the City, it is determined that preservation in place is not feasible, appropriate treatment of the resource shall be developed by the qualified archaeologist in coordination with the City and may include implementation of archaeological data recovery excavations to remove the resource along with subsequent laboratory processing and analysis. Any archaeological material collected shall be curated at a public, non-profit institution with a research interest in the materials, if such an institution agrees to accept the material. If no institution accepts the archaeological material, they shall be donated to a local school, Tribe, or historical society in the area for educational purposes.

Tribal Cultural Resources

Given the sensitivity for a tribal cultural resource within portions of the Development Area, SWCA recommends substituting Mitigation Measure 4.15-1(b) of the Program EIR MMP. Mitigation Measure 4.15-1(b) outlines a process to be followed in the event a potential tribal cultural resource is discovered. The performance standards included in Mitigation Measure 4.15-1(b) are based on the following requirements: temporarily halting work within a radius of 50 feet until the discovery can be assessed by a Qualified Archaeologist and affiliated tribes; retaining a tribal monitor if a tribal cultural resource is identified; identifying appropriate treatment consistent with existing regulations and in consultation with affiliated tribes; observing confidentiality requirements concerning the discovered resource, and; allowing

for adequate documentation of scientific information when applicable. The substitute measure TRC-MM-1 includes provisions that satisfy the same minimum requirements in Mitigation Measure 4.15-1(b) but adds requirements for worker training and tribal monitoring in areas with sensitivity for tribal cultural resources. The substitute measure includes elements of the three measures requested by the Gabrieleño Band of Mission Indians—Kizh Nation, specifically the elements stipulating the requirements for and methods used by a tribal monitor during ground-disturbing activities. The other elements of the measures requested by the Gabrieleño Band of Mission Indians—Kizh Nation are addressed in the other provisions of the substitute measure based on the minimum requirements incorporated from Mitigation Measure 4.15-1(b), such as requirements for tribal consultation while assessing potential tribal cultural resources and identifying appropriate forms of treatment for confirmed resources. The substitute measure also incorporates additional details to clarify the performance standards and ensure compliance with existing regulations, conformance with industry standards and best practices, and compatibility with other mitigation measures for the Project, specifically those for archaeological resources.

The substitute mitigation measure and Section J of Mitigation Measure 4.4-2 require an archaeological monitor to be present during excavations, provide archaeological sensitivity training to construction personnel prior to initiating construction, and then follow an archaeological resource discovery protocol. Details on these procedures would be described in a Monitoring Plan that SWCA recommends be included as part of the substitute measure. The provisions in these measures would apply to a Native American site, feature, or object that may also be a tribal cultural resource. Implementation of substitute measure TCR-MM-1 would ensure that any potential tribal cultural resources discovered during Project activities would be assessed as a tribal cultural resource and subject to appropriate forms of treatment. Specific procedures to implement the inadvertent discovery protocol would already be included in the Monitoring Plan, which would function in the same capacity as and incorporate all performance standards as the CRMP defined in Mitigation Measure 4.15-1(b).

By maintaining the same minimum requirements in Mitigation Measure 4.15-1(b) and adding requirement to conduct tribal monitoring, consistent with the sensitivity assessment and measures requested by the Gabrieleño Band of Mission Indians—Kizh Nation, the substitute mitigation measure TCR-MM-1 is more effective and will not cause a new significant impact to tribal cultural resources. Accordingly, when implemented in conjunction with the substitute measure and Section J of Mitigation Measure 4.4-2, SWCA finds that substitute mitigation measures TCR-MM-1, would reduce potentially significant impacts to tribal cultural resources to less-than-significant levels.

Substitute Mitigation Measure

> **Mitigation Measure TCR-MM-1:** Prior to commencing any Ground Disturbance Activities at the Project Site, the Applicant, or its successor, shall retain a qualified tribal monitor from the Gabrieleño Band of Mission Indians—Kizh Nation (Tribe). Ground Disturbance Activities shall include demolition, excavating, digging, trenching, plowing, drilling, tunneling, quarrying, grading, leveling, clearing, driving posts, augering, backfilling, blasting, stripping topsoil, potholing, pavement removal, grubbing, tree removals, boring or a similar activity at the project site. Prior to the commencement of any Ground Disturbance Activities, the Applicant and the Tribe shall execute an agreement for a tribal monitor at a reasonable rate, determined in good faith, consistent with industry standards, taking into account factors such as the scope and duration of the Project and substantial evidence for the presence or absence of tribal cultural resources. If the terms of service cannot be agreed upon, or if no response is received within 10 days of soliciting a request, the Applicant may contact another California Native American tribe included on the Native American Heritage Commission's Tribal Contact List and request the services of a tribal monitor.

Prior to commencing any Ground Disturbance Activities, the tribal monitor, shall provide Worker Environmental Awareness Program (WEAP) training to construction crews involved in Ground Disturbance Activities that includes information on regulatory requirements for the protection of tribal cultural resources. As part of the WEAP training, construction crews shall be briefed on proper procedures to follow should a crew member discover tribal cultural resources during Ground Disturbance Activities. In addition, workers will be shown examples of the types of resources that would require notifying the tribal monitor. The Applicant shall maintain on the Project Site, for potential City inspection, documentation establishing the WEAP training was completed for all members of the construction crew involved in Ground Disturbance Activities.

The tribal monitor shall observe Ground Disturbance Activities on the Project Site when they are taking place in sediments capable of containing tribal cultural resources, as determined by a Qualified Archaeologist in consultation with the Tribe and supported by substantial evidence. The tribal monitor(s) will complete daily monitoring logs that will provide descriptions and locations of the relevant Ground Disturbing Activities, the type of construction activities performed, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor logs will identify and describe any discovered tribal cultural resources as defined in California Public Resources Code Section 21074. Copies of monitor logs will be provided to the project applicant and/or the City upon request to the Tribe(s). The tribal monitoring shall end when either 1) confirmation is received from the Applicant, in writing, that all scheduled activities pertaining to tribal monitoring and all Ground Disturbance Activities are completed; or 2) the Tribe(s) provides a determination, in writing and supported by substantial evidence, that no future, planned construction activity, and/or development/construction phase at the project site possesses the potential to impact any tribal cultural resources.

In the event that any objects or artifacts that may be tribal cultural resources are encountered during the course of any Ground Disturbance Activities, all such activities shall temporarily cease within the area of discovery, the radius of which shall be 50 feet or otherwise determined by the Qualified Archaeologist in consultation with the tribal monitor, until the potential tribal cultural resource is properly assessed and addressed pursuant to the process set forth below:

1. If the Qualified Archaeologist and Tribe determine the resources are Native American in origin, the Tribe will recommend steps for treatment of all discovered tribal cultural resources in the form and/or manner the Tribe deems appropriate, in the Tribe's reasonable discretion, and for any purpose the Tribe deems appropriate, including for educational, cultural and/or historic purposes.

2. The Applicant shall implement the Tribe's recommendations if the Qualified Archaeologist concludes that the Tribe's recommendations are reasonable and feasible. In addition to any recommendations from the Tribe(s), the Qualified Archaeologist shall develop a list of actions that shall be taken to avoid or minimize impacts to the identified tribal cultural resources substantially in compliance with any applicable federal, state or local law, rule or regulation, including but not limited to Public Resources Code Section 21083.2.

3. Ground Disturbance Activities may recommence outside of the specified radius of the discovery site, so long as this radius has been reviewed by both the archaeological monitor and tribal monitor(s) and determined to be reasonable and appropriate, and so long as the Applicant has complied with all of the

recommendations developed and approved pursuant to the process set forth in Paragraphs 1 and 2 above.

4. Copies of any subsequent archaeological study, tribal cultural resources study or report, detailing the nature of any significant tribal cultural resources, remedial actions taken, and disposition of any significant tribal cultural resources shall be submitted to the South Central Coastal Information Center at California State University, Fullerton and to the Native American Heritage Commission for inclusion in its Sacred Lands File.

5. Notwithstanding Paragraph 4 above, any information that Los Angeles Department of City Planning, in consultation with the Los Angeles City Attorney's Office, determines to be confidential in nature shall not be published under the applicable provisions of the Government Code Sections 7929.000 and 7929.005, and subdivision (d) of Section 15120 of Title 14 of the California Code of Regulations.

6. Archaeological and Native American monitoring and excavation during construction projects will be consistent with current professional standards. All feasible care to avoid any unnecessary disturbance, physical modification, or separation of human remains and associated funerary objects shall be taken.

Re: Row DTLA (86148) Project, Los Angeles County

Dear Ms. Nicolay:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information submitted for the above referenced project. The results were positive. Please contact the Gabrieleno Band of Mission Indians – Kizh Nation on the attached list for information. Please note that tribes do not always record their sacred sites in the SLF, nor are they required to do so. A SLF search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with a project's geographic area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites, such as the appropriate regional California Historical Research Information System (CHRIS) archaeological Information Center for the presence of recorded archaeological sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. Please contact all of those listed; if they cannot supply information, they may recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify the NAHC. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green

Re: Notification and Information Request for the ROW DTLA Residential Project, Housing Element CEQA Streamlining Checklist, City of Los Angeles, California

Project Address: 757–787 South Alameda Street, 1318–1396 East 7th Street, 736–796 South Central Avenue, 1301–1327 East 8th Street, 700–760 South Market Court, 720–746 South Terminal Street, and 760 South Warehouse Street

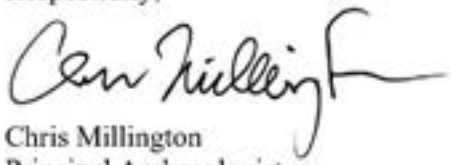
Dear Tribal Representative:

This letter is to inform you that the following proposed project is being reviewed by the Los Angeles Department of City Planning (City Planning) according to the Housing Element CEQA Streamlining Checklist (Form CP-4089):

> The ROW DTLA Residential Project (Project) involves the demolition of existing surface parking lots and the construction of two mixed-use buildings and one multi-family building in a 4.8-acre portion (the Development Area) of an approximately 30.65-acre Project Site. The Project Site is in an expansive industrialized area in the east of Downtown Los Angeles. The area surrounding the Project Site is primarily developed with warehouses, cold storage facilities, small-scale manufacturing operations, and other industrial uses, though in more recent years newer commercial office, commercial retail, and residential uses have been developed in the vicinity of the Project Site. The portion of the Project Site along Central Avenue is used as a wholesale produce market and an outdoor weekend market known as Smorgasburg. Except for 747 South Alameda Street, which is currently vacant, the middle portion of the Site between 7th and 8th Street supports retailers and restaurants and another office and hybrid office/light manufacturing tenants that span multiple industries including technology, apparel, construction, produce wholesale and consumer goods. This area also includes a ten-story concrete parking structure that was built in 2016 and is accessed via South Alameda Street. These existing uses will remain and are not being modified by the Project.
>
> The Project proposes to construct three eight-story new construction buildings, including residential units, parking, and retail and cafe space. The three new buildings—Buildings A, B, and C—would be located just north and south of Center Street, which runs east-west through the Project Site. Buildings A and B would be south of Center Street and Building C would be north of Center Street. Building A would include commercial space at the first floor, residential units at the first through eighth floors, and two levels of subterranean parking. Building B would include residential units at the first through eight floors and two levels of subterranean parking. Building C would consist of

commercial space at the first floor, residential units at the first through eighth floors, and two levels of subterranean parking. All three buildings would be surrounded by landscaping.

Ground disturbances required for the Project would occur during demolition of the existing surface parking lot and excavation for the subterranean parking and elevator pits with associated footings. These activities would be limited to a 4.8-acre area within the Project Site that is designated here as the Development Area and is located at 747–787 South Alameda Street, 1390–1396 East 7th Street, Los Angeles, California, 90021. The Development Area consists of two irregularly shaped areas and is currently developed with paved surface parking and limited ornamental vegetation. The average estimated depth of excavation to construct the two levels of subterranean parking beneath Buildings A-B and Building C is 20 feet below grade. The excavation to the respective depths would occur across the full extent of the Project Site in the two areas. Additional excavation to a depth of approximately 28 feet below-grade would be conducted under the elevator pit and associated footings.



The Los Angeles City Council certified the *Citywide Housing Element 2021-2029 and Safety Element Updates Final Environmental Impact Report* (Program EIR). The proposed Project is within the scope of the Housing Element Program analyzed in the Program EIR, and the environmental clearance for the Project is being analyzed using the Housing Element CEQA Streamlining Checklist (Form CP-4089). The City adopted a Mitigation and Monitoring Program (MMP) for the Program EIR, which describes the procedures and stipulations for implementing mitigation measures to be imposed as conditions of approval by the City on discretionary projects. Mitigation Measure (MM) 4.15-1(a) of the MMP address tribal cultural resources and defines procedures to identify resources and implement applicable impact reduction techniques to reduce substantial adverse effects.

SWCA Environmental Consultants (SWCA) is working as an agent on behalf of the Project Applicant and City. This letter is intended to notify you of the proposed Project pursuant to MM 4.15-1(a) and request any information concerning a tribal cultural resource or likelihood of a potential tribal cultural resource in the Development Area. This information request is not being conducted according to the requirements of Assembly Bill 52 (AB 52), but any information you may wish to provide will be subject to the confidentiality protections provided under Public Resources Code Section 21082.3(c), and as such, will not be included in any publicly circulated documents.

We request that you please respond within 14 calendar days of receipt of this letter to notify us if you have input or questions about the proposed Project. Please provide your contact information and send your request via U.S. mail and/or email to:

Re: Notification and Information Request for the ROW DTLA Residential Project, Housing Element CEQA Streamlining Checklist, City of Los Angeles, California

Project Address: 757–787 South Alameda Street, 1318–1396 East 7th Street, 736–796 South Central Avenue, 1301–1327 East 8th Street, 700–760 South Market Court, 720–746 South Terminal Street, and 760 South Warehouse Street

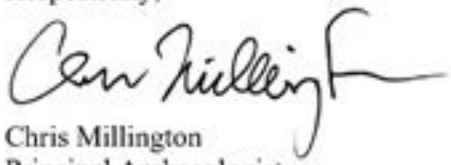
Dear Tribal Representative:

This letter is to inform you that the following proposed project is being reviewed by the Los Angeles Department of City Planning (City Planning) according to the Housing Element CEQA Streamlining Checklist (Form CP-4089):

> The ROW DTLA Residential Project (Project) involves the demolition of existing surface parking lots and the construction of two mixed-use buildings and one multi-family building in a 4.8-acre portion (the Development Area) of an approximately 30.65-acre Project Site. The Project Site is in an expansive industrialized area in the east of Downtown Los Angeles. The area surrounding the Project Site is primarily developed with warehouses, cold storage facilities, small-scale manufacturing operations, and other industrial uses, though in more recent years newer commercial office, commercial retail, and residential uses have been developed in the vicinity of the Project Site. The portion of the Project Site along Central Avenue is used as a wholesale produce market and an outdoor weekend market known as Smorgasburg. Except for 747 South Alameda Street, which is currently vacant, the middle portion of the Site between 7th and 8th Street supports retailers and restaurants and another office and hybrid office/light manufacturing tenants that span multiple industries including technology, apparel, construction, produce wholesale and consumer goods. This area also includes a ten-story concrete parking structure that was built in 2016 and is accessed via South Alameda Street. These existing uses will remain and are not being modified by the Project.
>
> The Project proposes to construct three eight-story new construction buildings, including residential units, parking, and retail and cafe space. The three new buildings—Buildings A, B, and C—would be located just north and south of Center Street, which runs east-west through the Project Site. Buildings A and B would be south of Center Street and Building C would be north of Center Street. Building A would include commercial space at the first floor, residential units at the first through eighth floors, and two levels of subterranean parking. Building B would include residential units at the first through eight floors and two levels of subterranean parking. Building C would consist of

commercial space at the first floor, residential units at the first through eighth floors, and two levels of subterranean parking. All three buildings would be surrounded by landscaping.

Ground disturbances required for the Project would occur during demolition of the existing surface parking lot and excavation for the subterranean parking and elevator pits with associated footings. These activities would be limited to a 4.8-acre area within the Project Site that is designated here as the Development Area and is located at 747–787 South Alameda Street, 1390–1396 East 7th Street, Los Angeles, California, 90021. The Development Area consists of two irregularly shaped areas and is currently developed with paved surface parking and limited ornamental vegetation. The average estimated depth of excavation to construct the two levels of subterranean parking beneath Buildings A-B and Building C is 20 feet below grade. The excavation to the respective depths would occur across the full extent of the Project Site in the two areas. Additional excavation to a depth of approximately 28 feet below-grade would be conducted under the elevator pit and associated footings.



The Los Angeles City Council certified the *Citywide Housing Element 2021-2029 and Safety Element Updates Final Environmental Impact Report* (Program EIR). The proposed Project is within the scope of the Housing Element Program analyzed in the Program EIR, and the environmental clearance for the Project is being analyzed using the Housing Element CEQA Streamlining Checklist (Form CP-4089). The City adopted a Mitigation and Monitoring Program (MMP) for the Program EIR, which describes the procedures and stipulations for implementing mitigation measures to be imposed as conditions of approval by the City on discretionary projects. Mitigation Measure (MM) 4.15-1(a) of the MMP address tribal cultural resources and defines procedures to identify resources and implement applicable impact reduction techniques to reduce substantial adverse effects.

SWCA Environmental Consultants (SWCA) is working as an agent on behalf of the Project Applicant and City. This letter is intended to notify you of the proposed Project pursuant to MM 4.15-1(a) and request any information concerning a tribal cultural resource or likelihood of a potential tribal cultural resource in the Development Area. This information request is not being conducted according to the requirements of Assembly Bill 52 (AB 52), but any information you may wish to provide will be subject to the confidentiality protections provided under Public Resources Code Section 21082.3(c), and as such, will not be included in any publicly circulated documents.

We request that you please respond within 14 calendar days of receipt of this letter to notify us if you have input or questions about the proposed Project. Please provide your contact information and send your request via U.S. mail and/or email to:

Re: Notification and Information Request for the ROW DTLA Residential Project, Housing Element CEQA Streamlining Checklist, City of Los Angeles, California

Project Address: 757–787 South Alameda Street, 1318–1396 East 7th Street, 736–796 South Central Avenue, 1301–1327 East 8th Street, 700–760 South Market Court, 720–746 South Terminal Street, and 760 South Warehouse Street

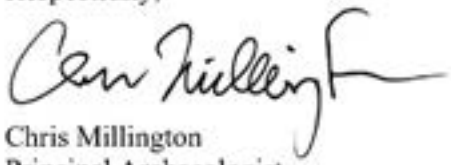
Dear Tribal Representative:

This letter is to inform you that the following proposed project is being reviewed by the Los Angeles Department of City Planning (City Planning) according to the Housing Element CEQA Streamlining Checklist (Form CP-4089):

> The ROW DTLA Residential Project (Project) involves the demolition of existing surface parking lots and the construction of two mixed-use buildings and one multi-family building in a 4.8-acre portion (the Development Area) of an approximately 30.65-acre Project Site. The Project Site is in an expansive industrialized area in the east of Downtown Los Angeles. The area surrounding the Project Site is primarily developed with warehouses, cold storage facilities, small-scale manufacturing operations, and other industrial uses, though in more recent years newer commercial office, commercial retail, and residential uses have been developed in the vicinity of the Project Site. The portion of the Project Site along Central Avenue is used as a wholesale produce market and an outdoor weekend market known as Smorgasburg. Except for 747 South Alameda Street, which is currently vacant, the middle portion of the Site between 7th and 8th Street supports retailers and restaurants and another office and hybrid office/light manufacturing tenants that span multiple industries including technology, apparel, construction, produce wholesale and consumer goods. This area also includes a ten-story concrete parking structure that was built in 2016 and is accessed via South Alameda Street. These existing uses will remain and are not being modified by the Project.
>
> The Project proposes to construct three eight-story new construction buildings, including residential units, parking, and retail and cafe space. The three new buildings—Buildings A, B, and C—would be located just north and south of Center Street, which runs east-west through the Project Site. Buildings A and B would be south of Center Street and Building C would be north of Center Street. Building A would include commercial space at the first floor, residential units at the first through eighth floors, and two levels of subterranean parking. Building B would include residential units at the first through eight floors and two levels of subterranean parking. Building C would consist of

commercial space at the first floor, residential units at the first through eighth floors, and two levels of subterranean parking. All three buildings would be surrounded by landscaping.

Ground disturbances required for the Project would occur during demolition of the existing surface parking lot and excavation for the subterranean parking and elevator pits with associated footings. These activities would be limited to a 4.8-acre area within the Project Site that is designated here as the Development Area and is located at 747–787 South Alameda Street, 1390–1396 East 7th Street, Los Angeles, California, 90021. The Development Area consists of two irregularly shaped areas and is currently developed with paved surface parking and limited ornamental vegetation. The average estimated depth of excavation to construct the two levels of subterranean parking beneath Buildings A-B and Building C is 20 feet below grade. The excavation to the respective depths would occur across the full extent of the Project Site in the two areas. Additional excavation to a depth of approximately 28 feet below-grade would be conducted under the elevator pit and associated footings.



The Los Angeles City Council certified the *Citywide Housing Element 2021-2029 and Safety Element Updates Final Environmental Impact Report* (Program EIR). The proposed Project is within the scope of the Housing Element Program analyzed in the Program EIR, and the environmental clearance for the Project is being analyzed using the Housing Element CEQA Streamlining Checklist (Form CP-4089). The City adopted a Mitigation and Monitoring Program (MMP) for the Program EIR, which describes the procedures and stipulations for implementing mitigation measures to be imposed as conditions of approval by the City on discretionary projects. Mitigation Measure (MM) 4.15-1(a) of the MMP address tribal cultural resources and defines procedures to identify resources and implement applicable impact reduction techniques to reduce substantial adverse effects.

SWCA Environmental Consultants (SWCA) is working as an agent on behalf of the Project Applicant and City. This letter is intended to notify you of the proposed Project pursuant to MM 4.15-1(a) and request any information concerning a tribal cultural resource or likelihood of a potential tribal cultural resource in the Development Area. This information request is not being conducted according to the requirements of Assembly Bill 52 (AB 52), but any information you may wish to provide will be subject to the confidentiality protections provided under Public Resources Code Section 21082.3(c), and as such, will not be included in any publicly circulated documents.

We request that you please respond within 14 calendar days of receipt of this letter to notify us if you have input or questions about the proposed Project. Please provide your contact information and send your request via U.S. mail and/or email to:

Re: Notification and Information Request for the ROW DTLA Residential Project, Housing Element CEQA Streamlining Checklist, City of Los Angeles, California

Project Address: 757–787 South Alameda Street, 1318–1396 East 7th Street, 736–796 South Central Avenue, 1301–1327 East 8th Street, 700–760 South Market Court, 720–746 South Terminal Street, and 760 South Warehouse Street

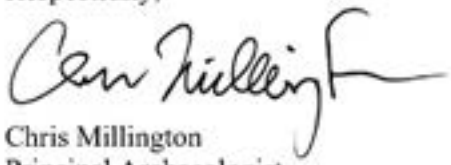
Dear Tribal Representative:

This letter is to inform you that the following proposed project is being reviewed by the Los Angeles Department of City Planning (City Planning) according to the Housing Element CEQA Streamlining Checklist (Form CP-4089):

> The ROW DTLA Residential Project (Project) involves the demolition of existing surface parking lots and the construction of two mixed-use buildings and one multi-family building in a 4.8-acre portion (the Development Area) of an approximately 30.65-acre Project Site. The Project Site is in an expansive industrialized area in the east of Downtown Los Angeles. The area surrounding the Project Site is primarily developed with warehouses, cold storage facilities, small-scale manufacturing operations, and other industrial uses, though in more recent years newer commercial office, commercial retail, and residential uses have been developed in the vicinity of the Project Site. The portion of the Project Site along Central Avenue is used as a wholesale produce market and an outdoor weekend market known as Smorgasburg. Except for 747 South Alameda Street, which is currently vacant, the middle portion of the Site between 7th and 8th Street supports retailers and restaurants and another office and hybrid office/light manufacturing tenants that span multiple industries including technology, apparel, construction, produce wholesale and consumer goods. This area also includes a ten-story concrete parking structure that was built in 2016 and is accessed via South Alameda Street. These existing uses will remain and are not being modified by the Project.
>
> The Project proposes to construct three eight-story new construction buildings, including residential units, parking, and retail and cafe space. The three new buildings—Buildings A, B, and C—would be located just north and south of Center Street, which runs east-west through the Project Site. Buildings A and B would be south of Center Street and Building C would be north of Center Street. Building A would include commercial space at the first floor, residential units at the first through eighth floors, and two levels of subterranean parking. Building B would include residential units at the first through eight floors and two levels of subterranean parking. Building C would consist of

commercial space at the first floor, residential units at the first through eighth floors, and two levels of subterranean parking. All three buildings would be surrounded by landscaping.

Ground disturbances required for the Project would occur during demolition of the existing surface parking lot and excavation for the subterranean parking and elevator pits with associated footings. These activities would be limited to a 4.8-acre area within the Project Site that is designated here as the Development Area and is located at 747–787 South Alameda Street, 1390–1396 East 7th Street, Los Angeles, California, 90021. The Development Area consists of two irregularly shaped areas and is currently developed with paved surface parking and limited ornamental vegetation. The average estimated depth of excavation to construct the two levels of subterranean parking beneath Buildings A-B and Building C is 20 feet below grade. The excavation to the respective depths would occur across the full extent of the Project Site in the two areas. Additional excavation to a depth of approximately 28 feet below-grade would be conducted under the elevator pit and associated footings.



The Los Angeles City Council certified the *Citywide Housing Element 2021-2029 and Safety Element Updates Final Environmental Impact Report* (Program EIR). The proposed Project is within the scope of the Housing Element Program analyzed in the Program EIR, and the environmental clearance for the Project is being analyzed using the Housing Element CEQA Streamlining Checklist (Form CP-4089). The City adopted a Mitigation and Monitoring Program (MMP) for the Program EIR, which describes the procedures and stipulations for implementing mitigation measures to be imposed as conditions of approval by the City on discretionary projects. Mitigation Measure (MM) 4.15-1(a) of the MMP address tribal cultural resources and defines procedures to identify resources and implement applicable impact reduction techniques to reduce substantial adverse effects.

SWCA Environmental Consultants (SWCA) is working as an agent on behalf of the Project Applicant and City. This letter is intended to notify you of the proposed Project pursuant to MM 4.15-1(a) and request any information concerning a tribal cultural resource or likelihood of a potential tribal cultural resource in the Development Area. This information request is not being conducted according to the requirements of Assembly Bill 52 (AB 52), but any information you may wish to provide will be subject to the confidentiality protections provided under Public Resources Code Section 21082.3(c), and as such, will not be included in any publicly circulated documents.

We request that you please respond within 14 calendar days of receipt of this letter to notify us if you have input or questions about the proposed Project. Please provide your contact information and send your request via U.S. mail and/or email to:

Subject: Notification Letter for the ROW DTLA Residential Project, Los Angeles
Date: Monday, August 4, 2025 9:47:00 AM
Attachments: ROW DTLA - Tribal Outreach Letter_Charles Alvarez.pdf
image001.png

Greetings Mr. Alvarez,

My name is Chris Millington, and I am an archaeologist with SWCA Environmental Consultants based out of Pasadena. You and I have not been introduced, nor have we had any meaningful correspondence, so please forgive the formal nature of this email as an introduction. We recently attempted to send you an outreach letter using the address we were given by the NAHC and City of Los Angeles. The letter was returned as undeliverable, so I am attaching an electronic version as a pdf.

The attached letter provides information on the ROW DTLA Residential Project being assessed through the City's Housing Element CEQA Streamlining process, which requires that notification letters be provided to local tribal representatives, including yourself. If you wish to respond, you are welcome reply to this email or call at either of the numbers listed below.

Thank you in advance for your consideration and I hope we can connect in some capacity in the future.

Best,
Chris

Subject: Undeliverable: Notification Letter for the ROW DTLA Residential Project, Los Angeles

Your message to roadkingcharles@aol.com couldn't be delivered.

When Office 365 tried to send your message, the receiving email server outside Office 365 reported an error.

cmillington	**Office 365**	**roadkingcharles**
Sender		**Action Required**
		Policy violation or system error

How to Fix It

Check the "Reported Error" from the "Error Details" section shown below for more information about the problem. The error might tell you what went wrong and how to fix it. For example, if the error states that the message was blocked due to a potential virus or because the message was too large, try sending the message again without attachments.

If you're not able to fix the problem, it's likely that only the recipient's email admin can fix it. Contact the recipient by some other means (by phone, for example) and ask them to tell their email admin about the problem. Give them the "Reported Error" from the "Error Details" section below.

Was this helpful? Send feedback to Microsoft

More Info for Email Admins

Status code: 550 5.0.350

The error reported by the receiving server wasn't specific enough to determine the exact

nature of the problem. These errors often indicate the message violates a security or policy setting configured on the recipient's email servers.

If the sender is unable to fix the problem by modifying their message, then it's likely a problem that only the recipient's email admin can fix. Try the following:

Check the error for information about the problem - The "Reported Error" returned by the external email server can be found in the "Error Details" section below. This error might tell you what went wrong and provide clues for how to fix it. For example, if the error states the message was rejected due a Sender Policy Framework (SPF) issue, then you'll have to work with your domain registrar to correctly configure your domain's SPF records.

Check the error for information about where the problem is happening - For example, look for a domain name like contoso.com. A domain name in the error might suggest who is responsible for the error. It could be the recipient's email server, or it could be a third-party service that your organization or the recipient's organization is using to process or filter email messages.

If you can't fix the problem, contact the responsible party's email admin - Give them the error code and error message from this non-delivery report (NDR) to help them troubleshoot the issue. For security or policy violation issues, it might be sufficient for them to just add your sending IP addresses or domain to their allowed senders list.

It's likely that only the recipient's email admin can fix the problem. Unfortunately, it's unlikely Office 365 Support will be able to help with these kinds of externally reported errors.

Tribal Correspondence (CONFIDENTIAL)

This appendix contains **confidential information** submitted by a California Native American tribe that is considered in the environmental review but is exempt from public disclosure consistent with Public Resources Code Section 21082.3(c). This appendix is omitted from publicly circulated drafts of this report.

From: Chris Millington
To: Gabrieleno Administration
Subject: RE: ROW DTLA Residential Project
Date: Monday, July 28, 2025 1:50:00 PM

Greetings,

I suppose who I refer you to depends on the nature of the request. The lead agency for the ROW DTLA Residential Project is the City of Los Angeles Planning Department, and the outreach letter we sent is part of the Housing Element CEQA streamlining process. That process allows the Project applicant (or their consultant) to send notification letters and request any information to be considered, rather than being government-to-government consultation as it is under AB 52 or SB 18, for example. There are other differences between this and the AB 52 process. SWCA was asked to submit the letters, gather responses, and provide information if it is requested where it concerns the ROW DTLA Residential Project.

If you would like to talk with the planner assigned to the ROW DTLA Residential Project, I can certainly forward the request. I will still be obligated to follow-up with you to confirm whether you have any other project related questions, if you would like additional information on anything, if there is information that you think we should be considering, or if you have any other comments or requests. And if you prefer to schedule a conference call to discuss, then I can arrange this as well. Some questions I may be able to answer, others I would defer to the appropriate project staff. Let me know if you have any comments or questions related to the ROW DTLA Residential Project.

Otherwise, if you have questions about the overall process, then that would be a different contact than the planner for this project.

Call if you need to and thanks for the message.

Best,
Chris

Subject: ROW DTLA Residential Project

Dear Chris Milington,

Can you please provide the lead agencies contact information.

Tribal MMs (Kizh Nation)

TCR-1: Retain a Native American Monitor Prior to Commencement of Ground-Disturbing Activities

The project applicant/lead agency shall retain a Native American Monitor from or approved by the Gabrieleño Band of Mission Indians – Kizh Nation. The monitor shall be retained prior to the commencement of any "ground-disturbing activity" for the subject project at all project locations (i.e., both on-site and any off-site locations that are included in the project description/definition and/or required in connection with the project, such as public improvement work). "Ground-disturbing activity" shall include, but is not limited to, demolition, pavement removal, potholing, auguring, grubbing, tree removal, boring, grading, excavation, drilling, and trenching.

A copy of the executed monitoring agreement shall be submitted to the lead agency prior to the earlier of the commencement of any ground-disturbing activity, or the issuance of any permit necessary to commence a ground-disturbing activity.

The monitor will complete daily monitoring logs that will provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of ground-disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor logs will identify and describe any discovered TCRs, including but not limited to, Native American cultural and historical artifacts, remains, places of significance, etc., (collectively, tribal cultural resources, or "TCR"), as well as any discovered Native American (ancestral) human remains and burial goods. Copies of monitor logs will be provided to the project applicant/lead agency upon written request to the Tribe.

On-site tribal monitoring shall conclude upon the latter of the following (1) written confirmation to the Kizh from a designated point of contact for the project applicant/lead agency that all ground-disturbing activities and phases that may involve ground-disturbing activities on the project site or in connection with the project are complete; or (2) a determination and written notification by the Kizh to the project applicant/lead agency that no future, planned construction activity and/or development/construction phase at the project site possesses the potential to impact Kizh TCRs.

TCR-2: Unanticipated Discovery of Tribal Cultural Resource Objects (Non-Funerary/Non-Ceremonial)

Upon discovery of any TCRs, all construction activities in the immediate vicinity of the discovery shall cease (i.e., not less than the surrounding 50 feet) and shall not resume until the discovered TCR has been fully assessed by the Kizh monitor and/or Kizh archaeologist. The Kizh will recover and retain all discovered TCRs in the form and/or

manner the Tribe deems appropriate, in the Tribe's sole discretion, and for any purpose the Tribe deems appropriate, including for educational, cultural and/or historic purposes.

TCR-3: Unanticipated Discovery of Human Remains and Associated Funerary or Ceremonial Objects

Native American human remains are defined in PRC 5097.98 (d)(1) as an inhumation or cremation, and in any state of decomposition or skeletal completeness. Funerary objects, called associated grave goods in Public Resources Code Section 5097.98, are also to be treated according to this statute.

If Native American human remains and/or grave goods are discovered or recognized on the project site, then Public Resource Code 5097.9 as well as Health and Safety Code Section 7050.5 shall be followed.

Human remains and grave/burial goods shall be treated alike per California Public Resources Code section 5097.98(d)(1) and (2).

Preservation in place (i.e., avoidance) is the preferred manner of treatment for discovered human remains and/or burial goods.

Any discovery of human remains/burial goods shall be kept confidential to prevent further disturbance.

SWCA Cultural Resources Report No. 23-74

November 4, 2025

Keywords: California Environmental Quality Act (CEQA); City and County of Los Angeles; archaeological and tribal cultural resources, literature search, archival research, geoarchaeological assessment; management/planning; 4.8 acres; Yaanga, Gabrielino; Zanja No. 2, Zanja No. 3; Feliz (Felix) Gallardo, Don Antonio Francisco Coronel; Township 1 South, Range 13 West, Section 22 and 27; U.S. Geological Survey (USGS) Los Angeles, California, 7.5-minute topographic quadrangle

EXECUTIVE SUMMARY

Purpose and Scope: SWCA Environmental Consultants (SWCA) prepared this cultural resources assessment for the proposed ROW DTLA Residential Project (the Project) in an industrialized area in the east of the Downtown Los Angeles, California. The Project proposes the demolition of existing surface parking lots and the construction of two mixed-use buildings, one multi-family building, and two subterranean parking structures. The proposed Project is within a portion of the existing ROW DTLA site (the "Project Site"), which comprises three parcels that measure approximately 30.65 acres. Ground disturbances for the Project would be limited to an approximately 4.8-acre portion of the Project Site referred to as the "Development Area." The Development Area consists of two areas, north and south of Center Street, on the west side of Alameda Street between 7th Street and Bay Street. Ground-disturbing activities for the Project include demolition of the existing surface parking lot and excavation to an average depth of 20 feet below grade for new subterranean parking structures within the northern and southern portions of the Development Area, as well as excavation to a depth of 28 feet below grade within discrete locations for elevator pits and associated footings. Because the potential for impacts to archaeological and tribal cultural resources is limited to those areas subject to ground-disturbing activities, this study primarily focuses on the Development Area.

The Project is subject to the California Environmental Quality Act (CEQA), and the City of Los Angeles (City) Department of City Planning (DCP) is the lead agency. The Los Angeles City Council certified the *Citywide Housing Element 2021-2029 and Safety Element Updates Final Environmental Impact Report* (Program EIR) (DCP 2021b). The proposed Project is within the scope of the Housing Element Program analyzed in the Program EIR, and the environmental clearance for the Project is being analyzed using the Housing Element CEQA Streamlining Checklist (Form CP-4089). The City adopted a Mitigation and Monitoring Program (MMP) for the Program EIR, which describes the procedures and stipulations for implementing mitigation measures to be imposed as conditions of approval by the City on discretionary projects. Mitigation Measures 4.4-2 and 4.15-1(a) of the MMP address archaeological resources and tribal cultural resources, respectively, and defines procedures to identify resources and implement applicable impact reduction techniques to reduce substantial adverse effects.

SWCA prepared this cultural resources assessment for the Project in compliance with Section A of Mitigation Measure 4.4-2 (Archaeological Resources) and Mitigation Measure 4.15-1(a) (Native American Consultation and Monitoring for Discretionary Projects) of the MMP. This report presents the results of a study conducted by a qualified archaeologist to determine if archaeological or tribal cultural resources are present within the Development Area, assess if resources are likely to be encountered within the Development Area, analyze the potential for the proposed Project to have significant impacts to archaeological and tribal cultural resources, and recommend mitigation measures to reduce impacts to less-than-significant levels to the extent feasible. The methods used in this study include a confidential records search of the California Historical Resources Information System (CHRIS), a Sacred Lands File (SLF) Search by the Native American Heritage Commission (NAHC), outreach to California Native American tribes, and research conducted by SWCA using archival and other materials. The information from these sources was used to assess if any new archaeological resources may be present within the Development Area. The impact analysis is based on the significance thresholds from the Environmental Checklist in Appendix G of CEQA Guidelines. The measures recommended herein are taken exclusively from the MMP for the Program EIR.

Dates of Investigation: The NAHC transmitted the results of their SLF search on January 19, 2024. The South Central Coastal Information Center (SCCIC) transmitted the results of their CHRIS search on February 8, 2024. Research and analysis for the Project was conducted by SWCA from January to December 2024. Notification letters were submitted to ten (10) California Native American tribes and delivered through the U.S. Postal Services via Certified Mail between July 21 and 25, 2025. Responses

were requested within two weeks of receipt. One response to the notification letters was received via email on July 28, 2025, and a reply sent on the same day, but no responses was received but the City was contacted by the Gabrieleño Band of Mission Indians-Kizh Nation. Between August and October 2025, the City correspondence with the Gabrieleño Band of Mission Indians-Kizh Nation via email and one conference call. As of November 4, 2025, no other responses to the notification letters have been received.

Summary of Findings: The SLF search was positive and in the response letter, the NAHC noted that the Gabrieleño Band of Mission Indians – Kizh Nation should be contacted for additional information regarding the results. The NAHC's response to SWCA's request included a list of 12 Native American contacts who may have knowledge of resources in or near the Development Area and recommended they be contacted. The Gabrieleño Band of Mission Indians – Kizh Nation received written notification of the Project on July 21, 2025. SWCA received a response to the letter via email on July 28, but no information pertaining specifically to the SLF results was provided. Through the email correspondence and conference call, the Gabrieleño Band of Mission Indians-Kizh Nation indicated they consider the Development Area to be sensitive and requested three measures. The measures include requirements for a Native American monitor during ground-disturbing activities (TCR-1), and protocols to follow in the event there is a discovery of a non-funerary/ceremonial tribal cultural resource (TCR-2) or human remains and funerary/ceremonial objects (TCR-3). No information was submitted by the Gabrieleño Band of Mission Indians-Kizh Nation that indicates there is a known tribal cultural resource in the Development Area, nor was any additional information submitted to support their sensitivity assessment.

The CHRIS records search was conducted for a 0.8-km (0.5-mile) radius surrounding the Development Area. There have been no archaeological resources or potential tribal cultural resources recorded within the Development Area. One historical archaeological site (CA-LAN-4660H) composed of mid- to late-nineteenth century components was identified 0.6 km (0.4 miles) to the northwest of the Development Area. SWCA noted five Native American archaeological sites (not previously assessed as tribal cultural resources) that have been recorded in the downtown Los Angeles area that were outside the CHRIS records boundary. SWCA also noted the presence of an industrial complex historically called the Los Angeles Union Wholesale Terminal, previously owned by the Southern Pacific Railroad (SPRR), which currently encompasses a total of eight buildings, including seven large industrial buildings that were constructed between 1917 and 1923 (collectively the "District"). The District is in the Project Site but the two paved surface parking lots within the Development Area were constructed in the 1980s and do not contribute to the District. The District was formally determined eligible for the National Register of Historic Places, making it automatically listed in the California Register of Historical Resources. The District is assessed for the current Project in a separate technical report prepared by Architectural Resources Group. There are no archaeological resources associated with the District and SWCA's CHRIS records search omitted non-archaeological resources.

Ethnographic sources described above have identified the Gabrielino village site of Yaanga as having been 2.25 km (1.4 miles) north of the Development Area. A second Gabrielino settlement known as Geveronga is described in ethnographic accounts as having been somewhere west of the Pueblo of Los Angeles. No physical traces of the Geveronga have ever been identified and the best approximation for its location is an area 44.46 km (2.8 miles) northwest of the Development Area. The location of the Development Area on the edge of the floodplain of the Los Angeles River and in reasonable proximity to a known Gabrielino settlement indicates that this area was more intensively used by Native Americans in the past compared to less intensively used areas within the traditional territory. More intensively used areas are more likely to produce physical evidence of those activities that can be preserved as archaeological deposits. The historical alterations documented within the Development Area have clearly reduced the likelihood that a Native American archaeological site may have once been present, but the potential for a buried site cannot be ruled out. Accordingly, SWCA finds the Development Area has

moderate sensitivity for Native American archaeological resources. This sensitivity is contained within alluvial sediments that are younger than 12,500 years in age. Sediments older than this are too old to contain Native American archaeological resources. The sensitivity for Native American archaeological resources is diminished within the fill sediments because of the historical land uses, but the sensitivity cannot be fully ruled out.

Historical land uses within the Development Area were assessed through archival research. During the nineteenth century, the Development Area was primarily used for agriculture. Two historical irrigation channels known as Zanja No. 2 and Zanja No. 3 are mapped near the Development Area, but archival sources indicate that neither of the zanjas passed directly through the Development Area. No buildings or structures were previously constructed within the Development Area during the nineteenth century. The agricultural activities are noteworthy in terms of the diminished potential for Native American archaeological sites, but the likelihood of substantial historical archaeological resources in the Development Area from before the 1900s is low. In the first decade of the twentieth century the Development Area was used for industrial purposes related to the Electric Railway Company and multiple buildings existed within the Development Area. However, by the 1920s, all these structures had been demolished and replaced with rail lines and a warehouse structure within the Development Area. The railroad tracks present within the Development Area were removed in the late 1970s and the industrial building present within the Development Area was demolished by the end of the 1980s. After these demolition events the Development Area was when the entire Development Area was converted into an at-grade parking lot.

The use of the Development Area as a rail yard for over 50 years suggests that if any physical materials are present within the Development Area, then they are likely associated with this land-use history. The paving of the Development Area may have preserved underlying deposits related to these activities, such as abandoned railroad ties, nails, and tracks, which are commonly found below ground in former industrial areas. Buildings materials, miscellaneous pieces of refuse including glass and metal food and beverage containers, and former building foundations are also common and could be present within the Development Area. Based on these findings, SWCA finds the Development Area has high sensitivity for containing historical archaeological resources. This sensitivity is contained within sediments designated as fill, which are estimated to extend from beneath the current pavement to as much as 5 feet below grade.

Impact Analysis: The Project requires the excavation and removal of fill and underlying alluvial sediments below the current grade. At a minimum, any sediments designated as fill within the Development Area have high sensitivity for archaeological resources. Specifically, there is a potential to encounter objects associated with industrial land uses beginning around 1900 throughout the Development Area. The potential for Native American archaeological resources is characterized as being moderate within alluvial sediments that are Holocene in age (deposited less than 12,500 years ago). If present, archaeological and tribal cultural resources in the Development Area could yield information important in prehistory or history and thereby satisfy Criterion 4 of the California Register of Historical Resources. Therefore, ground disturbances from the Project could cause a substantial adverse change in the significance of an archaeological resource and tribal cultural resource pursuant to California Code of Regulations Section 15064.5. Accordingly, SWCA finds that the Project could result in potentially significant impacts to archaeological and tribal cultural resources prior to mitigation.

Recommendations: Given the moderate to high sensitivity for archaeological and tribal cultural resources within the Development Area, SWCA recommends implementing a substitute measure for Section I of Mitigation Measure 4.4-2, Section J of Mitigation Measure 4.4-2, and a substitute measure for Mitigation Measure 4.15-1 to reduce impacts of the Project to a less than significant levels.

As written, Section I of Mitigation Measure 4.4-2 requires an archaeological monitor to be present during excavations and provide archaeological sensitivity training to construction personnel prior to initiating

construction. This will ensure any archaeological resources that may be present are identified by qualified monitors. The substitute measure for archaeological resources maintains the same requirements in Section I of Mitigation Measure 4.4-2 but adds a provision that requires the qualified archaeologist to prepare a Monitoring Plan, the scope of which is extended to address both archaeological and tribal cultural resources because the mitigation measures for each type of resource require equivalent actions to be taken and a Monitoring Plan that addresses both types of resources together will help to ensure consistency during implementation of the mitigation measures. The potential for impacts to an archaeological or tribal cultural resource is the same if the mitigation measures are implemented according to the Monitoring Plan. Thus, substituting Section I of Mitigation Measure 4.4-2 is more effective and will not cause a new significant impact.

Section J describes a procedure to follow if an archaeological resource is identified during construction. No other portions of Mitigation Measure 4.4-2 are recommended to reduce potentially significant impacts.

Mitigation Measure 4.15-1(b) outlines a process to be followed in the event a potential tribal cultural resource is discovered and includes the following requirements: temporarily halt work within a radius of 50 feet until the discovery can be assessed by a Qualified Archaeologist and affiliated tribes; retain a tribal monitor if a tribal cultural resource is identified; identify appropriate treatment consistent with existing regulations and in consultation with affiliated tribes; observe confidentiality requirements concerning the discovered resource, and; allow for adequate documentation of scientific information when applicable. The substitute measure for tribal cultural resources (TRC-MM-1) includes provisions that satisfy the same minimum requirements in Mitigation Measure 4.15-1(b) but adds requirements for worker training and tribal monitoring in areas with sensitivity for tribal cultural resources. The substitute measure includes elements of the three measures requested by the Gabrieleño Band of Mission Indians—Kizh Nation, specifically the elements stipulating the requirements for and methods used by a tribal monitor during ground-disturbing activities. The other elements of the measures requested by the Gabrieleño Band of Mission Indians—Kizh Nation are addressed in the other provisions of the substitute measure based on the minimum requirements incorporated from Mitigation Measure 4.15-1(b), such as requirements for tribal consultation while assessing potential tribal cultural resources and identifying appropriate forms of treatment for confirmed resources. The substitute measure also incorporates additional details to clarify the performance standards and ensure compliance with existing regulations, conformance with industry standards and best practices, and compatibility with other mitigation measures for the Project, specifically those for archaeological resources. By maintaining the same minimum requirements in Mitigation Measure 4.15-1(b) and adding requirement to conduct tribal monitoring, consistent with the sensitivity assessment and measures requested by the Gabrieleño Band of Mission Indians—Kizh Nation, the substitute mitigation measure TCR-MM-1 is more effective and will not cause a new significant impact to tribal cultural resources.

Implementation of these measures would reduce potentially significant impacts to archaeological and tribal cultural resources to less-than-significant levels.

Disposition of Data: This report will be submitted to the Project Applicant and DCP, and then filed with the SCCIC at California State University, Fullerton to be included in the CHRIS. All research materials and copies of the report will be retained on file at SWCA's office in Pasadena, California.

INTRODUCTION

SWCA Environmental Consultants (SWCA) prepared this cultural resources assessment for the proposed ROW DTLA Residential Project (the Project) in an industrial area east of the downtown area of Los Angeles, California. The Project proposes the demolition of existing surface parking lots and the construction of two mixed-use buildings, one multi-family building, and two subterranean parking structures. The proposed Project is within a portion of the existing ROW DTLA site (the "Project Site"), which comprises three parcels that measure approximately 30.65 acres. Ground disturbances for the Project would be limited to an approximately 4.8-acre portion of the Project Site referred to as the "Development Area." The Development Area consists of two areas, north and south of Center Street, on the west side of Alameda Street between 7th Street and Bay Street. Ground-disturbing activities for the Project include demolition of the existing surface parking lot and excavation for new subterranean parking structures and elevator pits within the northern and southern portions of the Development Area. Because the potential for impacts to archaeological resources is limited to those areas subject to ground-disturbing activities, this study primarily focuses on the Development Area. The analysis of historical resources was conducted by Architectural Resources Group (ARG) and presented in a separate technical report (ARG 2024).

The Project is subject to the California Environmental Quality Act (CEQA), and the City of Los Angeles (City) Department of City Planning (DCP) is the lead agency. The Los Angeles City Council certified the *Citywide Housing Element 2021-2029 and Safety Element Updates Final Environmental Impact Report* (Program EIR) (DCP 2021b). The proposed Project is within the scope of the Housing Element Program analyzed in the Program EIR, and the environmental clearance for the Project is being analyzed using the Housing Element CEQA Streamlining Checklist (Form CP-4089). The City adopted a Mitigation and Monitoring Program (MMP) for the Program EIR, which describes the procedures and stipulations for implementing mitigation measures to be imposed as conditions of approval by the City on discretionary projects. Mitigation Measure 4.4-2 of the MMP and 4.15-1(a) of the MMP address archaeological resources and tribal cultural resources, respectively, and defines procedures to identify resources and implement applicable impact reduction techniques to reduce substantial adverse effects.

SWCA prepared this cultural resources assessment for the Project in compliance with Section A of Mitigation Measure 4.4-2 (Archaeological Resources) and Measure 4.15-1(a) (Native American Consultation and Monitoring for Discretionary Projects) of the MMP.[1] This report presents the results of a study conducted by a qualified archaeologist to determine if archaeological and tribal cultural resources are present within the Development Area, assess if resources are likely to be encountered within the Development Area, analyze the potential for the proposed Project to have significant impacts, and recommend mitigation measures to reduce impacts to less-than-significant levels to the extent feasible. The methods used in this study include a confidential records search of the California Historical Resources Information System (CHRIS), a Sacred Lands File (SLF) Search by the Native American Heritage Commission (NAHC), outreach to California Native American tribes, and research conducted by SWCA using archival and other materials. The information from these sources was used to assess if any new archaeological and tribal cultural resources may be present within the Development Area. The impact analysis is based on the significance thresholds from the Environmental Checklist in Appendix G of CEQA Guidelines. The measures recommended herein are taken exclusively from the MMP for the Program EIR.

[1] Sections A and I of Mitigation Measure 4.4-2 and Mitigation Measure 4.15-1 refer to a *cultural* resources assessment as the type of technical study prepared to analyze archaeological and tribal cultural resources. Under the Environmental Checklist in Appendix G of CEQA Guidelines, impacts to cultural resources are analyzed under three separate categories—historical resources, archaeological resources, and human remains. This scope of this study is limited to analysis of archaeological and tribal cultural resources and excludes analysis of historical resources or human remains. The naming convention of "cultural resources assessment" is retained here for consistency with the terminology used in the Program EIR MMP.

This report was prepared by SWCA Senior Archaeologist Chris Millington, M.A., Registered Professional Archaeologist, and Archaeologist Erica Nicolay, M.A. Chris Millington acted as the Principal Investigator, and he meets the Secretary of the Interior's Professional Qualification Standard (PQS) in archeology. A final draft of this report will be submitted to the South Central Coastal Information Center (SCCIC), located at California State University, Fullerton, to be included in the CHRIS. Research materials and copies of the report will be retained on file with SWCA's office in Pasadena, California.

PROJECT LOCATION AND DESCRIPTION

The Project involves the demolition of existing surface parking lots and the construction of two mixed-use buildings and one multi-family building in a 4.8-acre portion (the Development Area) of an approximately 30.65-acre Project Site known as ROW DTLA. The Project Site is in an expansive industrialized area in the east of Downtown Los Angeles (Figure 1). The Project Site and Development Area are in Sections 33 and 34 of Township 1 South, Range 13 West, and Sections 3 and 4 of Township 2 South, Range 13 West, which is plotted on the U.S. Geological Survey (USGS) Los Angeles, California, quadrangle (Figure 2). The Project Site occupies an area that is bound by East 7th Street to the north, South Central Avenue to the west, South Alameda Street to the east, and East Olympic Boulevard to the south (Figure 3). The Project Site comprises three irregularly shaped parcels that are associated with the following addresses: 757–787 South Alameda Street, 1318–1396 East 7th Street, 736–796 South Central Avenue, 1301–1327 East 8th Street, 700–760 South Market Court, 720–746 South Terminal Street, and 760 South Warehouse Street.

The area surrounding the Project Site is primarily developed with warehouses, cold storage facilities, small-scale manufacturing operations, and other industrial uses, though in more recent years newer commercial office, commercial retail, and residential uses have been developed in the vicinity of the Project Site. The portion of the Project Site along Central Avenue is used as a wholesale produce market and an outdoor weekend market known as Smorgasburg. Except for 747 South Alameda Street, which is currently vacant, the middle portion of the Site between 7th and 8th Street supports retailers and restaurants and another office and hybrid office/light manufacturing tenants that span multiple industries including technology, apparel, construction, produce wholesale and consumer goods. This area also includes a ten-story concrete parking structure that was built in 2016 and is accessed via South Alameda Street. These existing uses will remain and are not being modified by the Project.

The Project proposes to construct three eight-story new construction buildings, including residential units, parking, and retail and cafe space. The three new buildings—Buildings A, B, and C—would be located just north and south of Center Street, which runs east-west through the Project Site (Figure 4). Buildings A and B would be south of Center Street and Building C would be north of Center Street. Building A would include commercial space at the first floor, residential units at the first through eighth floors, and two levels of subterranean parking. Building B would include residential units at the first through eight floors and two levels of subterranean parking. Building C would consist of commercial space at the first floor, residential units at the first through eighth floors, and two levels of subterranean parking. All three buildings would be surrounded by landscaping.

Figure 1. Project vicinity map.

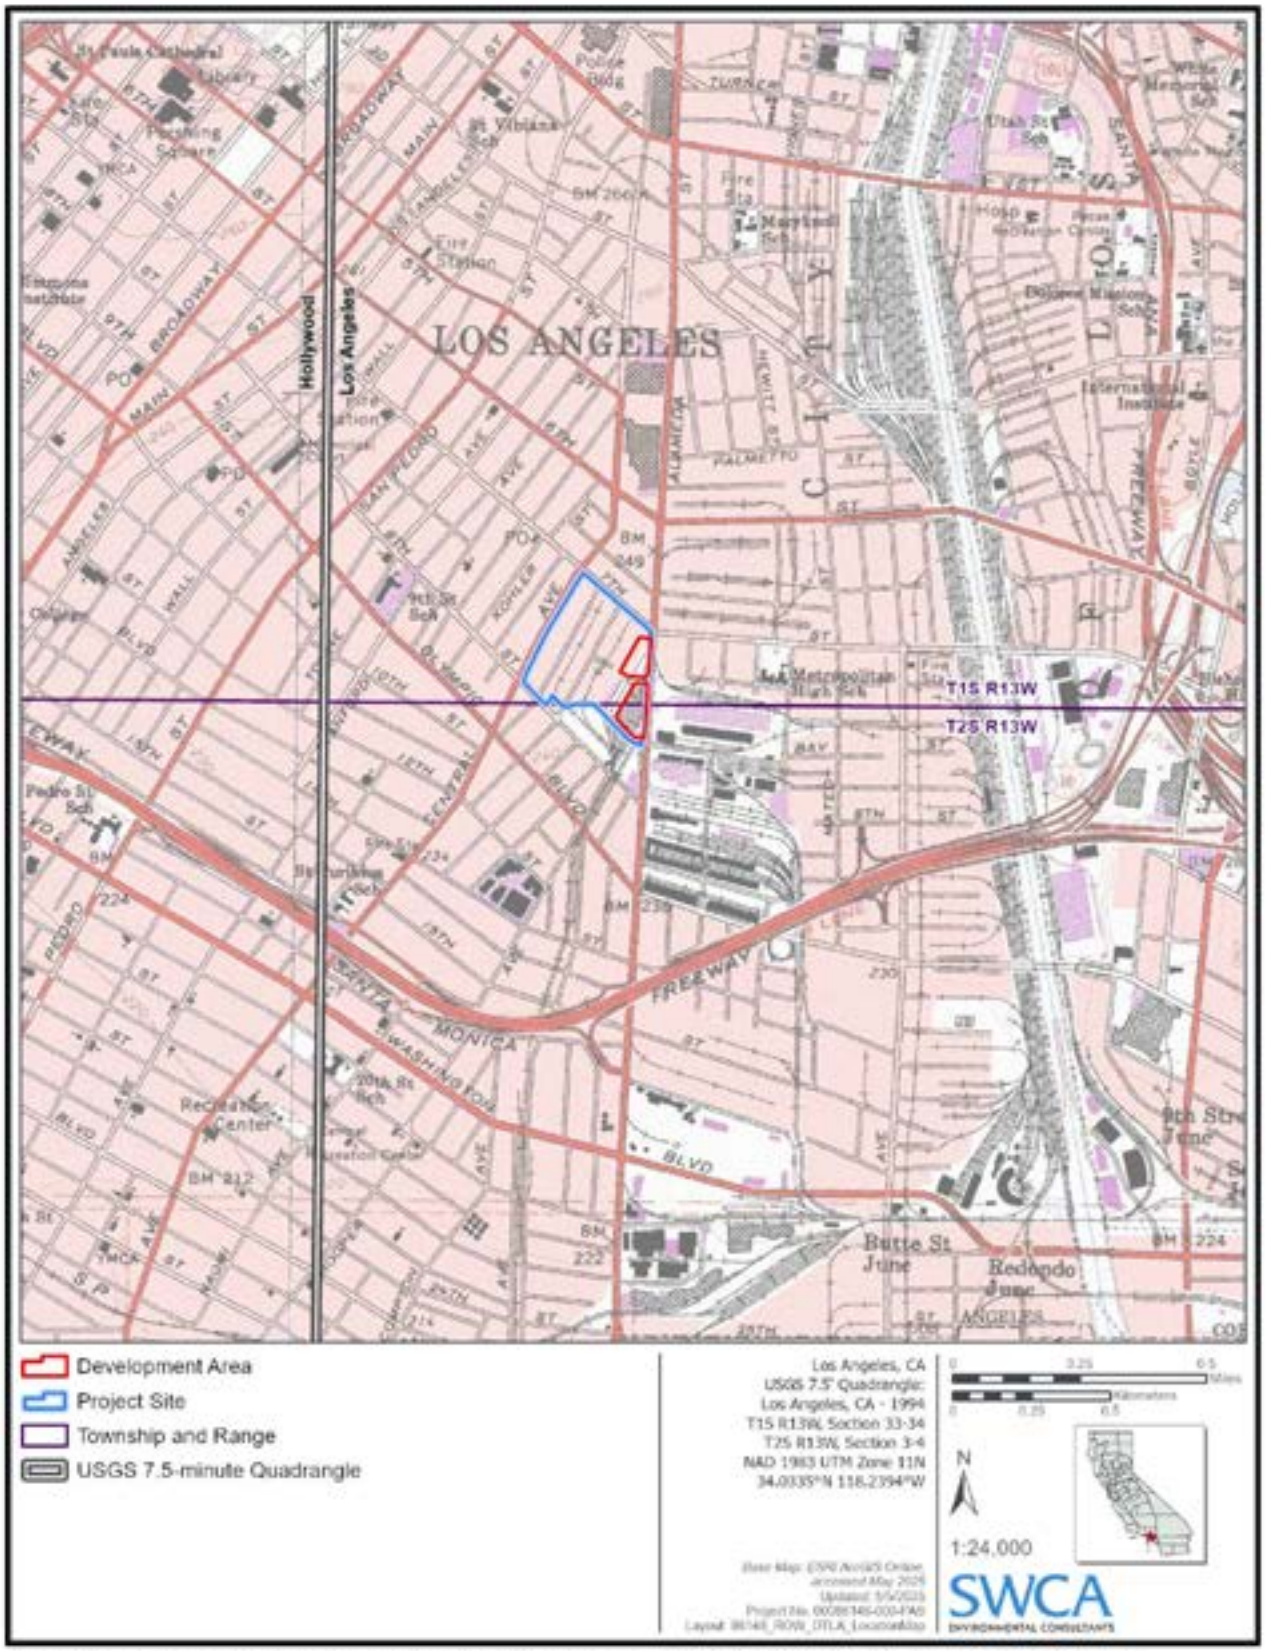

Figure 2. Project location plotted on USGS 7.5-minute quadrangle, Los Angeles, California.

Figure 3. Development Area (red outline) within the larger Project Site (blue outline) plotted on a 2023 aerial photograph.

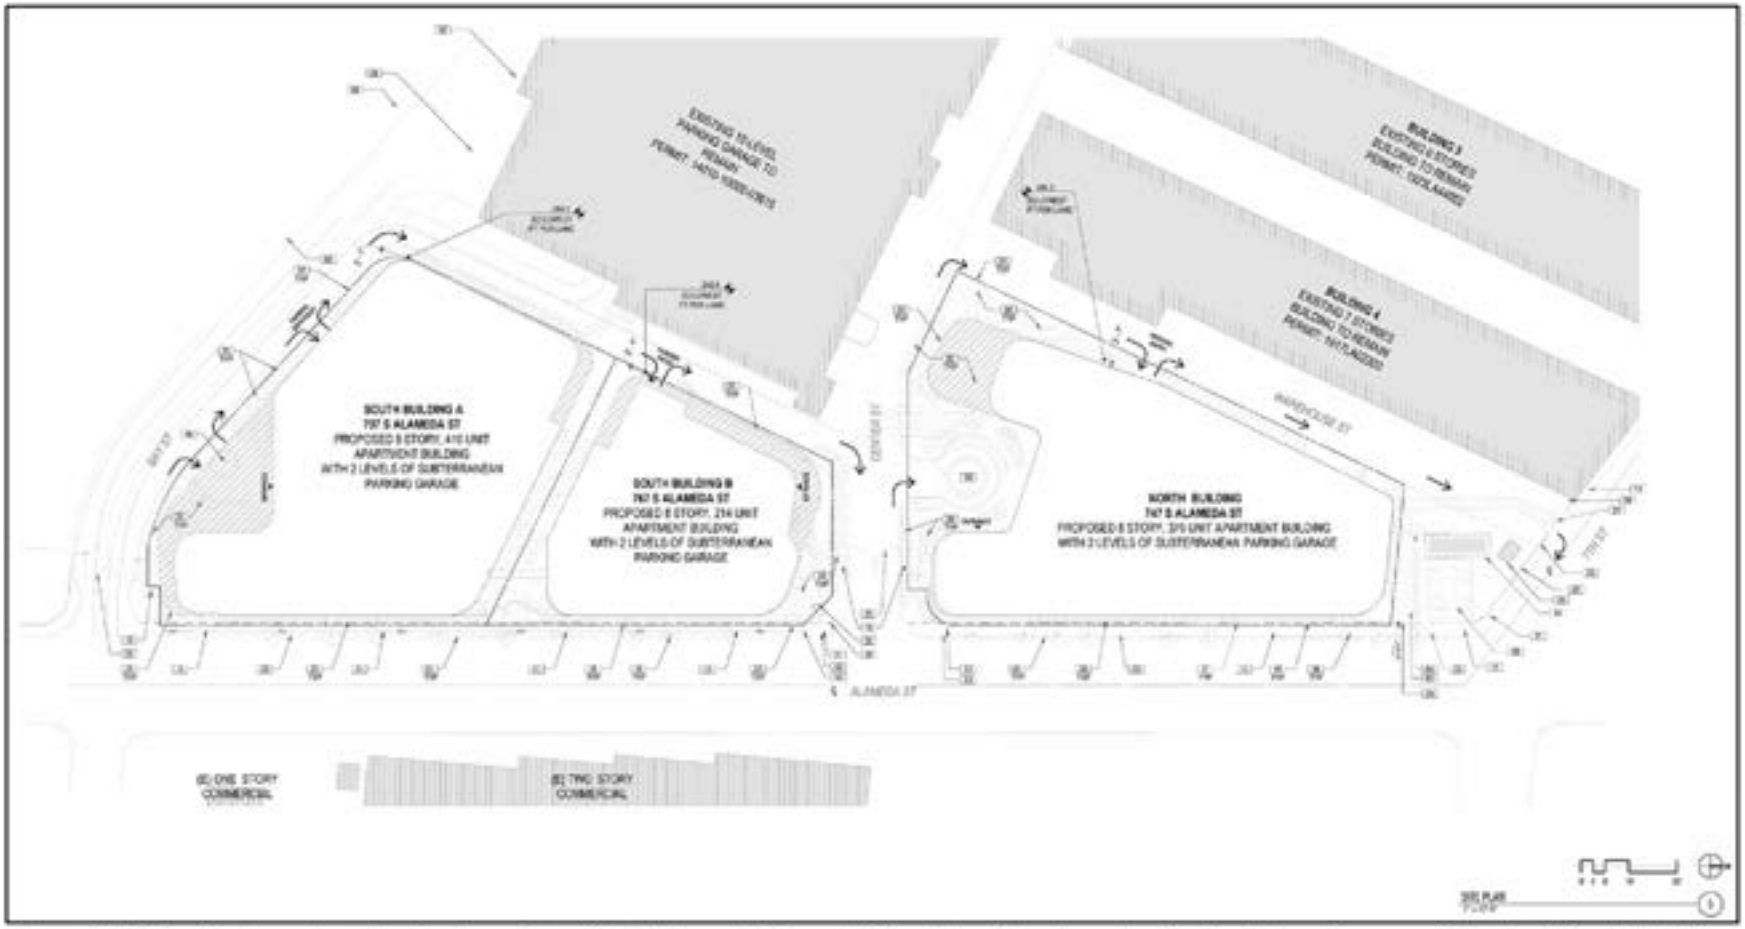

Figure 4. Project plans showing the location of Buildings A, B, and C (bold outlines) and extant buildings to remain in the Site (shaded). Note that the right side faces north and Alameda Street runs along the bottom of the frame and Bay Street on the left.

Ground disturbances required for the Project would occur during demolition of the existing surface parking lot and excavation for the subterranean parking and elevator pits with associated footings. These activities would be limited to a 4.8-acre area within the Project Site that is designated here as the Development Area (see Figure 3 and Figure 4) and is located at 747–787 South Alameda Street, 1390–1396 East 7th Street, Los Angeles, California, 90021. The Development Area consists of two irregularly shaped areas and is currently developed with paved surface parking and limited ornamental vegetation. The average estimated depth of excavation to construct the two levels of subterranean parking beneath Buildings A-B and Building C is 20 feet below grade. The excavation to the respective depths would occur across the full extent of the Project Site in the two areas. Additional excavation to a depth of approximately 28 feet below-grade would be conducted under the elevator pit and associated footings.

REGULATORY SETTING

State Regulations

The California Office of Historic Preservation (OHP), a division of the California Department of Parks and Recreation, performs certain duties described in the California Public resources Code (PRC) and maintains the California Historic Resources Inventory and California Register of Historical Resources (CRHR). The state-level regulatory framework also includes CEQA, which requires the identification and, if necessary, mitigation of substantial adverse impacts that may affect the significance of historical resources and archaeological resources. Under CEQA Guidelines (Title 14, Division 6, Chapter 3 of California Code of Regulations [CCR]), archaeological resources are analyzed as a type of cultural resource, and a significant archaeological resource is a historical resource.

California Environmental Quality Act

Under CEQA, a "project that may cause a substantial adverse change in the significance of a historical resource is a project that may have a significant effect on the environment" (PRC Section 21084.1). Analyzing the potential for impacts to a historical resource requires first determining if the proposed project involves a historical resource. If cultural resources are present, then the proposed project must be analyzed for a potential "substantial adverse change in the significance" of the resource.

HISTORICAL RESOURCES

According to CEQA Guidelines Section (CCR Section 15064.5), for the purposes of CEQA, historical resources are:

- A resource listed in, or formally determined to be eligible by the State Historical Resources Commission, for listing in the CRHR (PRC 5024.1, 14 CCR 4850 et seq.).
- A resource included in a local register of historical resources, as defined in PRC Section 5020.1(k), or identified as significant in a historic resources survey by meeting the requirements of PRC Section 5024.1(g).
- Any object, building, structure, site, area, place, record, or manuscript that the lead agency determines to be eligible for national, state, or local landmark listing; generally, a resource shall be considered by the lead agency to be historically significant (and therefore a historic resource under CEQA) if the resource meets the criteria for listing on the CRHR (as defined in PRC Section 5024.1, 14 CCR 4852).

Resources nominated to the CRHR must retain enough of their historic character or appearance to convey the reasons for their significance. Resources whose historic integrity (as defined above) does not meet National Register of Historic Places (NRHP) criteria may still be eligible for the CRHR.

According to CEQA, the fact that a resource is not listed in or determined eligible for the CRHR or is not included in a local register or survey, shall not preclude the lead agency from determining that the resource may be a historical resource (PRC Section 5024.1). Pursuant to CEQA, a project with an effect that may cause a substantial adverse change in the significance of a historical resource may have a significant effect on the environment (CEQA Guidelines, Section 15064.5[b]).

Substantial Adverse Change and Indirect Impacts to Historical Resources

CEQA Guidelines specify that a "substantial adverse change in the significance of an historical resource means physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired" (CEQA Guidelines, Section 15064.5). Material impairment occurs when a project alters in an adverse manner or demolishes "those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion" or eligibility for the NRHP, CRHR, or local register. In addition, pursuant to CEQA Guidelines Section 15126.2, the "direct and indirect significant effects of the project on the environment shall be clearly identified and described, giving due consideration to both the short-term and long-term effects."

UNIQUE ARCHAEOLOGICAL RESOURCES

In terms of archaeological resources, PRC Section 21083.2(g) defines a unique archaeological resource as an archaeological artifact, object, or site about which it can be clearly demonstrated that without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

1. Contains information needed to answer important scientific research questions, and that there is a demonstrable public interest in that information.
2. Has a special and particular quality, such as being the oldest of its type or the best available example of its type.
3. Is directly associated with a scientifically recognized important prehistoric or historic event or person.

TRIBAL CULTURAL RESOURCES

Assembly Bill 52

Assembly Bill (AB) 52 went into effect on January 1, 2015. The bill amended PRC 5097.94 and added PRC 21073, 21074, 21080.3.1, 21080.3.2, 21082.3, 21083.09, 21084.2, and 21084.3. PRC 21074(a) provides an initial set of criteria that define a tribal cultural resource as including but not limited to any of the following:

1. Sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are either of the following:
   Included or determined to be eligible for inclusion in the California Register of Historical Resources (CRHR).
   Included in a local register of historical resources as defined in subdivision (k) of PRC 5020.1.

2. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of PRC 5024.1. In applying the criteria set forth in subdivision (c) of PRC 5024.1 for the purposes of this paragraph, the lead agency shall consider the significance of the resource to a California Native American tribe.

Subdivision (b) of PRC 21074 adds that a tribal cultural resource may also be a cultural landscape provided it meets the criteria of subdivision (a), so long as the landscape is geographically defined in size and scope. Subdivision (c) of PRC 21074 clarifies that so long as the criteria in subdivision (a) are satisfied, the status as a unique or non-unique archaeological resource is not factored into the determination of whether a resource is a tribal cultural resource.

Section 1(a)(9) of AB 52 establishes that "a substantial adverse change to a tribal cultural resource has a significant effect on the environment," such that effects on tribal cultural resources need to be considered under CEQA. Section 6 of AB 52 adds PRC 21080.3.2, which states that parties may propose mitigation measures "capable of avoiding or substantially lessening potential significant impacts to a tribal cultural resource or alternatives that would avoid significant impacts to a tribal cultural resource."

CALIFORNIA REGISTER OF HISTORICAL RESOURCES

Created in 1992 and implemented in 1998, the CRHR is "an authoritative guide in California to be used by state and local agencies, private groups, and citizens to identify the state's historical resources and to indicate what properties are to be protected, to the extent prudent and feasible, from substantial adverse change" (PRC Sections 21083.2 and 21084.1). Certain properties, including those listed in or formally determined eligible for listing in the NRHP and California Historical Landmarks numbered 770 and higher, are automatically included in the CRHR. Other properties recognized under the California Points of Historical Interest program, identified as significant in historical resources surveys, or designated by local landmarks programs, may be nominated for inclusion in the CRHR. According to PRC Section 5024.1(c), a resource, either an individual property or a contributor to a historic district, may be listed in the CRHR if the State Historical Resources Commission determines that it meets one or more of the following criteria, which are modeled on NRHP criteria:

- **Criterion 1:** It is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
- **Criterion 2:** It is associated with the lives of persons important in our past.
- **Criterion 3:** It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
- **Criterion 4:** It has yielded, or may be likely to yield, information important in history or prehistory.

Resources nominated to the CRHR must retain enough of their historic character or appearance to convey the reasons for their significance. Resources whose historic integrity does not meet NRHP criteria may still be eligible for listing in the CRHR. Although all sites are evaluated according to all four of the CRHR criteria, the eligibility for archaeological resources is typically considered under Criterion 4. Most prehistoric archaeological sites lack identifiable or important association with specific persons or events of regional or national history (Criteria 1 and 2), and/or lack the formal and structural attributes necessary to qualify as eligible under Criterion 3.

An archaeological site may be considered significant if it displays one or more of the following attributes: chronologically diagnostic, functionally diagnostic, or exotic artifacts; datable materials; definable

activity areas; multiple components; faunal or floral remains; archaeological or architectural features; notable complexity, size, integrity, time span, or depth; or stratified deposits. Determining the period(s) of occupation at a site provides a context for the types of activities undertaken and may well supply a link with other sites and cultural processes in the region. Further, well-defined temporal parameters can help illuminate processes of culture change and continuity in relation to natural environmental factors and interactions with other cultural groups. Finally, precise dating for an archaeological site can provide a link to regionally important research questions and a finding of eligibility under Criterion 4 (information potential). A site that cannot be dated is unlikely to possess the quality of significance required for CRHR eligibility or be considered a unique archaeological resource. The content of an archaeological site provides information regarding its cultural affiliations, temporal periods of use, functionality, and other aspects of its occupation history. The range and variability of artifacts present in the site can allow for reconstruction of changes in ethnic affiliation, diet, social structure, economics, technology, industrial change, and other aspects of culture.

Local Regulations

Los Angeles Historic-Cultural Monuments

Local landmarks in the City are known as Historic-Cultural Monuments (HCMs) and are under the aegis of DCP's Office of Historic Resources (OHR). Originally adopted in 1962, and most recently amended in 2018, the City's Cultural Heritage Ordinance establishes the criteria and process for designating HCMs as follows:

> [A] Historic-Cultural Monument (Monument) is any site (including significant trees or other plant life located on the site), building or structure of particular historic or cultural significance to the City of Los Angeles, including historic structures or sites in which the broad cultural, economic or social history of the nation, State or community is reflected or exemplified; or which is identified with historic personages or with important events in the main currents of national, State or local history; or which embodies the distinguishing characteristics of an architectural type specimen, inherently valuable for a study of a period, style or method of construction; or a notable work of a master builder, designer, or architect whose individual genius influenced his or her age. (City of Los Angeles Municipal Code Section 22.171.7)

The list of HCMs consists primarily of non-archaeological resources, but the criteria do not explicitly prohibit archaeological sites from being designated. There are currently two sites associated with Gabrielino settlements designated as HCMs (Nos. 112 and 490) that were originally identified from archaeological discoveries.

City of Los Angeles General Plan

CONSERVATION ELEMENT

Chapter II, Section 3 of the *Conservation Element of the City of Los Angeles General Plan* (Conservation Element) (DCP 2001), defers to the CEQA Guidelines in regard to the identification, evaluation, and mitigation of impacts to archaeological resources. The Conservation Element recognizes that the City has the primary responsibility to protect significant archaeological resources and states the following:

> If it is determined that a development project may disrupt or damage such a site, the project is required to provide mitigation measures to protect the site or enable study and

> documentation of the site, including funding of the study by the applicant. The city's environmental guidelines require the applicant to secure services of a bona fide archaeologist to monitor excavations or other subsurface activities associated with a development project in which all or a portion is deemed to be of archaeological significance. Discovery of archaeological materials may temporarily halt the project until the site has been assessed, potential impacts evaluated and, if deemed appropriate, the resources protected, documented and/or removed. (DCP 2001:II-4)

The Conservation Element gives the following objective and policy for archaeological and paleontological resources:

Objective: protect the city's archaeological and paleontological resources for historical, cultural, research and/or educational purposes.

Policy: continue to identify and protect significant archaeological and paleontological sites and/or resources known to exist or that are identified during land development, demolition or property modification activities.

CITYWIDE HOUSING ELEMENT 2021–2029

The Housing Element of the City's General Plan identifies Los Angeles's housing needs and opportunities and establishes clear goals and objectives to inform future housing decisions. The Housing Element Update was adopted by the City Council on November 24, 2021 (DCP 2021c). An environmental review for the Housing Element Update was completed pursuant to CEQA in conjunction with the Safety Element Update and targeted updates Health Element. A Draft Environmental Impact Report (EIR) was prepared and after incorporating input received during public scoping meetings and circulation, a revised draft was released in October 2021 and approved by the City Planning Commission (CPC) (DCP 2021a).

The *Citywide Housing Element 2021–2029 and Safety Element Updates Final Environmental Impact Report* (Program EIR) (DCP 2021b) was adopted and certified on October 29, 2021. The Program EIR included an MMP, which describes the procedures for implementing the mitigation measures put forward in the Draft EIR. The mitigation measures are included as conditions of approval on future discretionary projects, subject to the City's authority.

Using CEQA Guidelines Section 15168, subsequent projects may use the Program EIR as their environmental clearance if the project can be shown to be within the scope of the program addressed in the Program EIR, and its environmental effects are within the scope of environmental impacts analyzed in the Program EIR. Most projects involving new housing within the City are within the scope of the Housing Element Program and can use the Housing Element CEQA Streamlining Checklist for environmental clearance. For those housing projects found not to be within the scope of the impacts analyzed in the Program EIR, the Program EIR can be used to clear those impacts that were analyzed in the EIR and a tiered clearance, such as a mitigated negative declaration or focused EIR, can be used to clear those impacts that are not within the scope of the Program EIR.

The mitigation measures in the MMP for the Housing Element Update include the following provisions that apply to archaeological and tribal cultural resources (DCP 2021b:5-26–5-30, 5-51–5-53).

Archaeological Resources

4.4-2 Archaeological Resources

Discretionary projects that involve ground disturbance in native soils or soils of unknown origin, shall implement the following procedures to identify archaeological resources located in a development site and implement applicable impact reduction techniques to reduce substantial adverse effects associated with the inadvertent discovery of archaeological resources.

A. The project applicant shall retain a qualified archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards (PQS) in archaeology to complete a cultural resources assessment of the development site. A cultural resources assessment may include an archaeological pedestrian survey of the development site, if possible, and sufficient background archival research and field sampling to determine whether subsurface prehistoric or historic remains may be present. Archival research should include a records search conducted at the South Central Coastal Information Center (SCCIC) and a Sacred Lands File (SLF) search conducted with the Native American Heritage Commission (NAHC).

B. If prehistoric or historic archaeological remains are identified as a result of the SCCIC or SLF searches, the remains shall be avoided and preserved in place where feasible.

C. Where preservation is not feasible, each resource shall be evaluated for significance and eligibility to the California Register. Phase 2 evaluation shall include any necessary archival research to identify significant historical associations as well as mapping of surface artifacts, collection of functionally or temporally diagnostic tools and debris, and excavation of a sample of the cultural deposit to characterize the nature of the sites, define the artifact and feature contents, determine horizontal boundaries and depth below surface, and retrieve representative samples of artifacts and other remains.

D. Excavation at Native American sites shall be monitored by a geographically affiliated tribal representative, as agreed upon in any formal consultation proceedings with the geographically affiliated tribe or as indicated by the NAHC. If no tribal monitor is available, the monitoring shall be done by a qualified archaeologist.

E. Cultural materials collected from the sites shall be processed and analyzed in the laboratory according to standard archaeological procedures. The age of the remains shall be determined using radiocarbon dating and other appropriate procedures; lithic artifacts, faunal remains, and other cultural materials shall be identified and analyzed according to current professional standards.

F. Following laboratory analysis, the significance of the sites shall be evaluated according to the criteria of the California Register. The results of the investigations shall be presented in a technical report following the standards of the California Office of Historic Preservation (OHP) publication "Archaeological Resource Management Reports: Recommended Content and Format (1990 or latest edition)" (http://ohp.parks.ca.gov/pages/1054/files/armr.pdf).

G. Upon completion of the work, all artifacts, other cultural remains, records, photographs, and other documentation shall be curated by an appropriate curation facility. All fieldwork, analysis, report production, and curation shall be fully funded by the applicant.

H. If the resources meet California Register significance standards, the City shall ensure that all feasible recommendations for impact reduction of archaeological impacts are

incorporated into the final design and permits issued for development. Necessary Phase 3 data recovery excavation, conducted to exhaust the data potential of significant archaeological sites, shall be carried out by a qualified archaeologist meeting the Secretary of the Interior's PQS for archaeology according to a research design reviewed and approved by the City prepared in advance of fieldwork and using appropriate archaeological field and laboratory methods consistent with the OHP Planning Bulletin 5 (1991), Guidelines for Archaeological Research Design, or the latest edition thereof.

I. If recommended by a cultural resources assessment, prior to issuance of a grading permit and prior to the start of any ground-disturbing activity, the applicant shall retain a qualified archaeologist who meets the Secretary of the Interior's PQS to oversee an archaeological monitor who shall be present during construction excavations, such as demolition, clearing/grubbing, grading, trenching, or any other construction excavation activity associated with the project, including peripheral activities, such as sidewalk replacement, utilities work, and landscaping, which may occur adjacent to the project site. The frequency of monitoring shall be based on the rate of excavation and grading activities, the materials being excavated (younger sediments vs. older sediments), the depth of excavation, and, if found, the abundance and type of archaeological resources encountered. Full-time monitoring may be reduced to part-time inspections, or ceased entirely, if determined adequate by the qualified archaeologist. Prior to commencement of excavation activities, Archaeological Sensitivity Training shall be given for construction personnel. The training session shall be carried out by the qualified archaeologist and shall focus on how to identify archaeological resources that may be encountered during earthmoving activities and the procedures to be followed in such an event.

J. In the event that historic (e.g., bottles, foundations, refuse dumps/privies, railroads, etc.) or prehistoric (e.g., hearths, burials, stone tools, shell and faunal bone remains, etc.) archaeological resources are unearthed, ground-disturbing activities shall be halted or diverted away from the vicinity of the find so that the find can be evaluated. A 50-foot buffer within which construction activities shall not be allowed to continue shall be established by the qualified archaeologist around the find. Work shall be allowed to continue outside of the buffer area. All archaeological resources unearthed by project development activities shall be evaluated by the qualified archaeologist. If a resource is determined by the qualified archaeologist to constitute a "historical resource" pursuant to CEQA Guidelines Section 15064.5(a) or a "unique archaeological resource" pursuant to Public Resources Code Section 21083.2(g), the qualified archaeologist shall coordinate with the applicant and the City to develop a formal treatment plan that would serve to reduce impacts to the resources. The treatment plan established for the resources shall be in accordance with CEQA Guidelines Section 15064.5(f) for historical resources and Public Resources Code Sections 21083.2(b) for unique archaeological resources. Preservation in place (i.e., avoidance) is the preferred manner of treatment. If, in coordination with the City, it is determined that preservation in place is not feasible, appropriate treatment of the resource shall be developed by the qualified archaeologist in coordination with the City and may include implementation of archaeological data recovery excavations to remove the resource along with subsequent laboratory processing and analysis. Any archaeological material collected shall be curated at a public, non-profit institution with a research interest in the materials, if such an institution agrees to accept the material. If no institution accepts the archaeological material, they shall be donated to a local school, Tribe, or historical society in the area for educational purposes.

K. As applicable, the final Phase 1 Inventory, Phase 2 Testing and Evaluation, or Phase 3 Data Recovery reports shall be submitted to the City prior to issuance of construction permit. Recommendations contained therein shall be implemented throughout all ground disturbance activities.

Tribal Cultural Resources

4.15-1(a) Native American Consultation and Monitoring for Discretionary Projects

All discretionary projects that involve ground disturbing activities in previously undisturbed soils, shall prepare a cultural resources assessment and do a record search with a study area of no less than 0.5 mile around the project area. Projects conducted in culturally and historically sensitive areas, as determined by a Qualified Archaeologist meeting the Secretary of the Interior's Professional Qualification Standards for Archaeologist, should include a record search with a study area of no less than 1 mile around the project area.

Notification shall be provided to California Native American tribes that are traditionally and culturally affiliated with the geographic area of the project site and have submitted a written request to the Department of City Planning to be notified of proposed projects in that area. Should projects have potential to impact cultural resources, as determined during the environmental assessment or Tribal consultation, a Cultural Resources Monitoring Program (CRMP) shall be prepared by Qualified Archaeologist, in consultation with all interested Tribes, prior to the commencement of any and all ground disturbing activities for the Project, including any archaeological testing. The CRMP shall include compliance with 4.15-1(b) and will provide details regarding the process for infield treatment of inadvertent discoveries and the disposition of inadvertently discovered non-funerary resources and shall be consistent with the treatment of unique archaeological resources in PRC 21083.2.

4.15-1(b) Discovery of Potential Tribal Cultural Resources

In the event that Tribal Cultural Resources are discovered during Project activities, whether or not a tribal monitor is present, and there is no CRMP or the CRMP does not cover treatment of inadvertent discovery, all work within a 50-foot buffer of the find shall cease and a Qualified Archaeologist meeting the Secretary of the Interior's Professional Qualification Standards for Archaeology shall assess the find. Tribes that are culturally and historically affiliated with the Project area and have requested consultation shall be notified, should any potential tribal cultural resource be discovered during project implementation. Construction personnel shall not collect or move any tribal resources. Construction activity may continue unimpeded on other portions of the project site. Unless agreed otherwise during the tribal consultation process or in a CRMP, if tribal cultural resources are discovered during construction, the applicant and/or owner shall retain a Qualified Tribal Monitor (as approved by the Tribe) if requested by the Tribe. Any and all archaeological/cultural documents created as a part of the Project (isolate records, site records, survey reports, testing reports, and monitoring reports) should be provided to consulting Tribes. Any tribal cultural resources discovered shall be treated with appropriate dignity and protected and preserved as appropriate with the agreement of the Tribal Representative and in accordance with federal, state, and local guidelines. If not otherwise provided in the CRMP, the Lead Agency and/or applicant shall, in good faith, provide all consulting Tribes the opportunity to consult on the disposition and treatment of resources. The location of the find of tribal cultural resources and the type and nature of the find will not be published, except to provide information to the

Qualified Archaeologist, tribal representatives, and public agencies with jurisdiction or responsibilities related to the resources. An agreement will be reached with the Tribal Representative to mitigate or avoid any significant impacts to identified tribal cultural resources. Absent an agreement with the Tribal Representative, as provided in Public Resources Code Section 21083.2, the find should be preserved in place or left in an undisturbed state unless the Project would damage the resource. When preserving in place or leaving in an undisturbed state is not possible, excavation should not occur until testing or studies prepared by a Qualified Archaeologist have adequately documented the recovery of scientifically consequential information from and about the resource. Construction activity may continue unimpeded on other portions of the project site if cleared by the Qualified Tribal Monitor or Qualified Archaeologist. Ground Disturbance Activities in the area where resources were found may commence once the identified resources are properly assessed and processed by a Tribal Representative or, if no Tribal Representative is identified, a Qualified Archaeologist.

The measure shall be shown on plans.

METHODS

California Historical Resources Information System Records Search

Archaeological studies and resource records are managed in California as part of the CHRIS. Physical copies of reports and resource records and digital data are retained at multiple information centers that collectively manage the CHRIS for specific counties. Records for Los Angeles County are maintained by the SCCIC, which is located at California State University, Fullerton. Each information center also maintains the Archaeological Determinations of Eligibility list (OHR Directory of Historic Properties Data File), and has access to the NRHP, CRHR, California Points of Historical Interest, California Historical Landmarks, and California State Inventory of Historic Resources. A non-confidential CHRIS search conducted through an information center will identify the number of resources and reports for a specified area and a selected radius but omits any information that reveals the confidential location or contents of archaeological resources. A confidential CHRIS records search includes copies of all records and is made available only to authorized users who meet criteria defined by the California OHP.

Prior studies and resources are assigned unique identifiers in the CHRIS, and spatial data are recorded on paper maps and/or in a geographic information system (GIS). The identifiers for prior studies and resources incorporate codes specific to each county. The identifier assigned to all cultural resources is known as the primary number and is indicated by a letter prefix ("P") that includes a county code (Los Angeles County is 19) followed by a sequential six-digit number, e.g., P-19-000001. Cultural resources with archaeological components (i.e., archaeological resources) are given a second designation, referred to as a trinomial. The trinomial incorporates a state and county code ("CA-LAN" for Los Angeles County) followed by a number, which may be the same as the digit used in the primary number but could also vary. Archaeological resources that are exclusively historic in age are given an additional suffix, "H", e.g., CA-LAN-169H. Archaeological resources containing both prehistoric- and historic-era components are designated with the suffix "/H", e.g., CA-LAN-7/H. Archaeological resources that are exclusively prehistoric in age will not have either suffix. For this report, all archaeological sites will be referenced by their trinomial number, and for ease of reference the "CA-" prefix is excluded, e.g., CA-LAN-1 is referred to as LAN-1. Sites that are not assigned a trinomial are referenced here using their primary number.

For this study, SWCA requested a search of the CHRIS from the SCCIC that included any previously recorded archaeological resources and any cultural resource investigations within a 0.8 km (0.5-mile) radius of the Development Area. The CHRIS records search also included a review of the NRHP, the CRHR, California Points of Historical Interest list, the California Historical Landmarks list, the Archaeological Determinations of Eligibility list (OHR Directory of Historic Properties Data File), the City's HCM list, and the California State Inventory of Historic Resources. The results of the CHRIS search were summarized in a digital letter from the SCCIC dated February 8, 2024, which is provided in Appendix A, and attachments containing database records and confidential GIS data.

Sacred Lands File Search

The NAHC is charged with identifying, cataloging, and protecting Native American cultural resources, which includes ancient places of special religious or social significance to Native Americans, and known ancient graves and cemeteries of Native Americans on private and public lands in California. The NAHC's inventory of these resources is known as the SLF. In addition, the NAHC maintains a list of tribal contacts affiliated with various geographic regions of California. All outreach to tribe was conducted as part of the notification process conducted pursuant to MM 4.15-1(a) of the MMP from the Program EIR and is described below. The contents of the SLF are strictly confidential, and SLF search requests return positive or negative results in addition to a list of tribal contacts with affiliation to the specified location. A letter from the NAHC summarizing the results of the records search is provided in Appendix B.

Archival Research

Concurrent with the confidential CHRIS records search, SWCA reviewed property-specific historical and ethnographic context research to identify information relevant to the Development Area. Research focused on a variety of primary and secondary materials relating to the history and development of the Project Site and Development Area, including historical maps, aerial and ground photographs, ethnographic reports, and other environmental data. Archival research focused on assessing the general sequence of developments within the Development Area and vicinity beginning in the nineteenth century. Aerial photographs were used to help assess the setting of the Development Area from 1927 to the present.

Sources consulted included the following publicly accessible data sources: OHR (SurveyLA); David Rumsey Historical Map Collection; Early California Cultural Atlas (Native American villages and placenames [Hackel et al. 2015]); Huntington Library Digital Archives; Library of Congress, Los Angeles Public Library Map Collection; Los Angeles Public Library (maps and photographs); Sanborn Fire Insurance Company maps (Sanborn maps); USGS historical topographic maps; University of California, Santa Barbara Digital Library (aerial photographs); and University of Southern California Digital Library.

In addition to the above, SWCA reviewed the results of a geotechnical investigation conducted for the Project by Group Delta (Bueno and Tsai 2023). Group Delta reviewed past geotechnical investigations conducted near the Development Area, conducted limited subsurface boring, identified the sediments within the Development Area, and offered a preliminary assessment of the geophysical conditions.

Archaeological Sensitivity Analysis

SWCA assessed the potential for the presence of an unidentified resource in the form of a buried archaeological site, which includes tribal cultural resources that are archaeological in nature.[2] That determination considers historical use of the Development Area and vicinity broadly and the physical setting specifically, including an assessment of whether the setting is capable of containing buried archaeological material, and finally, characterizing the potential for a buried resource. Lacking any data specifically gathered to assess the presence or absence of archaeological material below the surface, the resulting sensitivity is by nature qualitative, ranging along a spectrum of increasing probability for encountering such material, designated here as low, moderate, and high.

SWCA assessed the sensitivity of the Development Area to contain Native American archaeological resources, as well as non-Native American (i.e., historical) archaeological resources. Specific factors are considered for each respective resource type. For Native American archaeological resources, a primary consideration is assessing whether an area provided favorable conditions for short term or seasonal habitation at various time intervals during the Terminal Pleistocene and Holocene. This is assessed by analyzing the following: proximity to natural features (e.g., perennial water source, plant or mineral resource, animal habitat) and other known Native American archaeological sites; topography and hydrology to assess whether the area provided relatively level ground and dry conditions; and viewshed to assess whether the location offered a prominent view for either practical or ceremonial purposes. These assessments rely on historical ecological reconstructions for vegetation, hydrology, topography, and paleoenvironmental data; therefore, the resulting sensitivity assessment may vary in its resolution over time and from region to region.

Assessing historical archaeological resource sensitivity relies more exclusively on archival research that indicates past land uses, as well as reports of archaeological discoveries, whether in public sources (e.g., newspapers, newsletters) or historical archaeological sites in the CHRIS records. Where soils data have been collected (e.g., during geotechnical sampling), the presence of common archaeological materials (e.g., bricks, glass, and/or building materials) in geotechnical bores may suggest an increased likelihood for a buried historical archaeological resource; the presence of a stratum designated as fill in the geotechnical testing may indicate the overall area in which such resources could be preserved below ground. For areas that were vacant during the nineteenth and/or twentieth centuries, land uses in areas directly adjacent or in reasonable proximity are also considered in terms of the types of activities and material remains that may have been deposited within the open space. Land use history is also considered in terms of its potential to destroy, displace, or otherwise diminish the potential for a buried archaeological resource of a previous time that may have once been present.

For purposes of the current study, high archaeological sensitivity is defined as any area with a favorable setting for Native American habitation or temporary use, documentation of historical occupation(s), soil conditions capable of preserving buried material, and little to no disturbances. Areas lacking these traits are considered to have low sensitivity. Areas with a combination of these traits are considered as having moderate sensitivity.

Outreach to California Native American Tribes

MM 4.15-1(a) of the MMP from the Program EIR includes a provision requiring the applicant of an individual project to provide notification to California Native American tribes who are traditionally and culturally affiliated with the geographic area of a given project site and have submitted a written request

[2] Hereafter, all references to Native American archaeological resources are assumed to also apply to tribal cultural resources that are archaeological in nature but will not be referenced as such.

to City Planning to be notified of a proposed project in that area. The notification is intended to provide information on the proposed project and request information concerning the presence of a tribal cultural resource or likelihood for a potential tribal cultural resource as a means of informing the analysis of the potential for impacts to a tribal cultural resource. The outreach process established under the Housing Element CEQA Streamlining Checklist is informational in nature and not intended as government-to-government consultation in the manner required for AB 52 tribal consultation. However, informational outreach pursuant to MM 4.15-1(a) was conducted based on the City's AB 52 consultation list (including tribal contact information provided by the NAHC, updated as of 10/24/2022), and any information provided by tribes is still subject to the confidentiality protections provided under PRC Section 21082.3(c).

SWCA sent written notification letters to 10 contacts representing nine (9) California Native American tribes. The notifications provided information on the Project and the environmental review process being undertaken through the City's Housing Element CEQA Streamlining process. The letters requested that any responses be received no more than 2 weeks after receipt of the letter. The notifications were printed and sent via certified mail through the U.S. Postal Service. An electronic copy of the letters was submitted to one contact via email because the written notification was returned as undeliverable. The notifications were mailed on July 18, 2025, and delivered July 21–25. The requested response period ended on August 8, 2025. Copies of the notification letter and certified mail receipts are included here in Appendix C. All confidential materials from the correspondence are included in Appendix D, which is excluded from publicly circulated drafts of this report.

ENVIRONMENTAL SETTING

The Development Area is in the northwestern portion of the Los Angeles Basin, a broad, level plain defined by the Pacific Ocean to the west, the Santa Monica Mountains and Puente Hills to the north, and the Santa Ana Mountains and San Joaquin Hills to the south. This extensive alluvial wash basin is filled with Quaternary alluvial sediments deposited as unconsolidated material eroded from the surrounding hills. Over millions of years, the basin has experienced episodes of subsidence, deposition, uplift, erosion, and faulting, all of which have resulted in very complex geology, as well as oil deposits and abundant fossils (Ingersoll and Rumelhart 1999; Lamar 1970; Yerkes et al. 1965). The surface of the basin slopes gently southwestward toward the ocean, interrupted in various places by low hills and traversed by several large rivers (Yerkes et al. 1965). The Development Area is situated in the former plain of the Los Angeles River. Topographically, the setting is characterized as an open aspect plain with a very gradual slope to the south. The Development Area is at an elevation of approximately 87.5 to 88.7 meters (m) (287–291 feet) above mean sea level. The Pacific Ocean shoreline is approximately 21.91 km (13.62 miles) to the west of the Development Area.

Geology and Soils

According to geologic mapping by Campbell and others (2014), Late Pleistocene young alluvium, Unit 2 (Qya_2) is present across the entire Development Area (Figure 5). The Late Pleistocene (or Terminal Pleistocene) marks the end of the last glacial period, which occurred around 11,000 to 12,000 years ago and transitioned into the comparatively warmer period known as the Holocene (Campbell et al. 2014). The Qya_2 unit consists of unconsolidated, generally friable, stream-deposited silt, sand, and gravel on flood plains, locally including related alluvial fans and streambeds. Although the area mapped by Campbell and colleagues as Qya_2 generally consists of sediments with similar physical characteristics and ages, there are smaller scale deposits of Holocene-aged deposits contained within the sedimentary unit. In at least one case, a piece of human bone dated to the Middle Holocene was identified beneath more than 20 feet of alluvium within the Qya_2 unit.

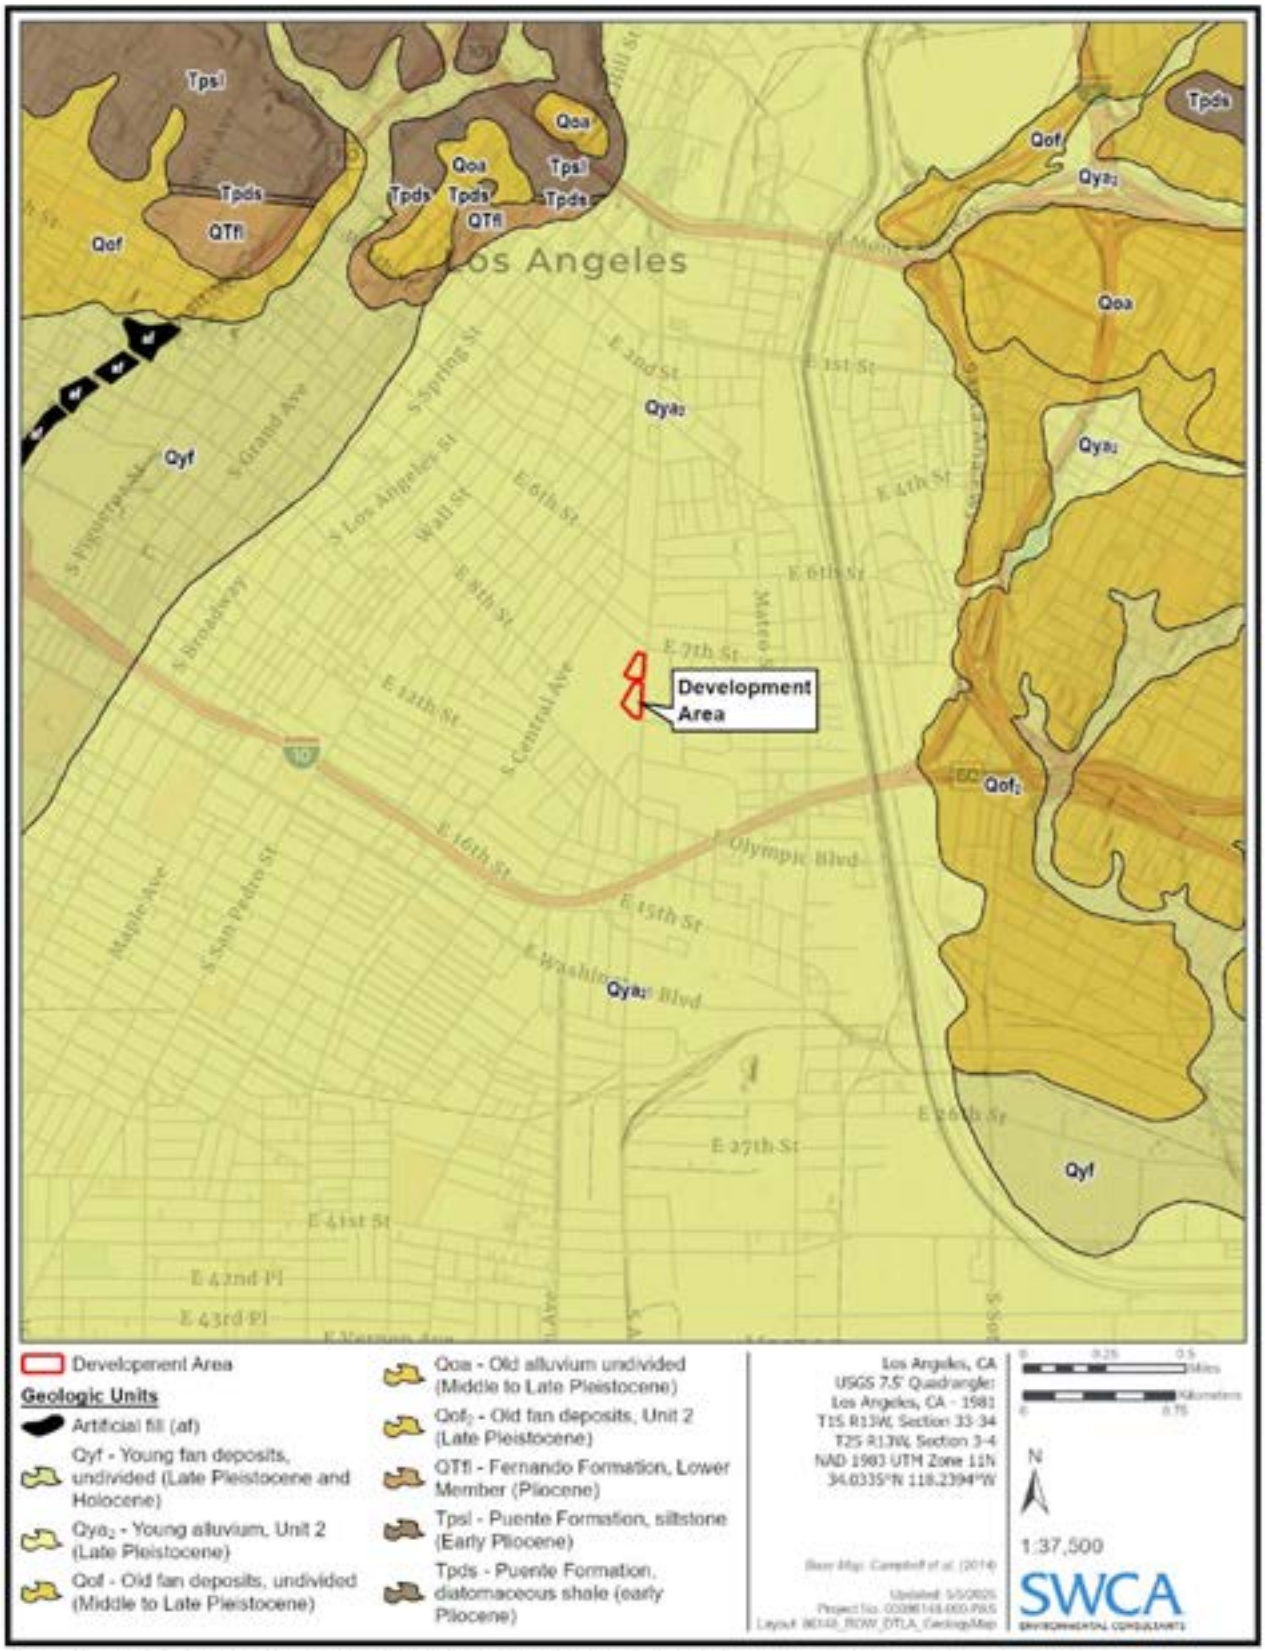

Figure 5. Surficial geology from Campbell et al. 2014. The Development Area is in a unit designated as Young Alluvium (Qya_2), which formed during the Late Pleistocene.

Old fan deposits in the region consist of gravel, sand, silt, and clay deposited along alluvial fans off the Santa Monica Mountains and are moderately to well consolidated and slightly to well cemented (Campbell et al. 2014; Dibblee 1991). There are comparatively older alluvial sediments formed in the Middle to Late Pleistocene—Old Alluvium (Qoa, Qof)—that are mapped as surface deposits to the east of the Development Area and likely underlay the Qya_2 unit, although the depth is likely to be highly variable and difficult to determine from sediment profiles.

Further detail on the sub-surface conditions was obtained through a geotechnical investigation of the Development Area conducted in 2023 by Group Delta, which involved drilling seven hollow-stem auger bores, performing eight cone penetration tests, and completing an analysis of the results. A technical memorandum for the Project with the preliminary results of the investigation indicates that up to 5 feet of undocumented fill was encountered in the borings taken across the Development Area (Bueno and Tsai 2023:1). Brick fragments were noted within the surficial fill stratum in all the bores.

Beneath the surficial fill are loose sediments down to a depth of 8 and 12 feet in the areas of Buildings A-B and Building C, respectively. The total depth of the bores ranged from 30 to 50 feet below grade. The loose sediments beneath the fill and the denser sands described below 15 feet appear to be composed of naturally deposited alluvium accumulated as flood plain deposits. Flood plain deposits from the Los Angeles River typically exhibit variations in the sequence of high- and low-energy depositional events. The alluvium consisted of various substratum composed of silty sand, poorly graded sand with silt, and well graded sand, which alternated in their stratigraphic sequence. Gravel content was generally low and did not exhibit much variation with depth. When present, the gravels were noted as being fine. Based on the sediment composition described in the geotechnical bore logs, there does not appear to be any evidence of high energy alluvial deposition. The sequence of silt and sand deposits are consistent with medium to low energy deposition from seasonal flooding along the Los Angeles River.

Hydrology

Several major watercourses drain the Los Angeles Basin, including the Los Angeles, San Gabriel, and Santa Ana Rivers and Rio Hondo. Flood events such as those recorded in the nineteenth and early twentieth centuries have produced massive deposits of alluvial sediments within the floodplain of the Los Angeles River, as well as the other major drainages in the Los Angeles Basin. Alluvial terraces formed where flooding water eroded uplifted landforms. In the area of Downtown Los Angeles, the backslopes in the location of Bunker Hill delineate the edge of the historical floodplain for the Los Angeles River. The south-flowing Los Angeles River is currently approximately 1.06 km (0.66 miles) west of the Development Area.

Historically, the primary channel of the Los Angeles River shifted its course multiple times within the Los Angeles Basin, oscillating between its current southerly course and one that flowed to the west from a point near the downtown area and then along the current course of Ballona Creek. Gumprecht (2001) plotted a speculative route for the former westerly courses and some of the shifts reported in the nineteenth century (Figure 6). Among the first recorded shifts is a shift that occurred in 1815 when floodwaters overflowed the former channel, shifting the course at least 0.8 km (0.5 mile) to the southwest, near the present route of Spring Street, and possibly flowing over or immediately adjacent to the existing Development Area. That flood is reported to have destroyed structures built as part of the original Los Angeles Pueblo (Gumprecht 2001:139–141) and may have also flooded all or parts of the Native American village site of Yaanga, which is believed to have been located nearby (see below, Native American Communities in Los Angeles).

Figure 6. Historical shifts in the Los Angeles River channels based on Gumprecht (2001:140) and areas of inundation.

Some shifts were more dramatic, changing by 90 degrees and altering the course of the river to the ocean. Before 1825, the river flowed west from what is now downtown Los Angeles and discharged into the Ballona Wetlands in what is now Playa del Rey. The river followed a western course approximated by Washington Boulevard and then turned southwest at the Baldwin Hills, flowing along the northwest-facing side of the slopes—the course now occupied by Ballona Creek (Gumprecht 2001:17). Heavy rains in 1825 caused the channel to overflow its banks and the Los Angeles River shifted its course fully south, emptying into the bay near San Pedro, where the river has discharged ever since. In subsequent years, the river would frequently shift its course within the southern floodplain, which in some areas measures up to 2 miles wide (Gumprecht 2001:16). However, these more dramatic shifts between the western and southern routes are likely to have occurred during most of the life of the watercourse, and certainly over during the last 13,000 years—the period in which there is evidence for Native Americans in southern California.

Flora and Fauna

The Development Area is in a fully urbanized setting and is devoid of natural vegetation and natural habitat for most endemic animal species. Even before the urbanization of the twentieth century, the ecology of the Los Angeles prairie had undergone a transformation during the preceding century as a result of ranching and agricultural practices that accompanied European settlement (see Schiffman 2005). Although there are fewer surviving examples of the pre-settlement ecology in the lower elevations compared with those of the surrounding hillsides, various attempts have been made to reconstruct the historical ecology of the Los Angeles Basin. Schiffman provides a cohesive summary of the vegetation structure and species composition for the Los Angeles Basin:

> Most steep hillsides were covered by impenetrably dense evergreen chaparral shrubs such as California lilac (*Ceanothus* spp.), chamise (*Adenostoma fasciculatum*), scrub oak (*Quercus berberidifolia*), and manzanita (*Arctostaphylos* spp.) or sparsely shrubby and drought deciduous coastal sage scrub vegetation that included buckwheat (*Eriogonum fasciculatum*), sages (*Salvia* spp.), and sagebrush (*Arternisia californica*). In contrast to the shrubby hills and mountain slopes the dense, clayey soils of the flat valleys and plains supported a diverse prairie vegetation of colorful ephemeral wildflowers mixed with grasses and other plants of low stature. In addition, woodlands of walnut (*juglans californica*) and oak (*Quercus agrifolia* and *Q. lobata*) were found in canyons and on some hillsides, and broad corridors of willow (*Salix* spp.), alder (*Alnus rhombifolia*), sycamore (*Platanus racemosa*), and mulefat (*Baccharis salicifolia*) lined the river floodplains and feeder creeks that dissected the landscape. (Schiffman 2005)

Küchler defined vegetation communities for the region, and the Development Area is situated in the unit designated as coastal sagebrush (Küchler 1977). In addition to the species Schiffman references, those found in the coastal sagebrush unit also include California aster (*Corethrogyne filaginifolia*), golden bush (*Isocoma menziesii*), coyote brush (*Baccharis pilularis*), encelia (*Encelia californica*), fuchsia-flowered gooseberry (*Ribes speciosum*), and monkey flower (*Mimulus aurantiacus*).

Along with the natural resources found within the inland environments, Native American communities in the Los Angeles Basin would have had access to plant, animal, and lithic resources along the coast and surrounding hills and mountains. Descriptions of these ecological conditions and the associated Native American uses of resources found therein is described elsewhere. For example, Lightfoot and Parrish (2009:253–277) provide a summary for coastal and inland settings for the southern California, an overview of the Santa Monica Mountains is included in King's (2011) report, and coastal environments are addressed in numerous studies such as those by Byrd and Raab (2007), Erlandson (1994), and Gamble (2008).

CULTURAL SETTING

Native American Archaeological Record

Over the years, researchers have devised numerous prehistoric chronological sequences to aid in understanding cultural changes at various scales (i.e., regional vs. local patterning) in southern California. California prehistory is generally divided into three broad temporal periods (i.e., Paleoindian, Archaic, and Emergent periods; see Fredrickson 1973, 1974, 1994) that reflect similar cultural characteristics throughout the state and were generally governed by climatic and environmental variables, such as the drying of pluvial lakes at the transition from the Paleoindian to the Lower Archaic. Numerous chronological sequences were also devised to characterize cultural changes on a smaller scale, within the subregion of southern California specifically.

Building on early studies and focusing on data synthesis and artifact types, Wallace (1955, 1978) developed a prehistoric chronology for the southern California coastal region that is still widely used today and is applicable to near-coastal and some inland areas. Wallace's prehistoric chronology for southern California was composed of four sequential horizons: Horizon I, Early Man; Horizon II, Milling Stone (hereafter Millingtstone); Horizon III, Intermediate; and Horizon IV, Late Prehistoric (Late Period). Although Wallace's 1955 synthesis initially lacked chronological precision due to a paucity of absolute dates (Moratto 1984:159), this situation has been alleviated by the availability of thousands of radiocarbon dates obtained by southern California researchers in the last several decades (Byrd and Raab 2007:217). As such, several revisions were subsequently made to Wallace's 1955 synthesis using radiocarbon dates and projectile point assemblages resulting in more refined chronologies and sequences (e.g., Koerper and Drover 1983; Koerper et al. 2002; Mason and Peterson 1994; see also Moratto 1984).

Additional primary syntheses for southern California prehistory were developed by Warren (1968) and King (1981, 1990), which used the growing archaeological datasets of specific subregions within southern California to define increasingly localized cultural sequences. Using the concepts of cultural ecology and cultural tradition, Warren (1968) proposed a series of six prehistoric traditions. Three of these traditions, the San Dieguito Tradition, Encinitas Tradition, and Campbell Tradition, correlated with Wallace's Horizons I, II, and III; and the Chumash Tradition, Takic Tradition (formerly "Shoshonean"), and Yuman Tradition are represented in Wallace's Horizon IV. These ecologically based traditions are applicable to specific regions within southern California. King (1981, 1990) later modified Wallace's (1955, 1978) sequence into three major periods of Chumash regional prehistory—Early, Middle, and Late—each of which contains phases or subphases. King's synthesis is based on stylistic changes in artifacts, particularly shell beads and ornaments, from Santa Barbara Channel burial assemblages, which he used to interpret the continuity in development of artifacts as an indication that Chumash culture developed locally in the last ~7,500 years. Arnold (1992) expanded King's chronology by adding a distinct Middle-to-Late Transition period, lasting from A.D. 1150 to 1300.

More recent efforts to synthesize various Native American archaeological chronologies for southern California incorporate geological time periods as a way of standardizing the terminology and emphasizing the correlation between human behavior and changes in the environment across different climatic periods. Figure 7 provides a reference point for the primary periods and cultural traditions discussed below along with chronologies denoted by "years before present" (BP) and calendar ages (B.C. and A.D.).[3]

[3] Elsewhere in this report uncalibrated radiocarbon ages are presented as radiocarbon years B.P. and their calibrated dates are expressed as cal BP

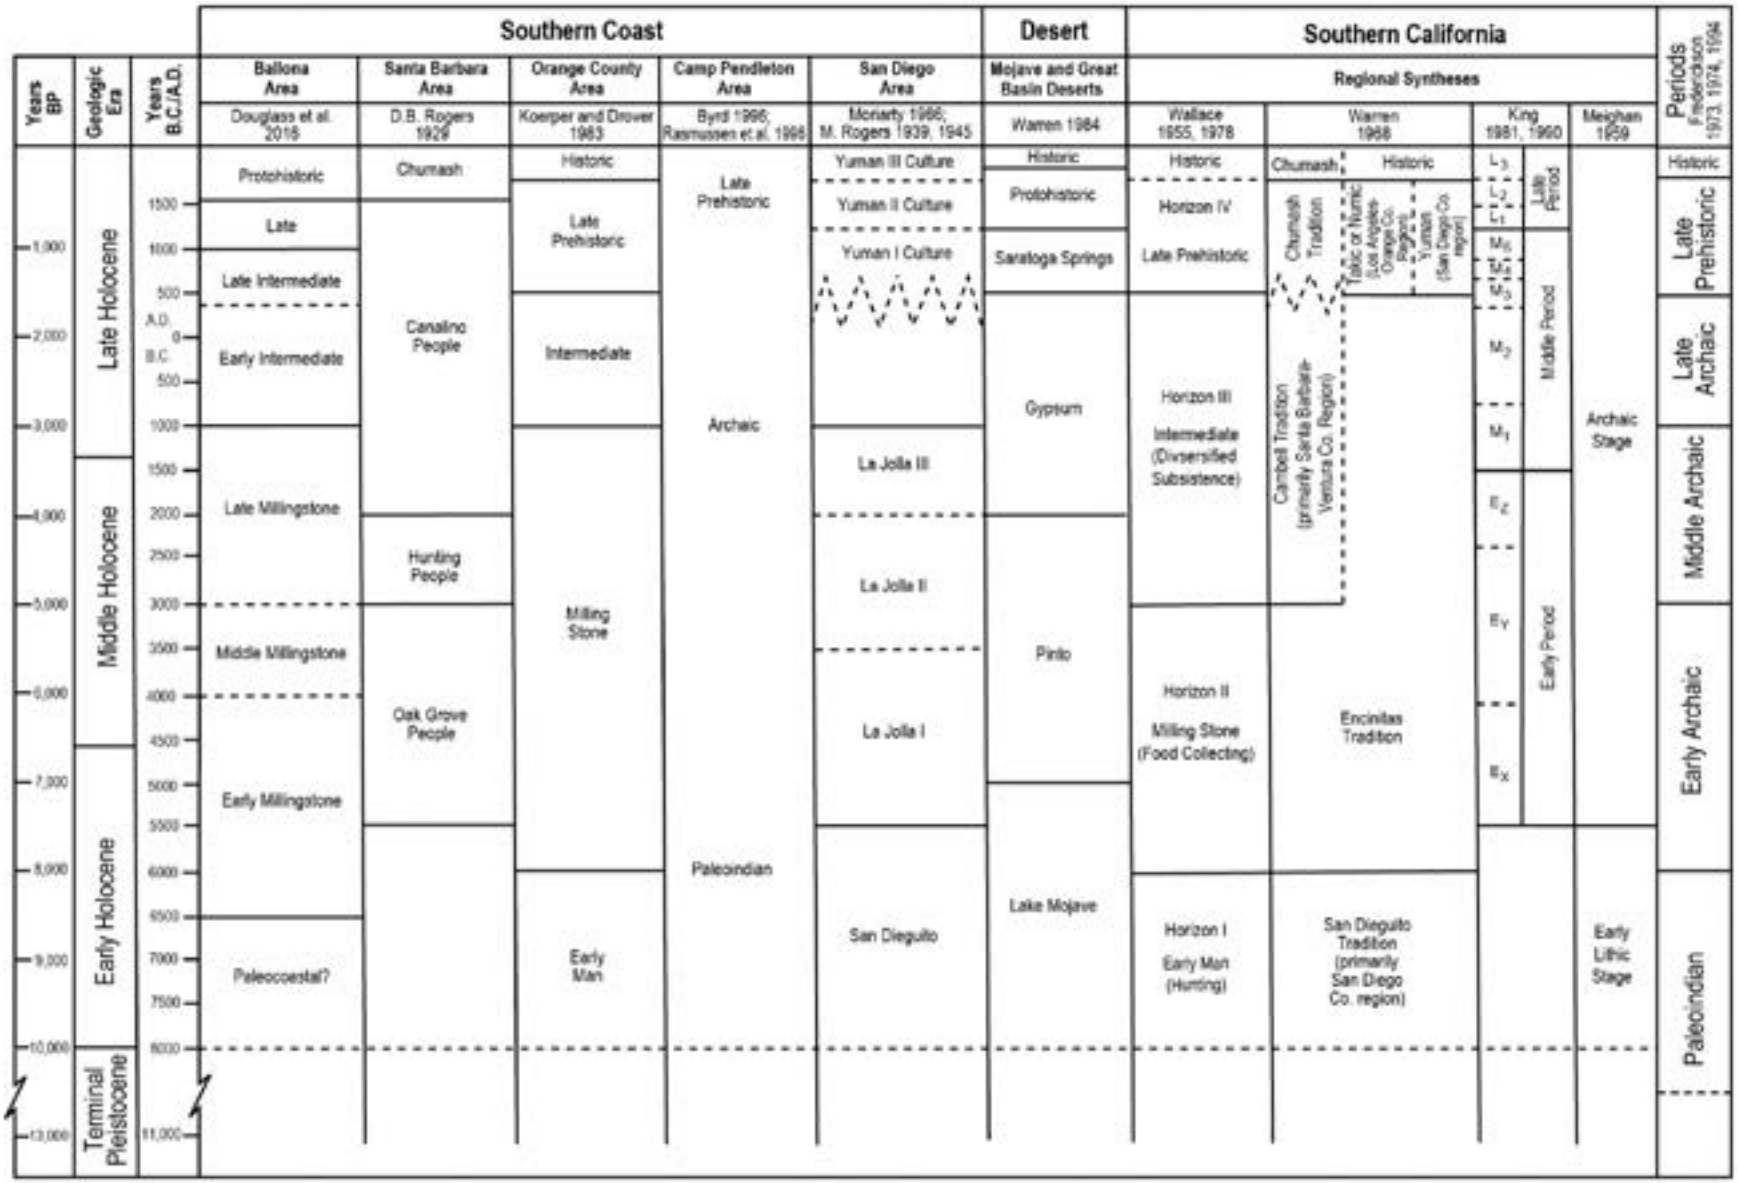

Figure 7. Chronological frameworks for southern California cultural traditions and archaeological contexts.

Terminal Pleistocene: Paleoindian / Paleocoastal Tradition (Before 11,700 BP)

Any discussion of human occupation of coastal areas during the Terminal Pleistocene (before 11,500 BP) must be prefaced with an understanding that sea level rise during this period of severely shifting climate inundated many kilometers of shoreline worldwide and along southern California coastlines specifically, submerging an unknown number of archaeological sites (i.e., Reeder-Myers et al. 2015). Therefore, any evidence that we do have of human occupation in what are now coastal settings is likely only a small fraction of what originally existed (see Erlandson et al. 2007, 2015).

The earliest evidence for human occupation in southern California is found on the northern Channel Islands, where multiple Terminal Pleistocene sites have been identified and dated in the past couple decades, firmly establishing the presence of early coastal-adapted people in the region (Erlandson et al. 1996, 2011, 2020; Erlandson and Braje 2008; Erlandson and Colton 1991). On Santa Rosa Island, human remains have been dated from the Arlington Springs site to approximately 13,000 years ago (Johnson et al. 2002). Recent excavations and radiometric dating of multiple archaeological assemblages on San Miguel, Santa Rosa, and Santa Cruz islands document Paleoindian technologies, subsistence strategies, and seasonality of site occupation during the latter part of the Terminal Pleistocene (~11,700 BP), with similarities to the Western Stemmed Tradition found across much of western North America (Braje et al. 2013; Erlandson 2013; Erlandson et al. 1987, 2011, 2020; Erlandson and Braje 2008; Jew et. al 2013; Rick et al. 2013).

Finely crafted chipped stone crescents like those recorded on the northern Channel Islands as part of the Paleocoastal toolkit were also found in surficial contexts on San Nicolas Island, suggesting an earlier occupation for the southern Channel Islands as well (Davis et al. 2010). It is possible that similarly early sites were present on the mainland California coast as well; however, the rate and degree of development beginning with Spanish colonization and continuing to the present has likely destroyed most early sites along the California mainland coast. Nevertheless, three fluted points representing the Clovis culture have been found in southern California mainland coastal areas, including one in Santa Barbara County (Erlandson et al. 1987), one in Los Angeles County near Malibu (Stickel 2000), and one in El Morro Canyon, in what is now Crystal Cove State Park in Orange County (Fitzgerald and Rondeau 2012). Additionally, numerous fluted projectile points of the Clovis and Folsom Traditions have been reported from inland contexts in central and southern California (e.g., Davis 1975; Dillon 2002; Moratto et al. 2011; Riddell and Olsen 1969; Rondeau 2006; Yohe II and Gardner 2016).

Early Holocene (~11,700 to 7000 BP)

HORIZON I: EARLY MAN

During the early twentieth century, several sensationalized finds were thought to be evidence of "Early Man" in the Los Angeles Basin; however, subsequent analyses have not held up as hoped. First, in 1914 human remains were found in direct association with extinct Pleistocene fauna at the La Brea Tar Pits (LAN-159/H) (Merriam 1914). Though early estimates suggested that this find extended up to 34,000 years ago, radiocarbon dating has since shown these remains to have an estimated age range of approximately 9,000 to 4,450 BP (Berger et al. 1971; Payen 1970), with the most recent redating using accelerator mass spectrometry (AMS) providing a calibrated[4] date range of ~10,200 cal BP (Fuller et al. 2016), placing this individual at the transition between the Paleocoastal/Paleoindian period and the Millingstone period. A second early discovery at Angeles Mesa in Baldwin Hills (the Haverty, or Angeles

[4] Uncalibrated radiocarbon ages are presented as radiocarbon years B.P. and their calibrated dates are expressed as cal B.P.

Mesa site, LAN-171) included partially mineralized skeletal remains of several individuals found in depths up to 7 m below surface (Brooks et al. 1990; Stock 1924). Issues with the various methods used to date these bones remain unresolved, however, and analyses have returned estimated dates of more than 50,000 years ago based on amino acid racemization (Taylor et al. 1985) and radiocarbon date ranges that span 3,870 ± 350 to 15,900 ± 50, representing an unacceptably large margin of error for a single individual (Berger et al. 1971; Brooks et al. 1990). There are similar concerns related to the age of remains referred to as "Los Angeles Man"—designated as LAN-172 (Lopatin 1940)—which were discovered in a similar depositional context less than 2 miles from the Haverty site in 1936 (Brooks et al. 1990; Erlandson et al. 2007:54).

Mainland sites attributed to Horizon I generally indicate that the economy was a diverse mixture of hunting and gathering, with a major emphasis on aquatic resources in many coastal areas (e.g., Jones et al. 2002) and a greater emphasis on large-game hunting inland. Fundamental elements of lithic tool technology described by Wallace (1955) for this period include numerous scrapers, choppers, chipped and notched crescents, and large blades and points. Wallace (1955) also describes clam shell and bone beads, along with an absence of seed grinding implements from the site type for this period, Malaga Cove. Several sites in Orange and San Diego Counties contain components that date between 9,000 and 10,000 years ago (Byrd and Raab 2007:219; Macko 1998a:41; Mason and Peterson 1994:55–57; Sawyer and Koerper 2006), and radiocarbon dates from the Goleta Slough area in Santa Barbara County indicate occupations spanning ca. 9300–8400 cal BP (ca. 7300–6400 B.C.) with a primary subsistence focus on lagoon/bay shellfish (Owen et al. 1964).

Middle Holocene (7000 to 4000 BP)

HORIZON II: MILLINGSTONE

The Millingstone horizon corresponds to the Early Holocene when rising sea levels continued to encroach on coastlines, though global climate was slowly stabilizing. Set during a warmer and drier climatic regime than the previous horizon, the Millingstone horizon is characterized by subsistence strategies centered on collecting plant foods and small animals, though in coastal areas where archaeological assemblages have been preserved there is also ample evidence of marine resource use during this time as well (Connolly et al. 1995; Rick et al. 2001). The importance of seed processing is apparent in the dominance of stone grinding implements in archaeological assemblages from this period, namely milling stones (metates) and hand stones (manos) (Erlandson 1991, 1994; Moriarty 1966; Warren 1967). The variety of site types from this period indicate a mobile settlement pattern, and recent research indicates that Millingstone horizon food procurement strategies varied in both time and space, reflecting divergent responses to variable coastal and inland environmental conditions (Byrd and Raab 2007:220).

Millingstone assemblages are characterized by the extensive use of milling implements (particularly manos and metates) and mullers along with scraper planes, choppers, and core tools and a general lack of finely crafted projectile points, though leaf-shaped points believed to be darts are present. The general lack of faunal remains along with bone and shell tools at some sites dated to this period have led researchers to suggest a stronger reliance of plant food resources (i.e., seeds) with only a minor focus on hunting. Several sites have been described for this horizon throughout southern California, including Little Sycamore in Ventura, Porter Ranch in San Fernando, and the La Jolla shellmounds in San Diego. Los Angeles County sites with Millingstone components include Malaga Cove (Level 2, LAN-138; Walker 1952), the Tank Site (LAN-1) in Topanga Canyon (Heizer and Lemert 1947; Treganza and Bierman 1958), the Zuma Creek site (LAN-174; Wallace 1955; see also Ascher 1959), the Sweetwater Mesa site (LAN-267; King 1967), the Shobhan Paul site (LAN-958; Porcasi and Porcasi 2006; Salls 1995); and the Parker Mesa site (LAN-215; King 1962). Primary sites with Millingstone components

in Orange County include Bolsa Chica (ORA-83; Herring 1961, 1968), ORA-64 (Drover et al. 1983; Macko 1998b), and the Landing Hill site (Cleland et al. 2007).

HORIZON III: INTERMEDIATE

This horizon corresponds with the Middle Holocene and early Late Holocene time periods geologically and marks the point when current shorelines were established in most parts of the world. Consequently, evidence for marine resource use appears to increase after 5,000 to 6,000 years ago. The Intermediate horizon is characterized by a shift toward a hunting and maritime subsistence strategy, along with a wider use of plant foods. An increasing variety and abundance of fish, land mammal, and sea mammal remains are found in sites from this horizon along the California coast. Related chipped stone tools suitable for hunting, including side-notched projectile points, are more abundant and diversified, and shell fishhooks became part of the toolkit during this period. Mortars and pestles became more common during this period, gradually replacing manos and metates as the dominant milling equipment and signaling a shift away from the processing and consuming of hard-shelled seed resources to the increasing importance of fleshier fruits like the acorn (e.g., Glassow et al. 1988; True 1993).

Technological markers described by Wallace (1955) for this horizon consist of basket-hopper mortars, mortar and pestle, diverse and plentiful chipped stone assemblages with broad leaf-shaped blades and heavy often stemmed projectile points, bone and antler tools are present to some degree but not in the quantity seen during later phases, along with occasional use of bitumen (asphalt) and steatite. Faunal assemblages often include terrestrial mammals representing wild game, along with some marine mammal bones and often high densities of shellfish remains.

The Middle Holocene also marks a time of cultural innovation in the archaeological record of California. Significant cultural developments are seen in the increasing formation of larger settlements, the intensification of long-distance trade networks including distinct cultural spheres throughout western North America, and the elaboration of art and personal aesthetics (e.g., shell and stone pendants and increasing variety of shell bead types and styles) (Erlandson and Glassow 1997; Glassow 1997; Howard and Raab 1993; Jenkins and Erlandson 1996; King 1990; Raab and Howard 2002; Vellanoweth 2001).

There is also evidence suggesting migrations into coastal southern California by desert peoples from the east during the Intermediate period based on changes in mortuary practices (i.e., cremations), the presence of desert tanged projectile points, and increased numbers of stone as opposed to shell beads. This question has been discussed by several archaeologists (Koerper 1979; Kowta 1961; Kroeber 1925; Moratto 1984; True 1966; Van Horn 1987, 1990) with most suggesting an arrival date of approximately 1500 cal BP, though some argue for a much earlier migration at around 3500 cal BP, which coincides with the Millingstone/Intermediate period transition (Sutton 2009). Of course, it is possible, and even likely, that multiple migrations of various scale occurred over the course of hundreds, or thousands, of years.

Late Holocene (3000 BP to Spanish Colonization)

HORIZON IV: LATE PREHISTORIC

In the Late Prehistoric horizon, there was an increase in the use of plant food resources in addition to an increase in terrestrial and marine mammal hunting. There was a concomitant increase in the diversity and complexity of material culture during the Late Prehistoric horizon, demonstrated by more classes of artifacts. The recovery of a greater number of small, finely chipped projectile points suggests increased use of the bow and arrow rather than the atlatl (spear thrower) and dart for hunting. Steatite cooking vessels and containers are also present in sites from this time, and there is an increased presence of composite bone gorges and circular shell fishhooks; perforated stones; arrow shaft straighteners made

of steatite; a variety of bone tools; and personal ornaments such as beads made from shell, bone, and stone. Olivella shell bead styles include a variety of wall and callus beads in addition to the previous spire-lopped, and cup beads. There was also an increased use of asphaltum (also known as bitumen) for waterproofing basketry and caulking canoes and as an adhesive. (Late Prehistoric burial practices are discussed in the Ethnographic Overview section below.)

Technological markers of this horizon as described by Wallace (1955) include the increased use of the bow and arrow, stemless points with concave or convex bases, steatite containers, widespread and use of asphaltum as adhesive, increased abundance and types of bone tools as well as shell, bone, and stone ornaments. Wallace also describes notable distinctions between northern and southern groups during this period including less pottery north of Orange County, where steatite vessels were more prevalent, and the presence of portable mortars and pestles and basket-hopper slabs in the north with bedrock mortars and milling stones being more prevalent in the San Diego area.

By A.D. 1000, fired-clay smoking pipes and ceramic vessels were being used at some sites (Drover 1971, 1975; Meighan 1954; Warren and True 1961). The scarcity of pottery in coastal and near-coastal sites implies that ceramic technology was not well developed in that area, or that occupants were trading with neighboring groups to the south and east for ceramics. The lack of widespread pottery manufacture is usually attributed to the high quality of tightly woven and watertight basketry that was caulked with bitumen (asphaltum) and functioned in the same capacity as ceramic vessels.

During this period, there was an increase in population size accompanied by the advent of larger, more permanent villages (Wallace 1955:223) particularly at the mouths of large mainland coastal canyons and drainages with year-round water supplies (McLendon and Johnson 1999). Large populations and, in places, high population densities are characteristic, with some coastal and near-coastal settlements containing as many as 1,500 people. Many of the larger settlements were permanent villages with year-round residents. The populations of these villages may have also increased seasonally.

In Warren's (1968) cultural ecological scheme, the period between A.D. 500 and European contact, which occurred as early as 1542, is divided into three regional patterns: Chumash/Canaliño (Santa Barbara and Ventura Counties), Takic/Numic (Los Angeles, Orange, and western Riverside Counties), and Yuman (San Diego County). The seemingly abrupt introduction of cremation, pottery, and small triangular arrow points in parts of modern-day Los Angeles, Orange, and western Riverside Counties at the beginning of the Late Prehistoric period is thought to be the result of a Takic migration to the coast from inland desert regions. Modern Gabrielino, Juaneño, and Luiseño people in this region are considered the descendants of the Uto-Aztecan, Takic-speaking populations that settled along the California coast in this period.

Gabrielino Ethnography

The Development Area was historically occupied by the Gabrielino, whose lands encompassed portions of current day Los Angeles, Orange, San Bernadino, and Riverside Counties (Bean and Smith 1978:538; Kroeber 1976:Plate 57). Surrounding Native groups included the Chumash and Tatataviam/Alliklik to the north, the Serrano to the east, and the Luiseño/Juaneño to the south (Figure 8). The interaction between the Gabrielino and many of their neighbors in the form of intermarriage and trade was regularly documented in ethnographic accounts. The name "Gabrielino" (also spelled Gabrieleno and Gabrieleño) denotes those people who were associated with Mission San Gabriel, whereas those who were associated with the nearby Mission San Fernando were referred to as Fernandeño. In the Mission and Rancho periods, Mission San Gabriel included Natives of the greater Los Angeles area, as well as members of surrounding groups such as Kitanemuk, Serrano, and Cahuilla.

Figure 8. Native American tribal territories.

There is little evidence that the people we call Gabrielino had a broad term for their group (Dakin 1978:222). Instead, it appears that people identified themselves as inhabitants of a specific community with locational suffixes. For example, a resident of Yaanga was called a Yabit, which Johnston likened to the way that a resident of New York is called a New Yorker (Johnston 1962:10). Native words suggested as labels for the broader group of Native Americans in the Los Angeles region include Tongva (or Tong-v) (Merriam 1955:7–86) and Kizh (Kij or Kichereno) (Heizer 1968:105), and many present-day descendants have taken on their preferred group name. The term Gabrielino is used in the remainder of this report to designate Native people of the Los Angeles Basin and their descendants.

The Gabrielino subsistence economy was centered on gathering and hunting. The surrounding environment was rich and varied, and the people used resources in mountains, foothills, valleys, deserts, riparian, estuarine, and open and rocky coastal eco-niches. As was the case for Native people throughout California, acorns were the staple food and had been an established part of the diet by the time of the Early Intermediate period. Inhabitants supplemented acorns with the roots, leaves, seeds, and fruits of a variety of flora (e.g., islay, cactus, yucca, sages, and agave). Freshwater and saltwater fish, shellfish, birds, reptiles, and insects, as well as large and small mammals, were also consumed (Bean and Smith 1978:546; Kroeber 1925:631–632; McCawley 1996:119–123, 128–131).

The Gabrielino used a variety of tools and implements to gather and collect food resources, including the bow and arrow, traps, nets, blinds, throwing sticks and slings, spears, harpoons, and hooks. Groups residing near the ocean used oceangoing plank canoes and tule balsa canoes for fishing, travel, and trade between the mainland and the Channel Islands (McCawley 1996:7). Gabrielino people processed food with a variety of tools, including hammer stones and anvils, mortars and pestles, manos and metates, strainers, leaching baskets and bowls, knives, bone saws, and wooden drying racks. Food was consumed from a variety of vessels including soapstone bowls and Catalina Island steatite was used to carve ollas and cooking vessels (Blackburn 1963; Kroeber 1925:629; McCawley 1996:129–138).

At the time of Spanish colonization, the basis of Gabrielino religious life was the Chinigchinich, centered on the last of a series of heroic mythological figures. Chinigchinich gave instruction on laws and institutions and taught the people how to dance as a form of religious practice. He later withdrew into heaven, where he rewarded the faithful and punished those who disobeyed his laws (Kroeber 1925:637–638). The origins of the Chinigchinich are somewhat unclear as it seems to have been relatively new when the Spanish arrived. It was spreading south into the southern Takic groups even as Christian missions were being built and may represent a mixture of native and Christian belief and practices (McCawley 1996:143–144).

Deceased Gabrielino were either buried or cremated, with inhumation more common on the Channel Islands and the neighboring mainland coast, and cremation predominating on the remainder of the coast and in the interior (Harrington 1942; McCawley 1996:157). Remains were buried in distinct burial areas, either directly associated with villages or without apparent village association (Altschul et al. 2007). Cremation ashes have been found in archaeological contexts buried within stone bowls and in shell dishes (Ashby and Winterbourne 1966:27), as well as scattered among broken ground stone implements (Cleland et al. 2007). Archaeological data such as these correspond with ethnographic descriptions of an elaborate mourning ceremony that included a variety of offerings, including seeds, stone grinding tools, otter skins, baskets, wooden tools, shell beads, bone and shell ornaments, and projectile points and knives. Offerings varied with the sex and status of the deceased (Dakin 1978:234–365; Johnston 1962:52–54; McCawley 1996:155–165).

For more than 2,500 years, the Gabrielino and their predecessors practiced the kotuumot kehaay, or mourning ceremony, an important community ritual by which the living assisted the soul of the deceased on its journey to the land of the dead (Hull 2011, 2012; Hull et al. 2013). It was not only an act of loving

remembrance; the Gabrielino believed that the spirits of the deceased were dangerous and must be treated properly lest they molest the living (Boscana 1978). Observed every 1 to 4 years to commemorate those who had died since the previous iteration, the 8-day mourning ceremony was either conducted in late summer or in the same month as the person to be honored had died. The ceremony included four primary rites: ritual clothes washing, clothes burning, image burning, and a distribution of the property of the dead. It took place within a 5-yard-diameter circular brush enclosure called a yovaar, which was decorated with poles at cardinal directions topped with figures, or around a 40- to 50-foot-high central kotuumut pole that was painted in various colors representing body parts and erected in a pit in the ground surrounded by offerings of food, clothing, baskets, beads, and money. It included a hosted feast, paid dancers, and the ritual destruction and burial of valuable goods (McCawley 1996:161–165; Merriam 1955).

Hugo Reid, a Scottish immigrant married to a Gabrielino woman and owner of San Gabriel Mission in the 1840s, described the post-burial treatment of grave goods by the Gabrielino in his 1852 letters:

> When a person died, all the kin collected to lament and mourn his or her loss. After lamenting a while a mourning dirge was sung. If the deceased were the head of the family, or a favorite son, the hut in which he died was burned up, as likewise all of his personal effects, reserving only some article or another, or a lock of hair. This reservation was not as a memento of the deceased, but to make a feast with on some future occasion, generally after the first harvest of seeds and berries. (Dakin 1978:235)

Discussing the culmination of the ceremony itself, Reid continued:

> On the eighth day the…old women were employed to make more food than usual, and when the sun was in its zenith, it was distributed, not only among the actors, but to the spectators likewise. After eating, a deep hole was dug, and a fire kindled in it, when the articles reserved at the death of relatives were committed to the flames; at the same time, baskets, money, and seeds were thrown to the spectators, as in the marriage ceremony. During the burning process, one of the seers, reciting mystical words, kept stirring up the fire to ensure the total destruction of the things. The hole was then filled up with earth and well trodden down. The feast was over. (Dakin 1978:242–243)

This mourning ceremony has deep roots in southern California, predating the Spanish period (1769–1834) by at least 2,000 years (Hull et al. 2013). It was also reportedly practiced in mid-nineteenth century Gabrielino communities in San Fernando, Piru, and Saticoy (Blackburn 1976:232), in neighboring Luiseño- and Cahuilla-speaking regions, including the greater Los Angeles area (Dietler et al. 2018; Morris et al. 2016).

Continuity After Colonization

The traditional lifeways of Native California peoples were dramatically altered by the Spanish mission system and later Mexican and American settlement of the area. The incursion of these new groups also introduced diseases that devastated many indigenous populations. The dissolution of their culture alienated them from their traditional subsistence patterns, social customs, and marriage networks. European diseases, against which they had no immunity, reached epidemic proportions, and Gabrielino populations were rapidly decimated (Johnson 1987). The increase in agriculture and the spread of grazing livestock into their collecting and hunting areas made maintaining traditional lifeways increasingly difficult. Although many Gabrielino were eventually subsumed by the mission system, some refused to give up their traditional existence and escaped into the interior regions of the state, where they survived as refugees living with other tribes.

The increase in agriculture and the spread of grazing livestock into their collecting and hunting areas made maintaining traditional lifeways increasingly difficult. Although many Gabrielino were eventually subsumed by the mission system, some refused to give up their traditional existence and escaped into the interior regions of the state, where they survived as refugees living with other tribes.

Many researchers have brought attention to the role of Native American labor in developing and sustaining the Spanish and Mexican settlements providing crucial services and highly skilled roles across multiple types of industry (Akins and Bauer Jr. 2021; Anderson 2005:81–82; Hackel 1998, 2005:272–320; Phillips 2010; Silliman 2001).

> The involvement of Native American groups in any of the standard colonial institutions in the Americas—missions, ranchos, trade outposts, presidios, forts, and secular towns—revolved around labor, even in contexts of frequent interethnic marriage. Sometimes colonial groups forced labor on native societies; other times, indigenous peoples found colonial labor opportunistic and capitalized on it. In either case, labor constituted one of the primary and most influential interpersonal and intercultural relations in pluralistic colonial communities. (Silliman 2001:379–384)

Gabrielino acquired equestrian skills used in herding, corralling, and branding cattle, and they routinely conducted the work of killing and skinning livestock. They demonstrated an aptitude for the engineering needed to create irrigation systems—finding grades, laying out ditches, and managing watering regimes. Irrigation was crucial for supplying domestic supplies and agriculture, especially wine making, which also relied on Gabrielino to plant the grapevines. Native American women and children provided crucial household chores within the ranchos across the Los Angeles Basin: "Most of those (Native Americans) who left the missions remained close by, often in their traditional tribal homeland, and worked on ranchos" (Akins and Bauer Jr. 2021:112).

During the American period, Native Americans found work in citrus groves and other large-scale agricultural operations. During the twentieth century, Native Americans affiliated with tribes from outside the region increasingly came to Los Angeles, some out of necessity or in pursuit of new opportunities, and others because of the federal government's termination and relocation policies (Akins and Bauer Jr. 2021:266). Native American workers made important contributions to several of the industries important during the early and middle parts of the twentieth century, such as aviation and film.

Whereas the contribution of Native American labor is clearly critical to an account of local history, Phillips offers an important consideration in terms of the motivation for considering this perspective.

> By examining how Indians adjusted to the new work regime and by describing how many became efficient workers, the focus remains on Indians themselves. Recognizing adaptation and efficiency, however, is far different from approving the system in which they were achieved…The missions radically altered Indian culture, but they did not destroy Indian people. Even secularization—the systematic breakup of the mission system in the 1830s—was not designed to destroy Indians. In fact, Indians played an important role in this crucial event in California history, a role downplayed by some historians. (Phillips 2010:17–19).

It is estimated that several thousand Gabrielino descendants currently live in the Los Angeles area, though no reservations or rancherias were ever set aside, and no tribal organizations are federally recognized. Gabrielino descendants are represented by the following tribal organizations who actively strive to maintain their cultural legacy: Gabrielino-Tongva Indians of California Tribal Council, the Gabrielino-Tongva Indian Tribe, the Gabrielino/Tongva Nation, the Gabrielino/Tongva San Gabriel Band of Mission Indians, and the Gabrieleño Band of Mission Indians – Kizh Nation.

Locating Former Native American Settlements, Placenames, and Sites

In general, it has proven difficult to establish the precise location of Native American settlements occupied immediately preceding and following Spanish arrival in California approximately 250 years ago (McCawley 1996:31–32). Many of the settlements and so-called villages had long since been abandoned by the time ethnographers, anthropologists, and historians attempted to document any of their locations, at which point Native American lifeways had been irrevocably changed. McCawley quotes Kroeber (1925:616) in his remarks on the subject, writing that "the opportunity to prepare a true map of village locations 'passed away 50 years ago'" (McCawley 1996:32). Thus, even with ethnographic, historical, and archaeological evidence, it can be difficult to conclusively establish whether any given assemblage represents the remains of the former village site.

Several factors have confounded efforts to reidentify former Native American settlements. First, many settlements were recorded with alternative names and spellings. In some cases, Spanish-era rancho grants may have bounded Native American villages, and in others the Spanish ranchos adopted Native American placenames, such as Kaweenga, Tujunga, Topanga, and Cucamonga. Second, there have been conflicting reports on the meaning and locational reference of the placenames. In addition to differences in the interpretation of a given word, some of the placenames refer to a site using relatively vague terms that could fit several possible locations, or the word may reference a natural feature that no longer exists such as a type of plant that once grew in an area now fully urbanized. Third and perhaps most importantly, Native American placenames recorded in historic records and reported in oral histories did not necessarily represent a continually occupied settlement within a discrete location, which is how the term "village" is commonly understood today. Instead, in at least some cases, the settlements were represented by several smaller camps scattered throughout an approximate geography, shaped by natural features that were subject to change over generations (Ciolek-Torello and Garraty 2016; Johnston 1962:122). Furthermore, the criteria for what constitutes a village site have been especially lacking in consistency and specificity, even within a strictly academic context (see summary by Ciolek-Torello and Garraty [2016:69]). Much of the debate in this regard concerns whether sites were occupied on a permanent or temporary basis, and archaeological data do not always provide unequivocal evidence to make a reliable classification for a given site.

Still, within the range of terms put forth to characterize different types of Native American settlements, there are conventions and core insights shared among scholars. Prehistoric sites in coastal California, for example, are commonly referenced in archaeological sources as residential sites, habitation sites, and seasonal camps, whereas the term *village* is more often used to reference Mission period settlements such as the Chumash sites of Humaliwo, Helo', and Muwu, or Luiseño sites such as Topomai (Ciolek-Torello and Garraty 2016:69). These Spanish and Mexican period sites are also sometimes referred to as rancherias—a term with connotations for a more permanent settlement and often used synonymously with village. The convention was established in 1852 by Hugo Reid who published the first list of Native American placenames in the Los Angeles area, which was by no means comprehensive (Stoll et al. 2016:387–389). The more generic terms of *settlement* and *site* will be used in this report and refer to places where Native American communities were once gathered. Native American sites may also refer to locations where archaeological materials, including human remains, have been identified. Such locations may consist of one or more known archaeological resources or a general area in which an archaeological resource could exist.

NATIVE AMERICAN COMMUNITIES IN LOS ANGELES

The precise location of most Native American villages in the Los Angeles Basin is subject to much speculation, maps depicting villages throughout the greater Los Angeles area show these sites located along rivers or streams. In some cases, Spanish-era rancho grants may have bounded Native American

villages, and in others the Spanish ranchos adopted Native American placenames, such as *Kaweenga, Tujunga, Topanga,* and *Cucamonga.* Alternative names and spellings for communities, and conflicting reports on their meaning or locational reference further complicate efforts at determining the location of actual village sites. Native American placenames referred to at the time of Spanish contact did not necessarily represent a continually occupied settlement within a discrete location, rather in at least some cases, the communities were represented by several smaller camps scattered throughout an approximate geography, shaped by natural features that were subject to change over generations (see Johnston 1962:122). Many of the villages had long since been abandoned by the time ethnographers, anthropologists, and historians attempted to document any of their locations, at which point the former village sites were affected by urban and agricultural development, and Native American lifeways had been irrevocably changed. McCawley quotes Kroeber for his remarks on the difficulty of reliably locating former village sites, writing that "the opportunity to prepare a true map of village locations 'passed away 50 years ago'" (Kroeber 1925:616 as cited in McCawley 1996:32). Thus, even with ethnographic, historical, and archaeological evidence, it can be difficult to conclusively establish whether any given assemblage represents the remains of the former village site.

The following sections provide summaries of the named settlements closest to the Development Area, including Yaanga and Geveronga, which are both reported to have been in the downtown area of Los Angeles (McCawley 1996:57).

Yaanga and Settlements in Downtown Los Angeles

Although the precise location of any given village is subject to much speculation, it is clear the banks of the Los Angeles River were home to many Gabrielino villages throughout the greater Los Angeles area (Figure 9). The closest ethnographically documented village to the Development Area is Yaanga (alternative spellings and names include Yang-na, Yangna, and Yabit) (see Figure 9). Although the actual location is disputed, generally Yaanga is believed to have been located near present-day Union Station, approximately 2.25 km (1.4 miles) north of the Development Area (McCawley 1996:57; Morris et al. 2016). Yaanga is among the major Native American communities encountered by the Portola party when they passed through the Los Angeles Basin in 1769 and was perhaps the largest Gabrielino settlement within the Los Angeles Basin. The location of Yaanga has long been considered synonymous with that of Los Angeles, first as the Spanish pueblo, then the town and city.

Historians and archaeologists have presented multiple possible village locations in the general area surrounding Union Station; however, like the Los Angeles Pueblo itself, it is likely that the village was relocated from time to time due to major shifts of the Los Angeles River during years of intense flooding. Dillon (1994) presented an exhaustive review of the potential locations, most within several blocks of the Los Angeles Plaza, in the location of present-day Olvera Street near Union Station. Johnston (1962:122) concluded that "in all probability *Yangna* lay scattered in a fairly wide zone along the whole arc [from the base of Fort Moore Hill to Union Station], and its bailiwick included as well seed-gathering grounds and oak groves where seasonal camps were set up." A second settlement, Geveronga, was recorded in mission registers and has also been described in ethnographic accounts as immediately adjoining the Pueblo of Los Angeles (McCawley 1996:57). The approximated location for Geveronga is 4.46 km (2.8 miles) northwest of the Development Area (see Figure 9). By contrast to Yaanga, very little is known about Geveronga, except that it was mentioned in ethnographic accounts as having been a settlement immediately adjoining the Pueblo of Los Angeles, and that Mission San Gabriel records identify 31 people as having come from here between 1788 and 1809 (McCawley 1996:57).

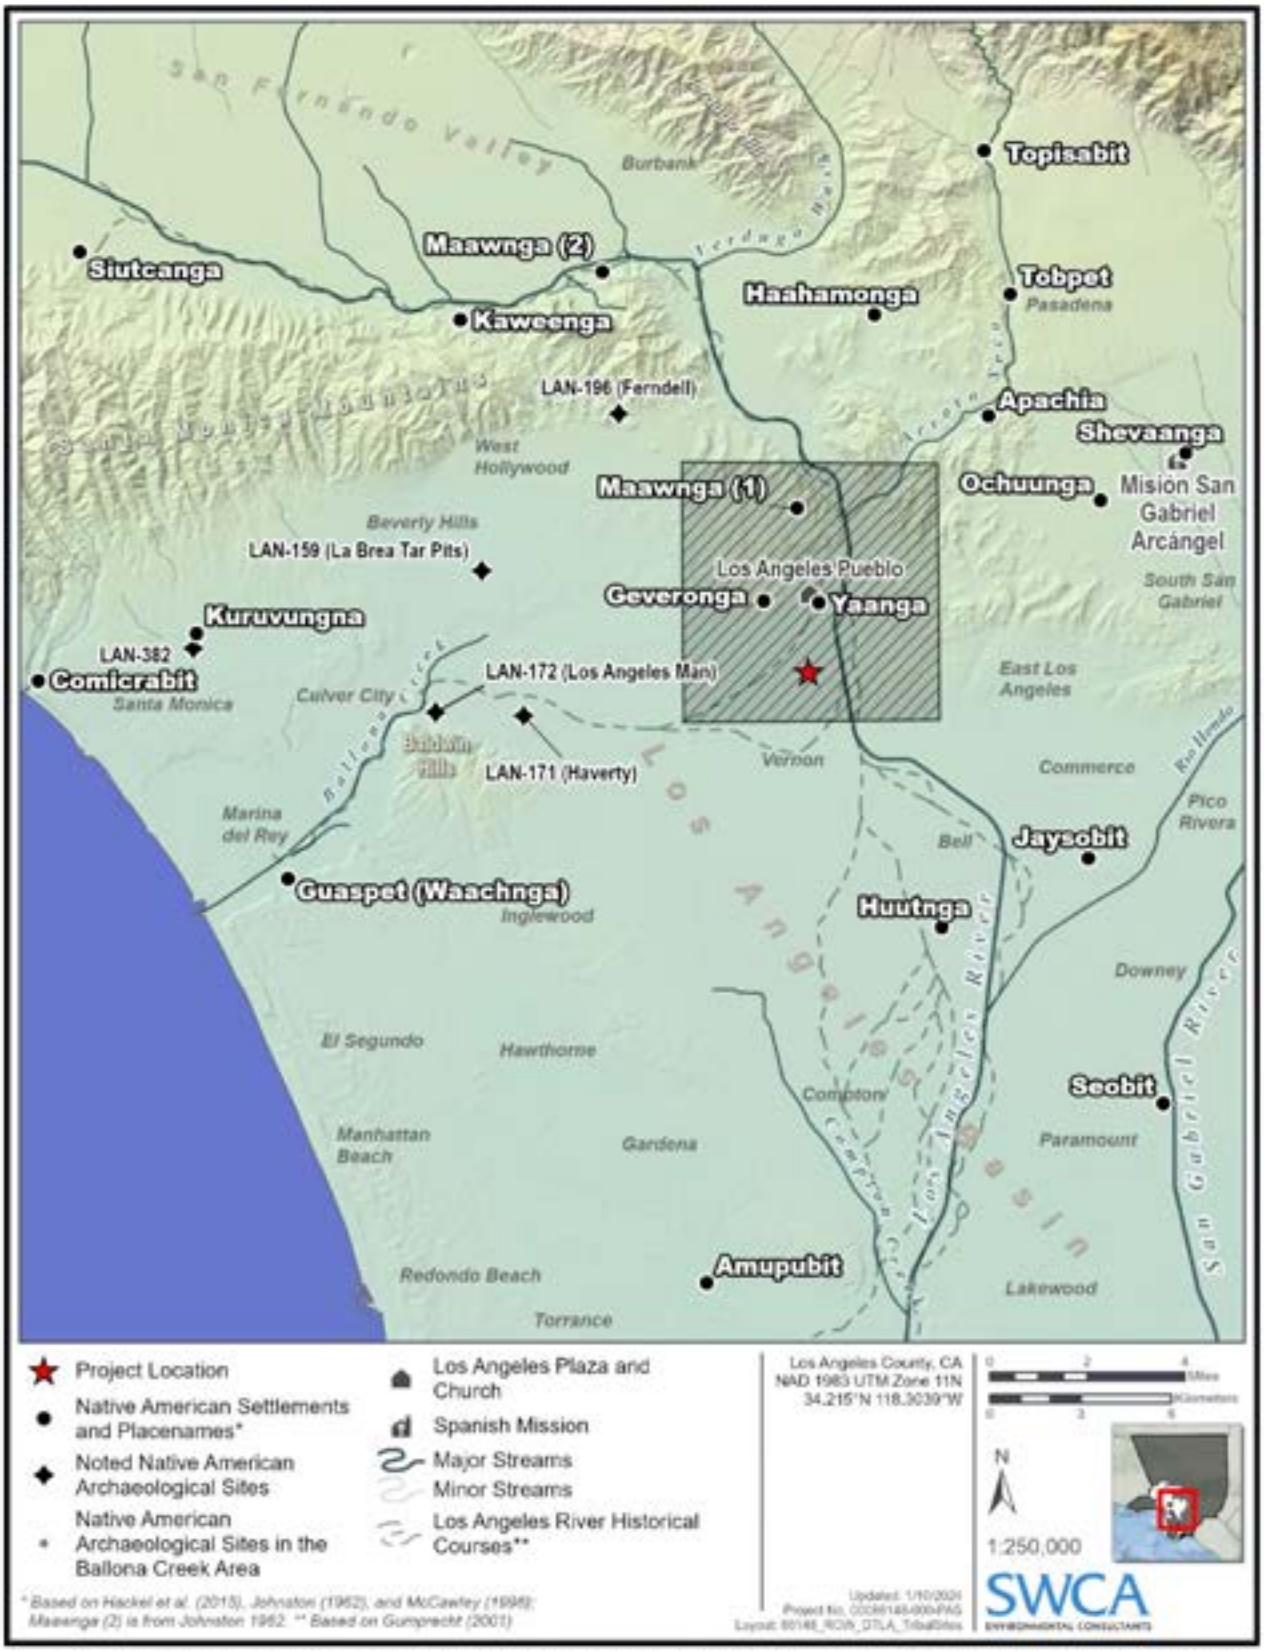

Figure 9. Native American communities and sites in the greater Los Angeles area; locations from Hackel et al. (2015) and Gumprecht (2001).

Yaanga Post 1781

After the settlement of Los Angeles in 1781, Yaanga faced many new challenges because of its proximity to the new city. The last recorded birth at Yaanga is believed to have been in 1813, after which the village was forced to relocate south of the original site (Morris et al. 2016:97). This new village, known as Ranchería de los Poblanos by the Angelenos, is believed to have been located at the intersection of Los Angeles Street and 1st Street, approximately 1.9 km (1.18 miles) north of the Development Area (Morris et al. 2016:96–97). This rancheria existed for approximately 10 years, between 1826 and 1836, after which the indigenous population was forced to relocate to a plot of land near Commercial and Alameda Streets where it persisted for another approximately 10 years from 1836 and 1845 (Morris et al. 2016). Then nearby landowners started registering complaints and the Native American community was once again forced to relocate even further east, across the Los Angeles River to a site called Pueblito, which itself was razed in 1847. This coincided with legislation passed to require the remaining Native American population to live in dispersed settlements or with their employers throughout the city.

There was another rancheria within the boundaries of Los Angeles during this time: Rancheria de los Pipimares. The rancheria may have been in existence from as early as 1820 but ceased to exist after 1846 (Morris et al. 2016). Archival research identified the likely location of Rancheria de los Pipimares to be within the area of San Pedro and 7th Streets, approximately 1 km (0.62 mile) northwest of the Development Area (Morris et al. 2016).

Evidence for Yaanga

Aside from the ethnographic evidence suggesting the location of these villages, little direct, indisputable archaeological evidence for the location of either village has been produced to date. Archaeological materials reportedly were unearthed during the construction of Union Station in 1939 (2.25 km [1.4 miles] north of the Development Area), and "considerably more" in 1970 during the rebuilding of the Bella Union Hotel on the 300 block of North Main Street (2.17 km [1.35 miles] north of the Development Area) (Johnston 1962:121; Robinson 1979:12). The preponderance of available evidence indicates that there were one or more early Historic period Native American communities west of the Los Angeles River near the original plaza site. This assumption is supported through several lines of ethnographic evidence, including the expedition journal of Fr. Juan Crespi and engineer Miguel Costansó, both of whom were associated with the 1769 Portolá expedition. The notes from these sources indicate the village was located between 2.0 and 2.4 km (1.3 and 1.5 miles) west-southwest from the Los Angeles River on high and level ground. The Pueblo of Los Angeles was documented to have been founded directly adjacent to this village. The location of Yaanga was also referenced by long-time Los Angeles resident Narciso Botello and Gabrielino consultant José María Zalvidea, who indicated that Yaanga was originally located adjacent to the original site of the Los Angeles Plaza (Morris et al. 2016:112).

During construction of the Metropolitan Water District headquarters building in the mid-1990s, approximately 2.15 km (1.34 miles) south of the Development Area, an archaeological site (LAN-1575/H) was identified and included a substantial Native American component composed of artifacts and primary interments and cremation reburials. The archaeological investigation by Applied Earthworks found evidence of occupation that both predated and overlapped the Mission and Rancho period, but ultimately the researchers could not reach a definitive conclusion as to whether portions of the site represented the material remains of Yaanga (Goldberg et al. 1999:151–159). In 2019, during construction of Metro's Patsaouras Bus Plaza Station, which was partly within the boundary of LAN-1575/H, new site components were identified that included Native American human remains and artifacts, as well as Historic period deposits (i.e., not affiliated with Native Americans). The new site components are consistent with the types and ages identified in LAN-1575/H. Some of these new discoveries were

identified within the boundary designated for LAN-1575/H, but the majority extend east along U.S. Route 101 and Interstate 10.

While most of the natural landscape features that would have characterized Yaanga and its surroundings are no longer present and the precise location of the settlement remains an open question, the general location still retains its association with Yaanga and is considered an important place by contemporary Gabrielino groups. The proximity of Yaanga to a massive sycamore tree known as El Aliso is also commonly cited and often referred to synonymously with that of Yaanga. The tree is visible in early photographs and plotted on plat maps showing the vineyard and winery established by Louis Vignes. A memorial plaque was recently placed to commemorate Yaanga and its location—on the north side of Commercial Street near the intersection with Vignes Street, approximately 1.97 km (1.22 miles) north of the Development Area. The location was chosen based on proximity to the place where El Aliso had once grown, which was in what is now in the channel excavated for the Hollywood Freeway.

Mission and Rancho Period (1769–1848)

Although Spanish, Russian, and British explorers visited the area for brief periods between 1529 and 1769, the Mission period in California begins with the establishment in 1769 of a settlement at San Diego by the Spanish and the founding of Mission San Diego de Alcalá. Independence from Spain in 1821 marks the beginning of the Mexican era of governance within California, and the signing of the Treaty of Guadalupe Hidalgo in 1848, ending the Mexican-American War, signals the beginning of the American period, when California became a territory of the United States.

Spanish explorers made sailing expeditions along the coast of southern California between the mid-1500s and mid-1700s. In search of the legendary Northwest Passage, Juan Rodríquez Cabrillo stopped in 1542 at present-day San Diego Bay. With his crew, Cabrillo explored the shorelines of present Catalina Island as well as San Pedro and Santa Monica bays. Much of the present California and Oregon coastline was mapped and recorded in the next half-century by Spanish naval officer Sebastián Vizcaíno. Vizcaíno's crew also landed on Santa Catalina Island and at San Pedro and Santa Monica bays, giving each location its long-standing name. The Spanish crown laid claim to California based on the surveys conducted by Cabrillo and Vizcaíno (Bancroft 1886:96–99; Gumprecht 2001:35).

More than 200 years passed before Spain began the colonization and inland exploration of Alta California. The 1769 overland expedition by Captain Gaspar de Portolá marks the beginning of California's Mission period, occurring just after the King of Spain installed the Franciscan Order to direct religious and colonization matters in assigned territories of the Americas. With a band of 64 soldiers, missionaries, Baja (lower) California Native Americans, and Mexican civilians, Portolá established the Presidio of San Diego, a fortified military outpost, as the first Spanish settlement in Alta California. In July 1769, while Portolá was exploring southern California, Franciscan Fr. Junípero Serra founded Mission San Diego de Alcalá at Presidio Hill, the first of the 21 missions that would be established in Alta California by the Spanish and the Franciscan Order between 1769 and 1823.

The Portolá expedition first reached the present-day boundaries of Los Angeles in August 1769, thereby becoming the first Europeans to visit the area. Father Juan Crespí, a member of the expedition, named the campsite by the river Nuestra Señora la Reina de los Angeles de la Porciúncula or "Our Lady the Queen of the Angels of the Porciúncula." Two years later, Fr. Junípero Serra returned to the valley to establish a Catholic mission, the Mission San Gabriel Arcángel, on September 8, 1771 (Engelhardt 1927). In 1781, a group of 11 Mexican families traveled from Mission San Gabriel Arcángel to establish a new pueblo called El Pueblo de la Reyna de Los Angeles ("the Pueblo of the Queen of the Angels"). This settlement consisted of a small group of adobe-brick houses and streets and would eventually be known as the Ciudad de Los Angeles ("City of Angels").

A major emphasis during the Mission period in California was the construction of missions and associated presidios to integrate the Native American population into Christianity and communal enterprise. Incentives were also provided to bring settlers to pueblos or towns, but just three pueblos were established during the Mission period, only two of which were successful and remain as California cities (San José and Los Angeles). Several factors kept growth within Alta California to a minimum, including the threat of foreign invasion, political dissatisfaction, and unrest among the indigenous population. After more than a decade of intermittent rebellion and warfare, New Spain (Mexico and the California territory) won independence from Spain in 1821. In 1822, the Mexican legislative body in California ended isolationist policies designed to protect the Spanish monopoly on trade, and decreed California ports open to foreign merchants. The authority of the California missions gradually declined, culminating in their secularization by the central Mexican government in 1833 and by the Alta California legislature in 1834.

Extensive land grants were established in the interior during the Mission period, in part to increase the population inland from the more settled coastal areas where the Spanish had first concentrated their colonization efforts. The secularization of the missions following Mexico's independence from Spain resulted in the subdivision of former mission lands and establishment of many additional ranchos. The Development Area is within the original boundaries of the Pueblo of Los Angeles which was founded during the era of Mexican governance in 1781.

During the Rancho period (1834–1848), landowners largely focused on the cattle industry and devoted large tracts to grazing. Cattle hides became a primary southern California export, providing a commodity to trade for goods from the east and other areas in the United States and Mexico. The number of non-Native inhabitants increased during this period because of the influx of explorers, trappers, and ranchers associated with the land grants. The rising California population contributed to the introduction and rise of diseases foreign to the Native American population, who had no associated immunities.

American Period (1848–Present)

War in 1846 between Mexico and the United States began at the Battle of Chino, a clash between resident Californios and Americans in the San Bernardino area. This battle was a defeat for the Americans and bolstered the Californios' resolve against American rule, emboldening them to continue the offensive in later battles at Dominguez Field and in San Gabriel (Beattie 1942). However, this early skirmish was not a sign of things to come, and the Americans were ultimately the victors of this 2-year war. The Mexican-American War officially ended with the Treaty of Guadalupe Hidalgo in 1848, which resulted in the annexation of California and much of the present-day southwest, ushering California into its American period.

California officially became a state with the Compromise of 1850, which also designated Utah and New Mexico (with present-day Arizona) as U.S. territories. Horticulture and livestock, based primarily on cattle as the currency and staple of the rancho system, continued to dominate the southern California economy through 1850s. The Gold Rush began in 1848; with the influx of people seeking gold, cattle were no longer desired mainly for their hides, but as a source of meat and other goods. During the 1850s cattle boom, rancho vaqueros drove large herds from southern to northern California to feed that region's burgeoning mining and commercial boom. Cattle were at first driven along major trails or roads such as the Gila Trail or Southern Overland Trail, but then were transported by trains when available. The cattle boom ended for southern California as neighboring states and territories drove herds to northern California at reduced prices. Operation of the huge ranchos became increasingly difficult, and droughts severely reduced their productivity (Cleland 1941).

Los Angeles: From Pueblo to City

On September 4, 1781, 44 settlers from Sonora, Mexico, accompanied by the governor, soldiers, mission priests, and several Native Americans, arrived at a site along the Rio de Porciúncula (later renamed the Los Angeles River), which was officially declared El Pueblo de Nuestra Señora de los Angeles de Porciúncula, or the Town of Our Lady of the Angels of Porciúncula (Robinson 1979:238; Ríos-Bustamante 1992; Weber 1980). The site chosen for the new pueblo was elevated on a broad terrace 0.8 km (0.5 mile) west of the river (Gumprecht 2001). By 1786, the area's abundant resources allowed the pueblo to attain self-sufficiency, and funding by the Spanish government ceased.

Efforts to develop ecclesiastical property in the pueblo began as early as 1784 with the construction of a small chapel northwest of the plaza. Though little is known about this building, it was located at the pueblo's original central square near the corner of present-day Cesar Chavez Avenue and North Broadway (Newcomb 1980:67–68; Owen 1960:7). Following continued flooding, however, the pueblo was relocated to its current location on higher ground, and the new town plaza (Los Angeles Plaza) soon emerged. The reconstructed church was known as "La Iglesia de Nuestra Señora la Reina de Los Angeles" (Plaza Church).

Alta California became a state in 1821, and the town slowly grew as the removal of economic restrictions attracted settlers to Los Angeles. The population continued to expand throughout the Mexican period and on April 4, 1850, only 2 years after the Mexican-American War and 5 months prior to California earning statehood, the City was formally incorporated. Settlement of the Los Angeles region continued steadily throughout the Early American period. At that time, the city was bordered on the north by the Los Felis and the San Rafael Land Grants and on the south by the San Antonio Luge Land Grant. Many of the ranchos in the area now known as Los Angeles County remained intact after the United States took possession of California and ranching retained its importance through the mid-nineteenth century. In the 1860s a severe drought resulted in many of the ranchos being sold or otherwise acquired by Americans who subdivided the land into agricultural parcels or towns (Dumke 1944). Los Angeles maintained its role as a regional business center in the early American period and the transition of many former rancho lands to agriculture, as well as the development of citriculture in the late 1800s, further strengthened this status (Caughey and Caughey 1977).

The growth of Los Angeles as a regional commerce center, combined with the expansion of port facilities and railroads throughout the region, contributed to the impact of the real estate boom of the 1880s on Los Angeles which resulted in a doubling of the city's population (Caughey and Caughey 1977; Dumke 1944). By the late 1800s, government leaders recognized the need for water to sustain the growing population in the Los Angeles area. Irish immigrant William Mulholland personified the city's efforts for a stable water supply (Dumke 1944; Nadeau 1997). By 1913, the City of Los Angeles had purchased large tracts of land in the Owens Valley, and Mulholland planned and completed the construction of the 240-mile-long aqueduct that brought the valley's water to the city (Nadeau 1997).

The growth in population also resulted in an increased demand for public transportation. As the city neared the end of the nineteenth century, numerous privately owned passenger rail lines were in place. Though early lines were horse and mule drawn, they were soon replaced by cable cars in the early 1880s, and by electric cars in the late 1880s and early 1890s. Many of these early lines were subsequently consolidated into Henry E. Huntington's Los Angeles Railway Company (LARy) in 1898, which reconstructed and expanded the system into the twentieth century and became the main streetcar system for central Los Angeles, identified by their iconic "yellow cars." During this period, Huntington also developed the much larger Pacific Electric system (also known as the "red cars") to serve the greater Los Angeles area. Just as the horse-and-buggy street cars were replaced by electric cars along the same routes,

gas-powered buses (coaches) eventually served former yellow car routes. Both the red cars and LARy served Los Angeles until they were eventually discontinued in the early 1960s.

Los Angeles continued to grow outward from the city core in the twentieth century, in part due to the discovery of oil and its strategic location as a wartime port. The military presence led to the growth in the aviation and eventually aerospace industries in the city and region. Hollywood became the entertainment capital of the world through the presence of the film and television industries and continues to tenuously maintain that position. With nearly 4 million residents, Los Angeles is the second largest city in the United States (by population), and it remains a city with worldwide influence that continues to struggle with its population's growth and needs.

DOWNTOWN LOS ANGELES

The Development Area is in the northern portion of downtown Los Angeles, and south of the historical core of the Los Angeles Pueblo. The original layout of Los Angeles Pueblo was established based on the Spanish grid system, codified as the Laws of the Indies, which required the corners of the corners of the central plaza to be oriented to the cardinal directions. As the pueblo grew, the Spanish system was increasingly adapted to fit the local topography, which was characterized by three landforms—river to the east, hills to the northwest, and the terrace between the two. These historical and topographic factors are reflected in the orientation of the early eighteenth-century street grid and the size and shape of lots depicted in Ord's (1849) map (Figure 10).

Early development of pueblo was dictated by the landform, which historically featured a bluff and steep slopes extending to the south and east, forming the periphery for the pueblo's core elements consisting of the Los Angeles Plaza, Plaza Church, and other civic and commercial buildings (Dietler and Treffers 2012). On top of the alluvial terrace and extending into the base of the foothills were the residential areas that expanded north and south from the historical core (see Figure 10). The land to the north of the Plaza and Plaza Church was one of the first areas to be settled and was known throughout much of the nineteenth century as "Sonora Town" (Deverell 2004). This adobe neighborhood was settled primarily by Mexicans from Sonora, although there were also many immigrants from Europe and the United States, many of whom became Mexican citizens at the time (Estrada 2008:10).

In the early period of the Los Angeles Pueblo and most of the eighteenth century, agricultural fields were established in the floodplain west of the Los Angeles River and beneath the terrace. Here meandering roads and fences made from hedges and wooden poles delineate the fields that Ord recorded as either plowed fields, corn, or vineyards. Farms varied in size and shape, ranging up to approximately 50 acres, and were irrigated through zanjas and other unnamed ditches, many of which are captured on Ord's 1849 map. The Development Area is situated in one of the former agricultural fields depicted in Ord's map (see Figure 10).

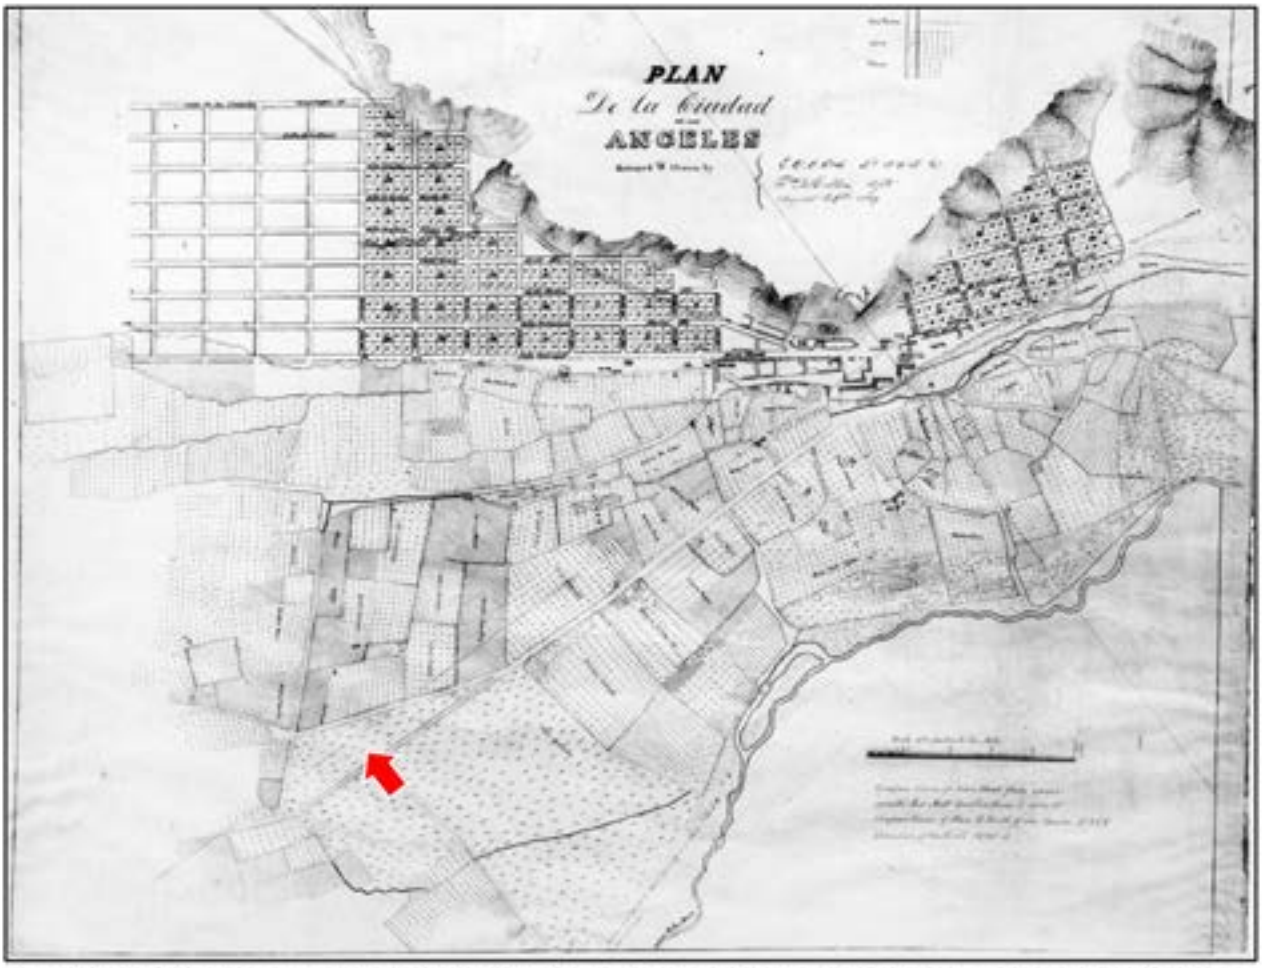

Figure 10. Photographic reprint of E.O.C. Ord's original 1849 map of the City, annotated with street names, lot owners, and block numbers (Ord 1849). The top of the map is oriented to the northwest, reflecting the original orientation of the city's layout based on the Spanish system. The red arrow indicates the approximate location of the Development Area.

The American era, beginning with the Mexican-American War, ushered in a series of massive transformations in the area. During the Mexican-American War the neighborhood surrounding the Los Angeles Plaza was the site of major battles (Estrada 2008:10). The Americans memorialized these battles when they renamed the abutting hill after Fort Moore, a U.S. military fortification constructed in 1847 during the Mexican-American War (Cortelyou 1949:17–21). During this period, the City's population grew substantially, due in part to the settlers from the east coming after the Mexican-American War and to the Gold Rush (Estrada 2008). The newcomers to the city led to significant expansion primarily to the north and southwest. Fort Moore was abandoned following the signing of the Treaty of Guadalupe Hidalgo in 1848 and eventually decommissioned in 1853. That same year, Los Angeles' non-Catholic settlers established an unofficial cemetery. The cemetery was known by several names, including City Cemetery, Fort Hill Cemetery, and "the cemetery on the hill," and functioned in an informal manner over the subsequent decade (Gibson and Dietler 2012). However, by the early 1860s, the public became concerned with its overcrowding, prompting the City to take control of the land and eventually ban future burials in 1879 (Carpenter 1973).

Los Angeles underwent another population boom in the 1880s coinciding with the arrival of the transcontinental railroad. The increase in population resulted in an increased demand for housing and the

development of new residential neighborhoods away from the city center. In response to the subsequent land boom, the City parceled out residential lots around the cemetery as early as 1884, with no initial effort to remove the burials. Fort Moore Hill soon became one of the premier residential neighborhoods due to its views and location above the city center (Cortelyou 1949:17–21; Gibson and Dietler 2012). The 1880s population boom resulted quickly in the subdivision of the farms on the lower terrace into lots that were sold for primarily residential and commercial purposes.

THE ZANJAS OF LOS ANGELES: A BRIEF HISTORY

From Los Angeles' beginnings as a small pueblo, water was understood as a crucial force to control and use if the settlement was to survive. Since the 1770s, a canal known as the Zanja Madre had been diverting water from the Los Angeles River to the newly established pueblo. The pueblo's residents used this water for ranching, agriculture, drinking, bathing, and washing clothes (Newmark and Newmark 1970). Gravity was sufficient to force the water down the zanja onto the pueblo lands, but the flow of water was not smooth and continuous because the flow of water was frequently impeded by debris and the ditch was often damaged during heavy rainfall. At this time, the maintenance of the zanja was the responsibility of all residents of the pueblo. The ayuntamiento, or town hall, came to the decision that one person had to be in charge of ensuring the functionality of the zanja and to regularly inspect it. To this aim, the ayuntamiento appointed a rotating position known as the zanjero, whose job was to properly inspect, maintain, and coordinate repairs of the zanja. Every week a new City official would be in charge of the zanjas, and every head of household was required to contribute some share, be it money or labor, to the maintenance of the zanjas, though many simply supplied Gabrielino labor to fulfill their contribution (Gumprecht 2001:60; Hoffman and Stern 2007:3).

Los Angeles residents were still using the publicly owned zanjas after California's entrance into the union, and by this time, the roles and duties of the zanjero had ballooned to include issuing permits, overseeing deputy zanjeros, and collecting fees. Because the position had become so important, Mayor Stephen Foster established a permanent zanjero position, eliminating the rotating schedule that was used during the Spanish and Mexican periods, and providing stability to the office. The position quickly became one of the most important appointed positions in Los Angeles (Gumprecht 2001:60). At the time property owners were still "required to contribute a certain amount of time" to devote to maintaining the zanja, underlying the importance of the zanja system to the young city (Gumprecht 2001:60). Though the duties and importance of the zanjeros changed over time, the importance of Native American labor in the pueblo's functioning remained constant from the Mission period and into the American period. Not only did Native American laborers make up most farm labor, but also they were often tasked with fixing the zanjas (Hoffman and Stern 2007:3–4).

As the budding city grew, new zanjas needed to be built to irrigate increasingly more farmlands. In 1857 the first offshoot was completed—Zanja No. 1, which ran between Alameda Street and the Los Angeles River. By 1870 there were a total of eight zanjas covering approximately 80 km (50 miles) that connected to the Zanja Madre. At this early time, the zanjas were little more than earthen ditches; none was covered or lined, allowing residents to easily steal water. From these humble beginnings came an extensive water conveyance system that supplied water for personal use and irrigation to the growing city. Using archival research and historic sources, Gumprecht (2001) created a map of the entire zanja system in 1880 showing the original Zanja Madre, the eight initial offshoots, and the additional zanjas that had been added (Figure 11).

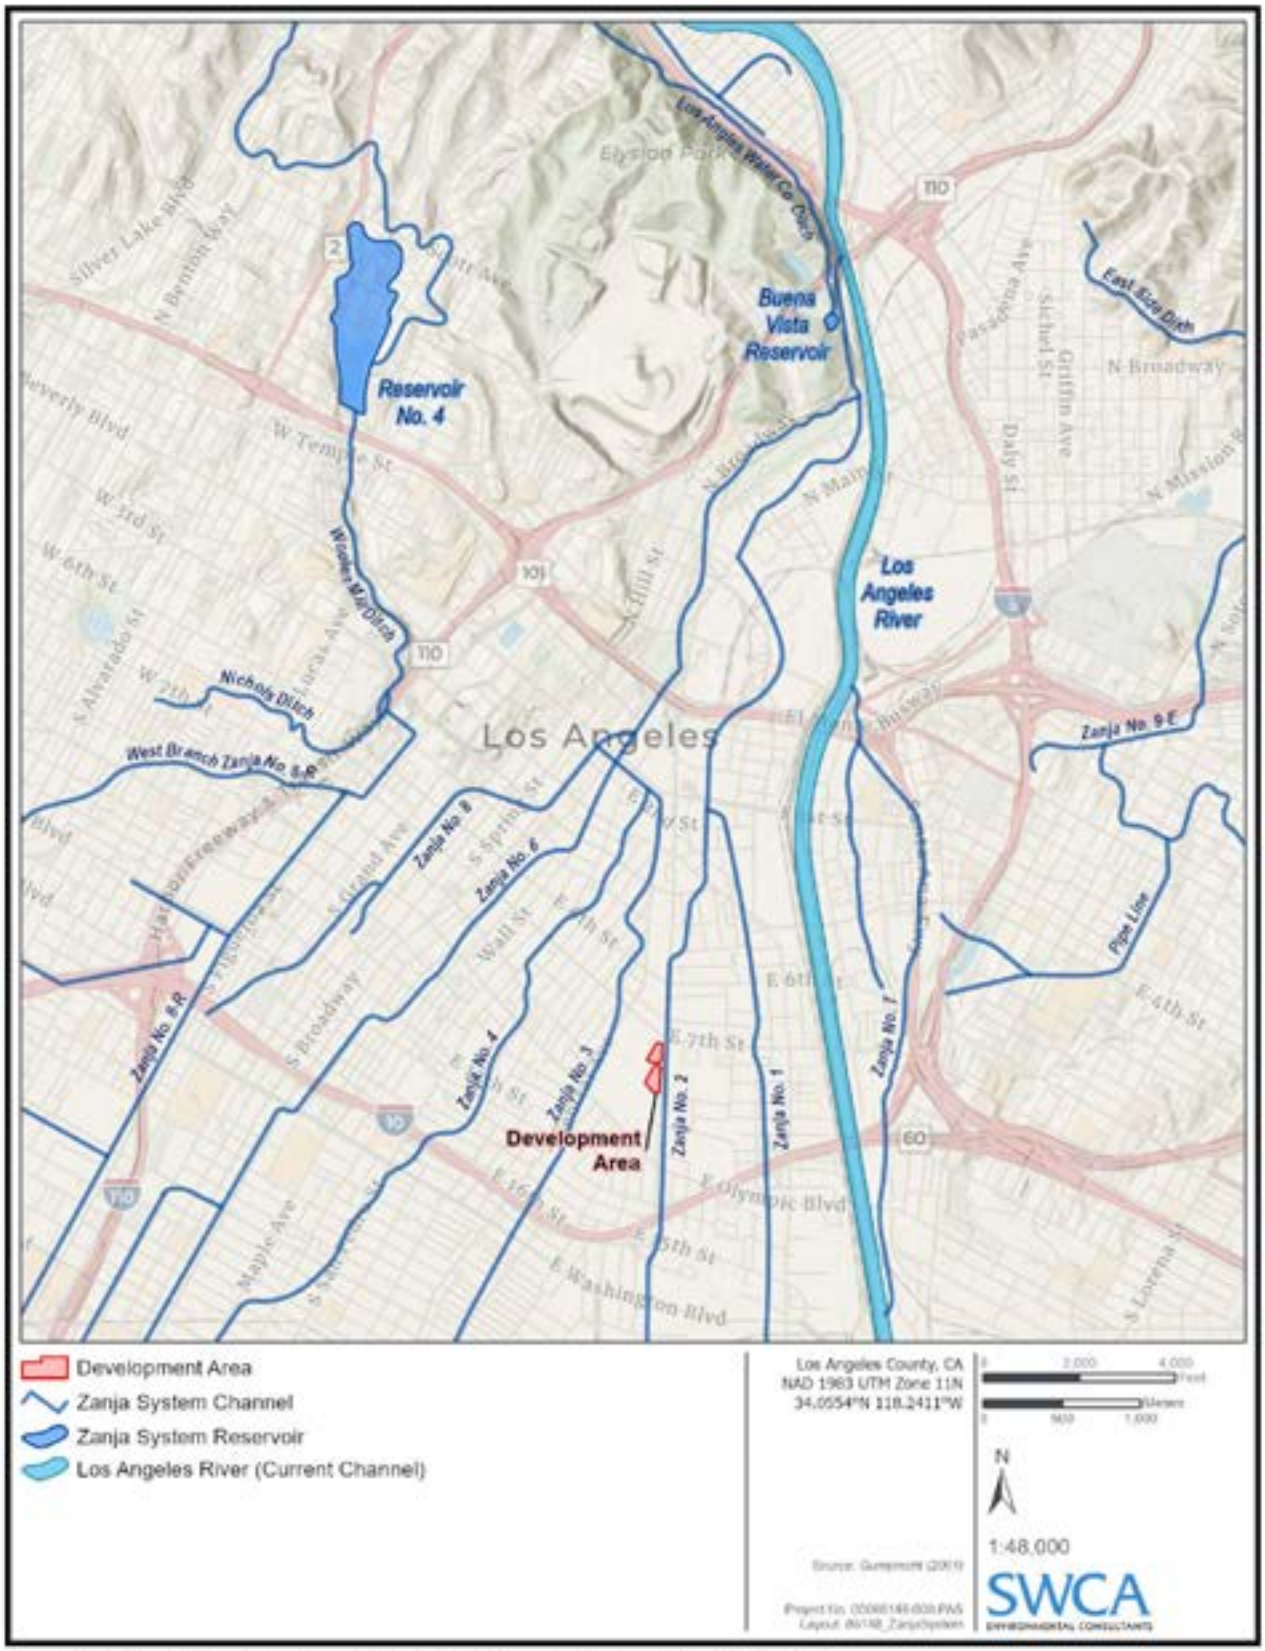

Figure 11. Los Angeles zanja system, ca. 1880s (Gumprecht 2001).

Though the zanjas were a crucial water supply in early Los Angeles, they also served as waste disposal and a sewer system for early residents (Sklar 2008:19). Dead animals were frequently found in the zanjas and, in some cases, even deceased people. Not surprisingly, dysentery during this period was common. Despite the public knowledge that the zanja water was unsanitary, people continued bathing, washing, and dumping in the zanjas. Over time, the city attempted to stop the constant bathing and washing in the main zanja; however, even after a law was passed explicitly prohibiting "bathing, washing clothes, dumping refuse, and the slaughter of cattle in the zanjas," all practices remained commonplace (Gumprecht 2001:62).

As time went on, many of the zanjas began to be upgraded from their original open ditches to more permanent structures. This first happened in 1877, when the City created its first comprehensive plan to improve and extend the zanjas using a bond measure of $75,000. Sometime during this period, many of the original zanjas were upgraded to cement or wrought iron pipe. Useful in determining the status of each zanja during this period is Hall's 1888 study on irrigation in California. In this work, Hall describes each zanja segment, providing information on construction type and length. Hall used the terms "low service" and "high service" to reference locations where the zanja diverted water from the Los Angeles River, and he separated the city's irrigation works into east and west districts according to their location with respect to the river.

The expanding system became a network of channels, structures, and reservoirs constructed using varied materials and techniques, much of which were improvised and expedient, giving the system as a whole a patchwork appearance. By 1888 nearly 50 percent of the zanjas in Los Angeles were made of some type of conduit constructed of wooden flumes, cement- or masonry-lined canals, cement and iron pipe, or brick culverts (Hall 1888:545). In one section of Hall's report, he estimates the cost of the zanja system to date, and his explanation for the difficulty of such a task provides important information on the materials and integrity of the various segments:

> The difficulty of arriving at the original cost of works, constructed by 'piecemeal,' in a period of twelve years, under no definite plan, and supervised by successive city officials (and this refers only to the works regarded as permanent and not to the long-built earthen ditches) changes almost every year, without any system of keeping accounts of construction segregated from ordinary maintenance expense, can scarcely be appreciated until one attempts the task. Much of the work has been done several times over; ditches have been flumed, and after a time the flumes replaced with pipe; pipe-lines have been, locally but radially, altered and enlarged; iron pipe substituted for cement pipe, and vice versa; and no small part of the work has been abandoned and fallen into disuse. (Hall 1888:547–548)

Many projects to improve the system, such as constructing a tunnel to replace part of the Zanja Madre, were started but never completed (Hall 1888:565). Though the zanjas were improved greatly between 1870 and 1888, when Hall conducted his study, the water system in Los Angeles was crude and not in keeping with the rapid development occurring. The last 20 years of the nineteenth century brought many changes to Los Angeles; the real estate boom of the 1880s created a fivefold population increase in the city by 1890. This population increase had the added result of decreasing the City's irrigation needs, because many of the original vineyards and orchards had already been abandoned but increasing the City's domestic water needs (Hoffman and Stern 2007:19). Two years after Hall's 1888 survey, the zanjas began to be abandoned, starting first with Zanja No. 5. Slowly, property owners began requesting that zanjas be abandoned, as the unused structures now served as impediments to development (Gumprecht 2001:89). By 1904, all the zanjas had been abandoned; most were filled in, but some continued to be used as sewers (Hoffman and Stern 2007:19).

As shown on Figure 11, the present-day location of the Development Area was between two zanjas: Zanja No. 2 and Zanja No. 3. The segment closest to the Development Area was Zanja No. 2, which extended from the end of Zanja 6-1 at 1st Street between Alameda Street and Virginia Street and ran approximately 13,200 feet down Alameda Street, directly to the east of the Development Area, until reaching 22nd Street (Hall 1888:543–545; Layne 1957:23). Hall describes Zanja No. 2 as a flume box which measured 3 feet wide × 1 foot deep (Hall 1888:545). Zanja No. 3 extended south from the end of the Zanja Madre at Central Avenue between 1st and 2nd Street until reaching 27th Street. Zanja No. 3 is mapped approximately 127 m (415 feet) to the west of the Development Area. According to Hall (1888:546), Zanja No. 3 ran for 12,750 feet, including 4,800 feet of open ditch from 1st to 7th Streets. The remainder of the zanja included 3,200 feet of cement pipe from 7th Street to 12th Street, and an open ditch again running from 12th Street for another 4,700 feet to the City boundary. Zanja No. 3 provided water to several vineyards and orchards, including the lands of prominent Angelenos such as Isidro Reyes, Antonio Coronel, William Wolfskill, and George Dalton (Layne 1952:22).

RESULTS

CHRIS Records Search

Previously Conducted Studies

SWCA received the results of the CHRIS records search from the SCCIC on February 8, 2023. Results of the records search indicate that 29 cultural resources studies have been conducted in and within 0.8 km (0.5 mile) of the Development Area, one of which intersects the Development Area (Table 1). The overlapping report is a 2007 architectural history report on the Los Angeles Wholesale Terminal, where the Project is located. Appendix A includes a confidential records search results map depicting previous cultural resources studies within 0.8 km (0.5 mile) of the Development Area.

Previously Recorded Archaeological Resources

The CHRIS records search identified one archaeological resource outside the Development Area. The resource is a historical archaeological site (LAN-4460H) recorded approximately 0.6 km (0.4 miles) to the northwest of the Development Area. This site included trash scatters and various features associated with the foundations of former buildings occupied in the mid to late nineteenth century. Appendix A includes a confidential records search results map depicting previously recorded resources within 0.8 km (0.5 mile) of the Development Area.

NATIVE AMERICAN SITES IN DOWNTOWN LOS ANGELES

There are five sites recorded within downtown Los Angeles area that have Native Americans associations, they are between 1.25 and 1.75 miles from the Development Area, which is outside the 0.5-mile records search radius used for the CHRIS records search. Given that these sites were not identified in the CHRIS records search, they are briefly mentioned below to provide a more complete characterization of the Native American archaeological record in the downtown Los Angeles area. The five sites include the following: a major Native American settlement containing multiple human burials (LAN-1575/H); an isolated bone from a Native American who lived more than 3000 years ago (LAN-4662); two sites (LAN-7/H and P-19-100515) containing a small number of artifacts that could be associated with Native American activities; and the Los Angeles Plaza Cemetery site (LAN-4218H), which historical records document as having individuals of Spanish, Mexican, Native American, and varied heritage buried in the cemetery. The location of these sites is shown on a confidential map included in Appendix A.

NON-ARCHAEOLOGICAL RESOURCES

Notably, the Project Site includes an industrial complex historically called the Los Angeles Union Wholesale Terminal, previously owned by the Southern Pacific Railroad (SPRR), which currently encompasses a total of eight buildings, including seven large industrial buildings that were constructed between 1917 and 1923 (collectively the "District"); there is also an extant parking garage constructed in 2016 that is excluded from the District. The District was formally determined eligible for the NRHP in 1997 through the Section 106 review process and is thereby also included in the CRHR. There are no archaeological resources associated with the District and SWCA's CHRIS records search omitted non-archaeological resources, but the presence is noted because of its relevance to the land-use history vis a vis industrial uses of the same period as the District. The District and the Project's impacts to the District are analyzed in a separate technical report (ARG 2024).

Sacred Lands File Search

The NAHC transmitted the results of an SLF search in a letter dated January 19, 2024. The NAHC indicated the SLF results were positive and noted that the Gabrieleño Band of Mission Indians – Kizh Nation should be contacted for additional information. In their letter, the NAHC noted that tribes do not always record their sacred sites in the SLF, nor are they required to, so additional outreach or consultation may be necessary to determine if there are resources present that are only known by individual tribes. The NAHC's letter included an attachment with a list of 12 Native American contacts representing eight tribal organizations who may have knowledge of cultural resources in or near the Development Area study area. Appendix B includes the SLF results letters. All requests for information from California Native American tribes was conducted as part of the outreach process pursuant to MM 4.15-1(a) of the MMP from the Program EIR and the results are described below.

Archival Research

The following section summarizes the results of SWCA's archival research conducted using maps, ground and aerial photographs, illustrations, archaeological data, and other sources associated with historical land uses within and near the Development Area. Because of the proximity to mapped segments of Zanja No. 2 and Zanja No. 3, a detailed analysis of these two zanja system components is provided in the section following the summary of land-uses within the Development Area during the American period.

The plowed field mapped on Ord's 1848 plot of the City is the first documented land use for the Development Area. In the detailed view of Ord's map in Figure 12, the present-day location of the Development Area is depicted in an area mapped as agricultural fields owned by Feliz (Felix) Gallardo. Gallardo's fields are to the west of land owned by Don Antonio Francisco Coronel. Gallardo was born in Mexico in 1826 but sometime before 1848 had moved to Los Angeles. Gallardo's land was primarily used for agriculture, as referenced in the Ord map. In 1856 Gallardo was involved in a gunfight that resulted in his adversary, Jesus Dominguez, being injured. Although Dominguez avoided providing any information to the authorities, Gallardo was ultimately arrested and sentenced to a year in prison at San Quentin (Spitzzeri 2022). Gallardo does not appear to have ever returned to his land and instead moved to San Gabriel where he became a constable and then zanjero before becoming a deputy (Spitzzeri 2022). For the Development Area, it is unclear who was the historical land owner during the 1860s and 1870s; however, a real estate map prepared by Stevenson in 1884 shows the Development Area situated squarely within a property identified as Coronel's (Figure 13). The Coronels likely increased their land holdings in the period between the creation of Ord's and Stevenson's map.

Don Coronel was born in Mexico City in 1817 and moved to Los Angeles in 1834 with his father (Newmark 1954; Guinn 1902; Sanchez 1983:1). During the Mexican-American War, Coronel fought for Mexico, staying in the area after the land became U.S. territory. In 1848, shortly after the end of Mexican-American War and when the news of gold began reaching southern California, Coronel, along with a party of 30 people, rode north to search for gold (Sanchez 1983:476). Coronel stayed in northern California until 1849, after which he returned to Los Angeles. Aside from this brief sojourn north, Coronel spent his adult life in Los Angeles, devoting himself to various public offices most notably Mayor of Los Angeles from 1853 to 1856 and California State Treasurer from 1866 to 1870 (Guinn 1902). In 1873, the 56-year-old Coronel married 22-year-old Marian Williamson, a native Texan who had moved to California in 1859 when she was a child (Guinn 1902). Don Coronel had multiple houses in Los Angeles, including an adobe in Los Angeles near at the corner of Los Angeles Street and Arcadia and a home known as El Recreo near the intersection of 7th Street and Central Avenue on their agricultural fields (Figure 14). A lithograph from the 1880s depict the Coronels' agricultural fields which occupied the current Development Area as well as El Recreo (Figure 15). This lithograph is facing west toward downtown Los Angeles and depicts the Coronels' residence, which would have been near the present-day intersection of 7th Street and Central Avenue. The SPRR rail line is shown along Alameda Street, and portions of the Development Area are present on the left side of the image.

The setting of the Development Area is captured in an 1877 landscape overview of the City, illustrated as a lithograph drawn facing south from the Elysian Hills near what is now Dodger Stadium (Figure 16). At this time the area appeared in much the same way as depicted in Ord's 1849 map. Most of the land surrounding the Development Area was made up of agricultural fields interspersed with small homes. The SPRR line along Alameda Street is visible on this image, indicated by the drawing of the train on the street south of the Development Area.

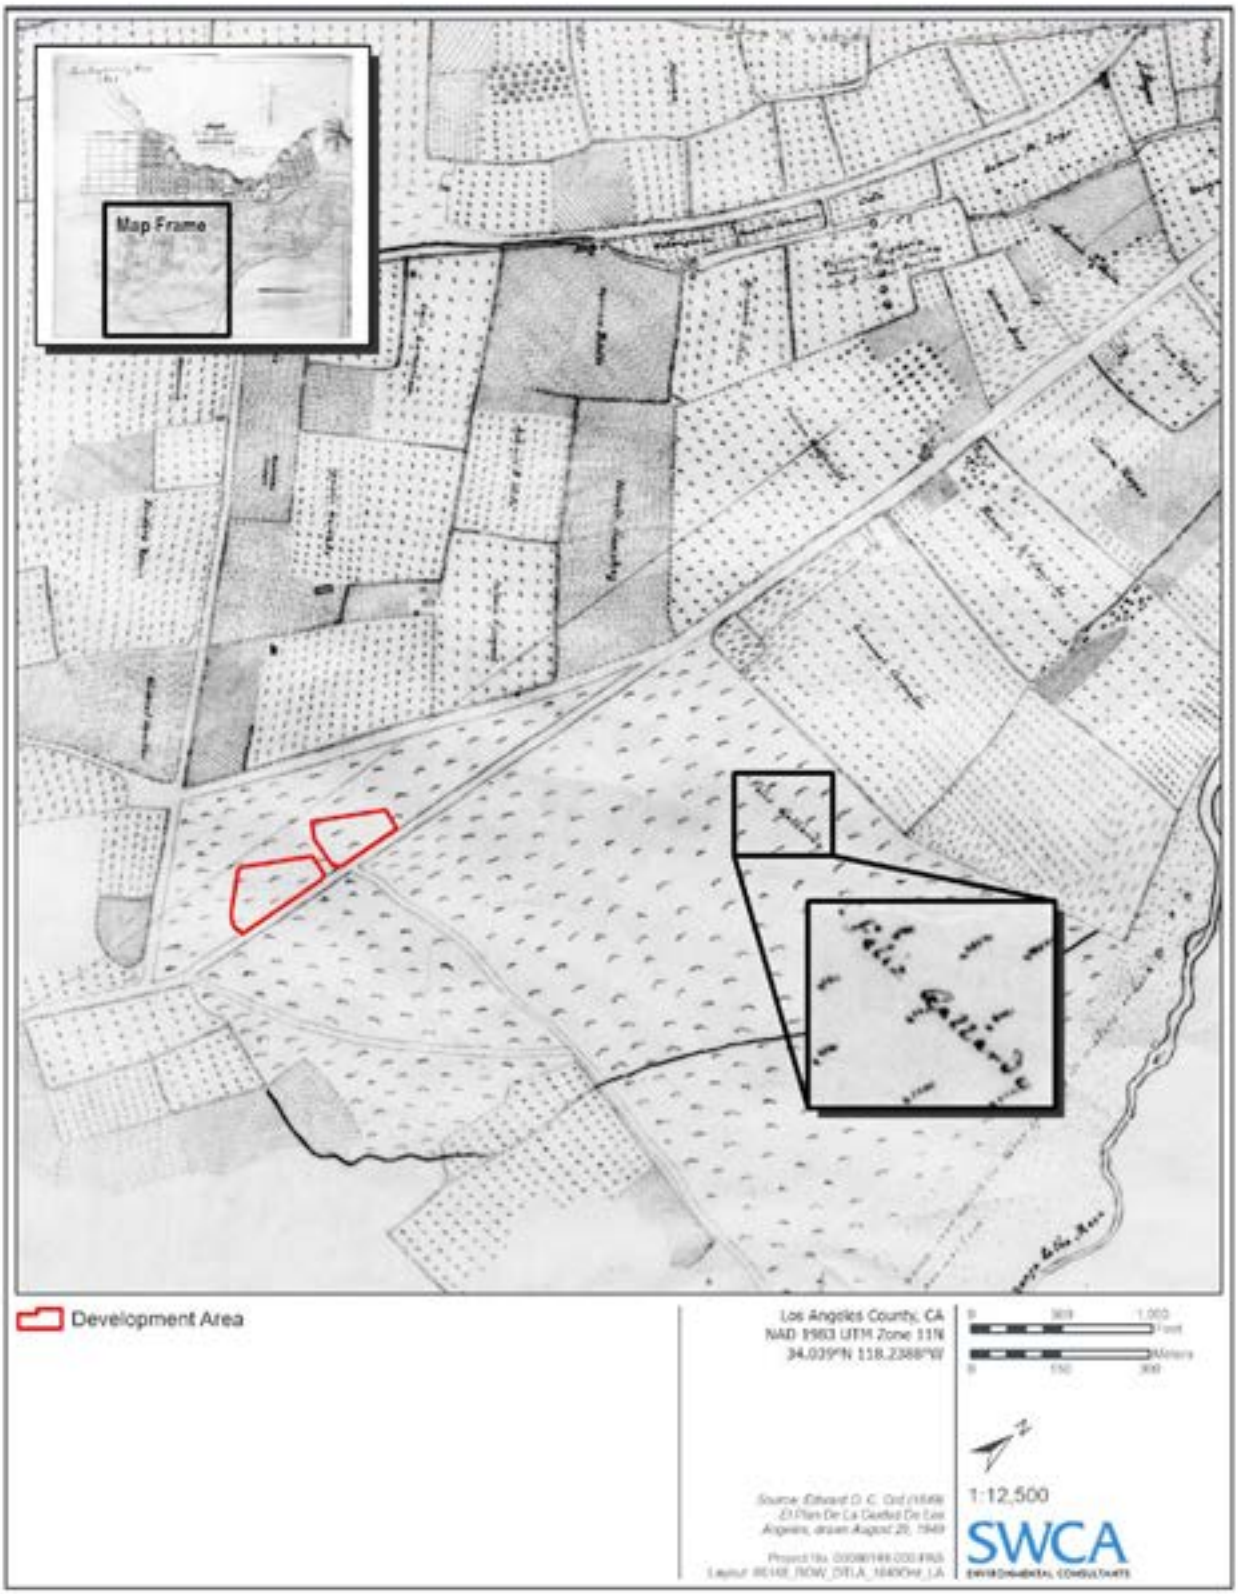

Figure 12. Detailed view of Ord's 1849 map (see inset in top left) annotated with landownership. Feliz Gallardo is identified as the owner of the larger plot (enlarged inset) which encompasses the Development Area location. The map symbology indicates that the Gallardo plot was plowed.

Figure 13. Development Area plotted on H.J. Stevenson's 1884 *Map of the City of Los Angeles, California.*

Figure 14. The Coronels' residence at 7th Street and Central Avenue ca. 1880 (Courtesy of Los Angeles Public Library, Item 00061569)

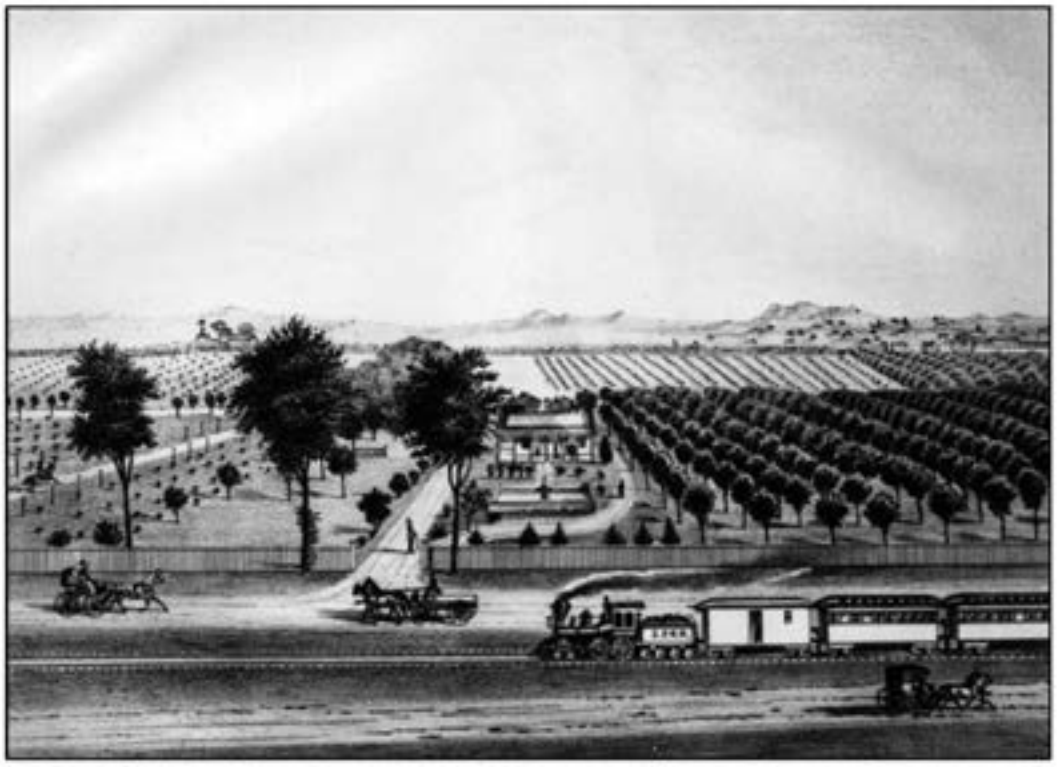

Figure 15. Lithograph of the Coronel residence and surrounding agricultural fields at 7th Street and Alameda Street looking west. Note the SPRR line running along Alameda Street ca. 1880. (Courtesy of Los Angeles Public Library 00078976)

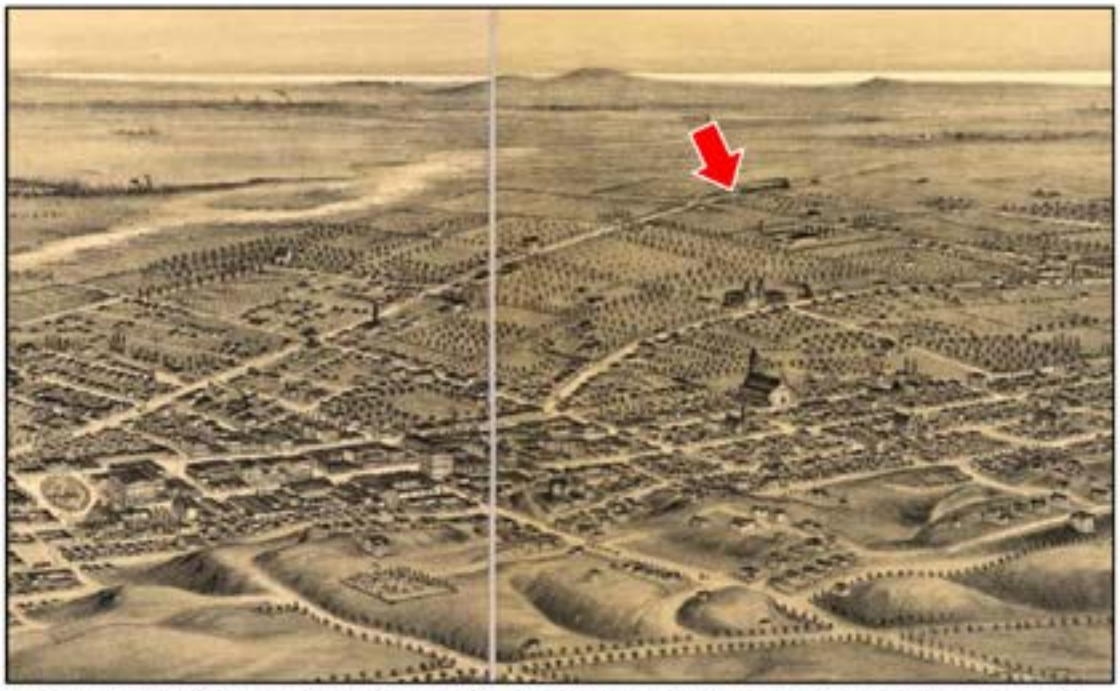

Figure 16. Detailed view of an illustration showing Los Angeles in 1877 (Source: Library of Congress, Control No. 75693093). The view is facing south with the Los Angeles Plaza visible as an oval on the bottom-left corner of the frame. The red arrow indicates the approximate location of the Development Area along Alameda Street.

The Development Area location at 7th and Alameda Streets is visible in a bird's eye view illustration from 1891 (Figure 17). The illustration captures the extent of urbanization that had expanded significantly in the 1880s. The areas north and to the west of the Development Area that once mainly consisted of agricultural fields had been increasingly replaced with residential and commercial uses. The 1891 illustration depicts a train station directly north of the Development Area, and the Development Area itself is developed with two small buildings. A similar illustration from 1894 depicts the Development Area as agricultural land or perhaps simply as a vacant lot. Both maps depict the slow growth of the commercial and industrial center south of the city's historical core. The 1894 illustration shows the Bishop Confectionery Manufacturing Company (Bishop & Company) in a lot directly north of the Development Area—at the northwest corner of 7th Street and Alameda Street (Figure 18). In addition to the Bishop & Company factory, built in 1893, the company operated several other buildings in Los Angeles by the early twentieth century, including one of the buildings within the wholesale terminal at 7th Street and Central Avenue, directly adjacent to the Development Area. Although Bishop & Company was an extremely successful business in the early twentieth century, at one point employing over 1,000 people, the impact of the Great Depression ultimately led to the company's demise, and the company was purchased by Nabisco in 1930 (Berman and Carreno 2008). By 1936, its factory at the northwest corner of 7th and Alameda Street had been demolished; however, the building within which it operated, the wholesale terminal west of the Development Area, remains to this day and has been repurposed for various commercial uses.

Sanborn maps from 1888 and 1894 do not depict the current location of the Development Area, whereas the Sanborn map from 1900 shows a portion of the Development Area location as vacant land, which suggests that the Development Area location either was used for agriculture or was simply vacant land throughout that time. The first Sanborn map that shows developments within the Development Area dates to 1906 (Figure 19). This map shows that the Development Area was a part of the Electric Railway

Company property at that time, and several buildings were present within the area, including four that were entirely or partially within the current-day Development Area boundaries. The next Sanborn Map dates to 1950 and shows that the entire Development Area had been redeveloped (Figure 20). The buildings that once existed in the Development Area and vicinity had been demolished and replaced with the large industrial warehouses that made up the wholesale terminal, many of which still exist today. Within the Development Area, one rectangular building existed in the lot north of the Development Area, and the remainder of the Development Area was used as a rail yard. Sanborn maps from the later 1950s, 1960s, and 1970 do not show any changes to the Development Area.

Aerial imagery available from 1923 onward provides more context on the development of the Development Area throughout the twentieth century. By 1923, the Development Area had begun to be used as a rail yard, and there was one rectangular building present in the lot north of the Development Area, which corresponds to the observations made during the review of Sanborn maps from the 1950s. Aerial imagery from the later 1920s through the 1970s does not show any changes to the use of the Development Area (Figure 21). The first significant change came between 1972 and 1983, when the rail yard, which was present within the Development Area for much of the twentieth century, was demolished and replaced with an at-grade parking lot. The warehouse building was still present within the lot to the north at this time; however, by 1989, this building had been demolished as well, and the space was being used for parking or storage (Figure 22). Aerial imagery from the 1990s and 2000s does not show any changes to Development Area use, although it appears that the area was repaved in the 2000s.

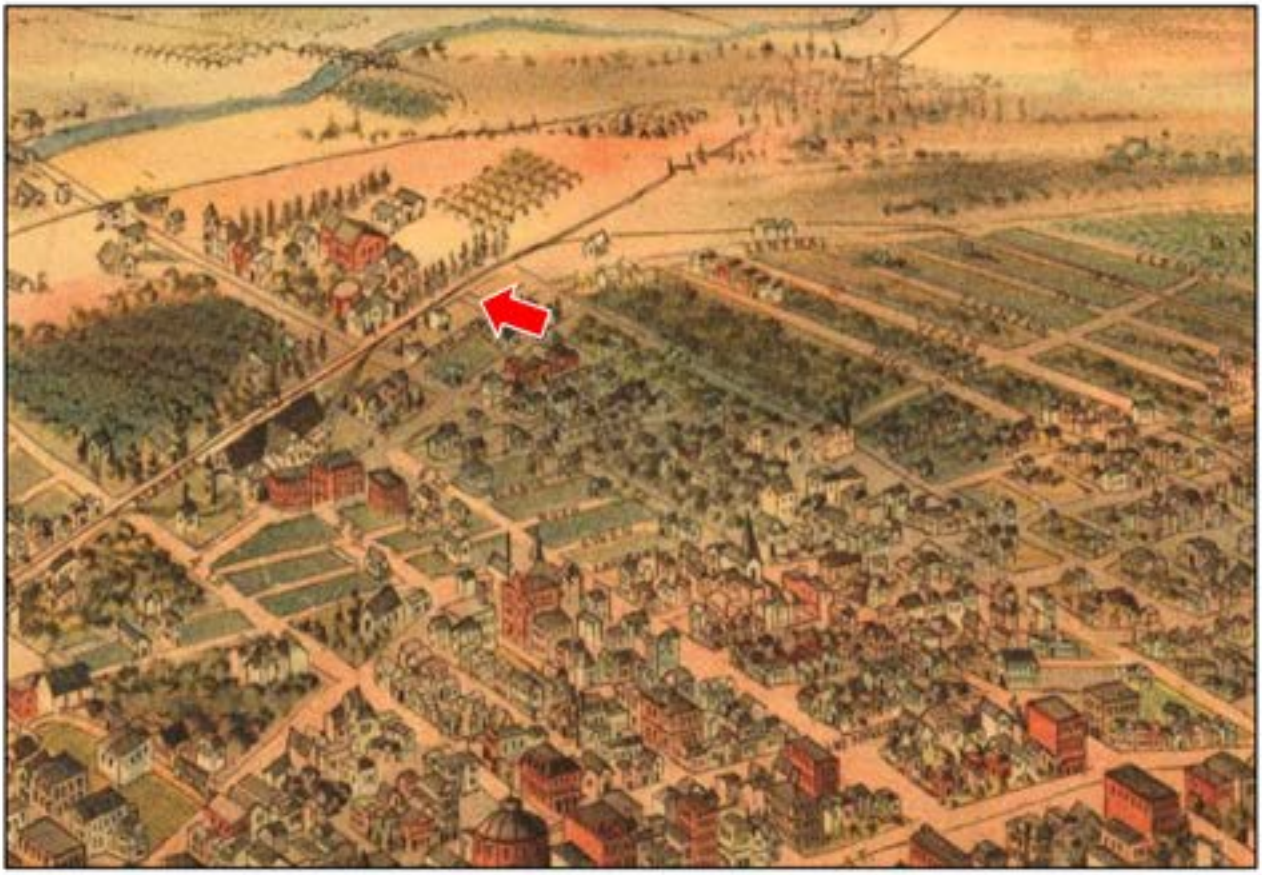

Figure 17. Detail view of a bird's-eye illustration facing southwest, Los Angeles, California, 1891. The Project Site is indicated by the red arrow. (Library of Congress Geography and Map Division Washington, D.C., Control Number 75693095)

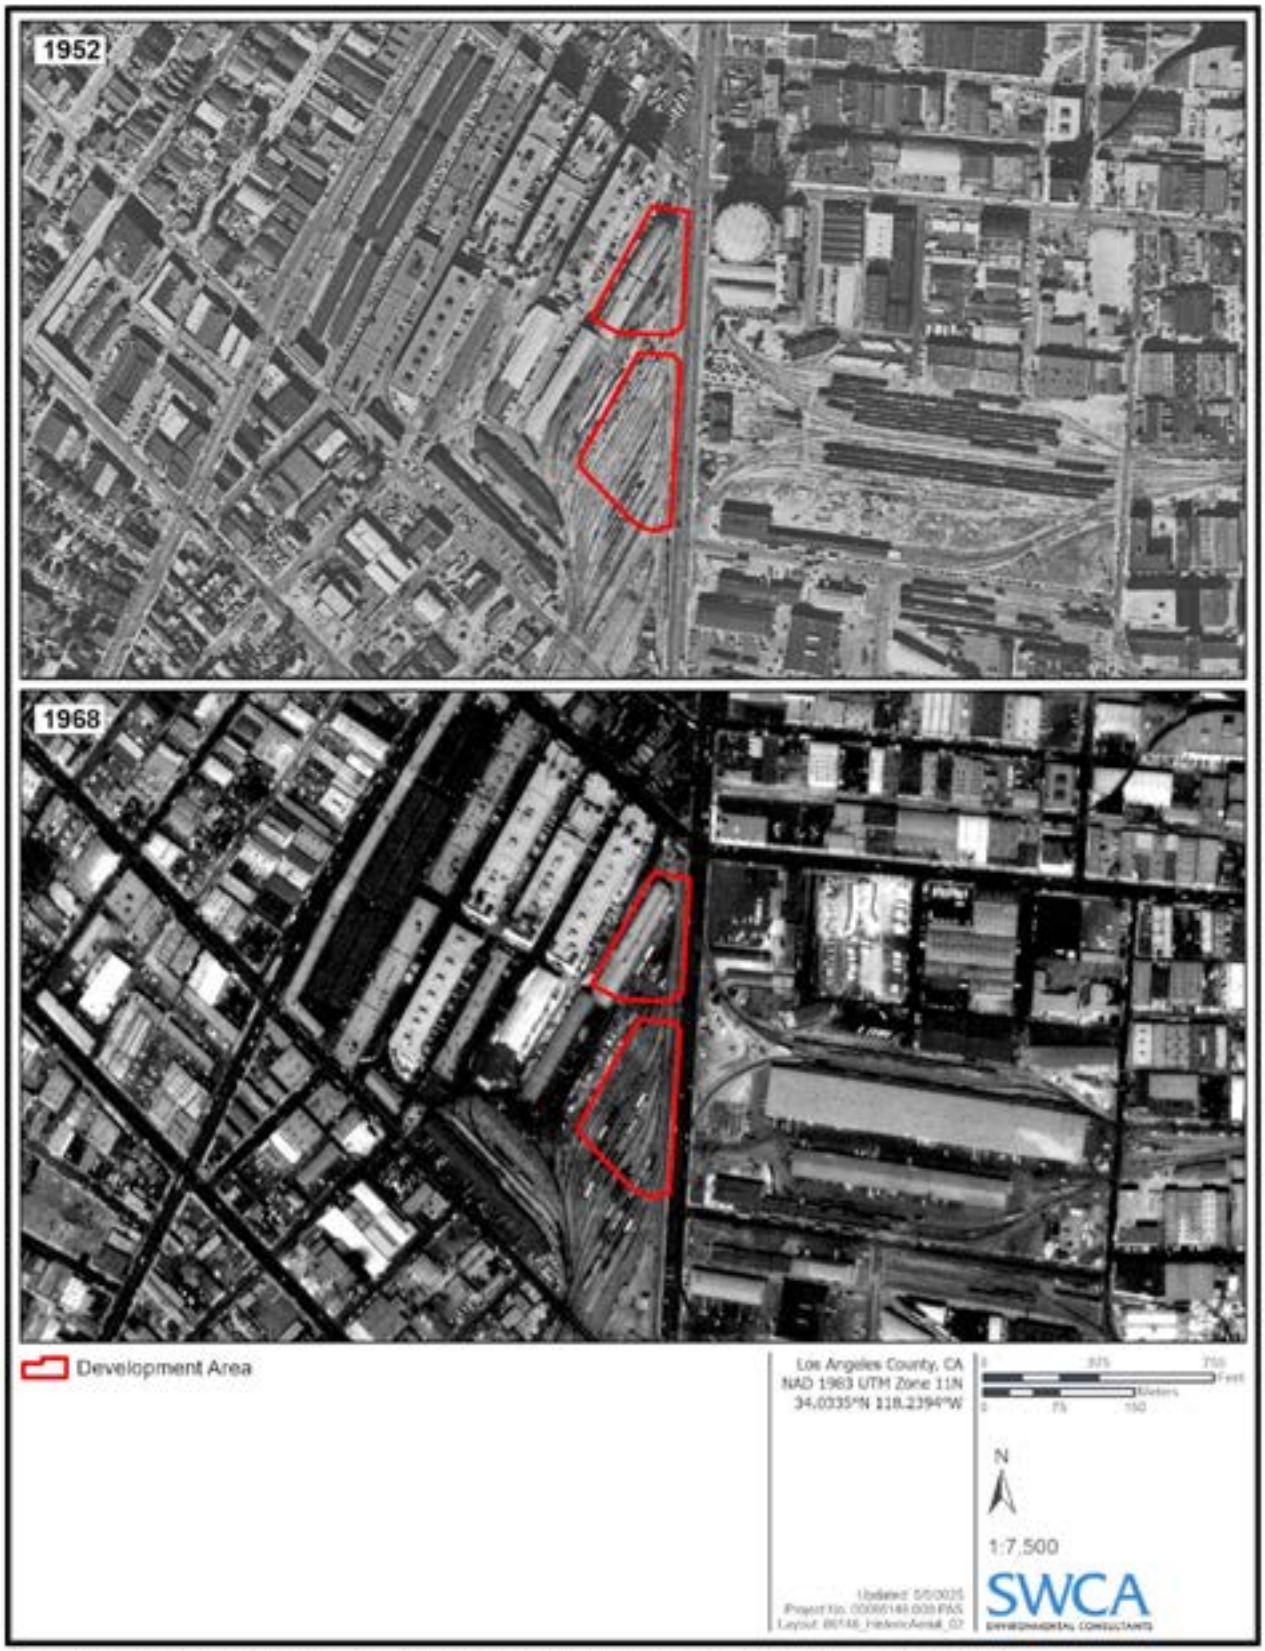

Figure 22. Development Area shown on aerial photographs from 1952 and 1968.

Zanja System Components

Ord's 1849 map of Los Angeles included many of the primary zanja segments, secondary irrigation ditches, and information on the types of crops being grown in the agricultural fields (see Figure 12). Not all the zanjas are easily distinguished on Ord's map, particularly where they were contiguous with roads, fences, and boundaries between fields and landowners, all of which could be immediately adjacent to one another and only depicted by a single line on the map. Zanja No. 2 is not discernible in Ord's map. Zanja No.3 can be identified between agricultural fields on Ord's map west of the location of the Development Area. At this time, Zanja No. 2 and Zanja No. 3 were likely constructed as simple earthen ditches and serviced the numerous agricultural fields in the southern parts of the City. Stevenson's 1884 real estate map (see Figure 13) shows Zanja No. 2 along Alameda Street in the vicinity of the Development Area and Zanja No. 3 in roughly the same location as the irrigation ditch depicted on Ord's 1849 map. Information specific to Zanja No. 2 and Zanja No. 3 is discussed in more detail below.

Zanja No. 2

No segments of Zanja No. 2 have been documented archaeologically. According to archival evidence, this segment ran down Alameda Street from 1st Street to 22nd Street in a flume box (Hall 1888:545). In 1876, a waterwheel that used water from Zanja No. 2 was constructed on Thomas Leahy's property southeast of the Development Area, on the east side of Alameda Street between 7th and 8th Streets (Figure 23). The undated photograph in Figure 23 was taken from Alameda Street, showing the waterwheel on the Leahy property. Although no segments of Zanja No. 2 have been identified archaeologically, a Sanborn Map published in 1900 depicts the zanja running as an open ditch along the northeast side of Alameda Street, opposite the Development Area (Figure 24). The subsequently published Sanborn map from 1906 shows a 10-inch water pipe in the same approximate alignment of Zanja No. 2 down Alameda Street, but it is not labeled as such. Zanja No. 2 was likely abandoned early in the twentieth century as the city began to turn away from agriculture and toward increasing its domestic water supply. Thus, all available evidence suggests that at no point was Zanja No. 2 ever aligned through the Development Area.

Figure 23. Water wheel powered by water from Zanja No. 2. The undated photograph was taken from Alameda Street showing the water wheel on the property of Thomas Leahy on the east side of Alameda Street between 7th and 8th Streets.

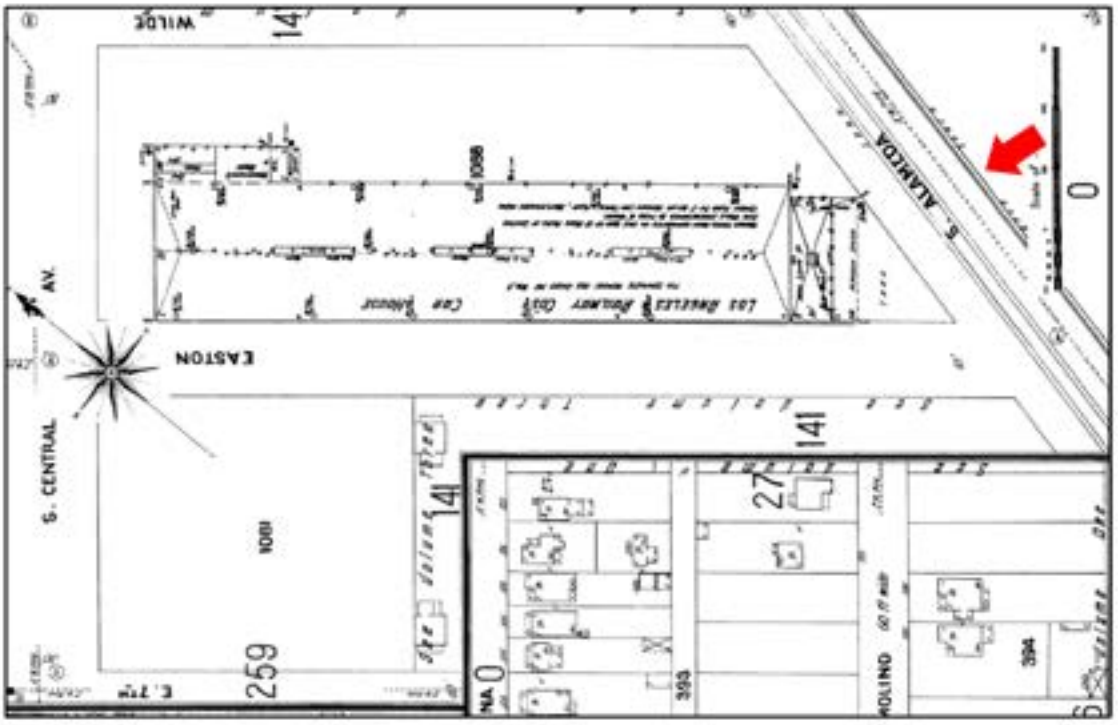

Figure 24. Sanborn published in 1900, which depicts the area north of the Development Area (not shown) and the alignment of Zanja No. 2 (red arrow), labeled "Open Zanja," on the northeast side of Alameda Street.

Zanja No. 3

Historical sources indicate that in the late 1880s, a portion of Zanja No. 3 followed Central Avenue and was constructed as a cement pipe in the segment between 7th Street and 12th Street, which is approximately 265 meters (869 feet) to the west of the Development Area. Zanja No. 3 provided water to several vineyards and orchards, including the lands of prominent Angelenos such as Isidro Reyes, Antonio Coronel, William Wolfskill, and George Dalton (Layne 1952:22). The zanja was likely abandoned by the turn of the century (Hoffman and Stern 2007:19; Louis and Berger 1986). None of the sources reviewed indicate that any portion of Zanja No. 3 crossed or bordered the Development Area.

A segment of Zanja No. 3 was recorded in 1986 by archaeologists with Louis Berger and Associates for the Federal Center Complex Project in an area bound by Aliso, Alameda, Temple, and Los Angeles Streets. Zanja No. 3 was recorded on a Historic American Engineering Record (HAER) and is on file with Library of Congress under HAER No. CA-50; Zanja No. 3 has not been given a designation in the CHRIS records. The segment of Zanja No. 3 that was recorded is approximately 2.11 km (1.3 miles) north of the Development Area. The segment was identified as part of an archaeological testing program and then more fully exposed as part of the data recovery mitigation. The archaeological recording identified a 165-foot-long portion of the original earthen ditch constructed from 1825 to 1831, measuring between 10 and 12 feet wide at the top and six feet at the base, with a depth averaging 5.6 feet below grade. A 36-foot-long brick culvert was constructed in 1869 along the portion of the ditch that crossed the original alignment of Commercial Street. Several associated features were also recovered and included public utility lines and architectural remains. The utilities included an 1869 wooden sewer, 3.5-inch-wide iron gas line, 8-inch-diameter iron water main, and concrete electrical utility trench. The associated structural remains included a brick foundation from the Los Angeles Farming and Milling Company warehouse on Commercial Street (ca. 1883) and a concrete foundation believed to be a structural element of a 1941 Post

Office parking facility. This segment is the only part of Zanja No. 3 that has been recorded archaeologically.

Archaeological Site Preservation

The archaeological preservation conditions within the Development Area are generally poor for surficial deposits, but there is higher potential for encountering subsurface deposits within the Development Area. As detailed in previous sections, historically, the Development Area was in agricultural fields owned by the Coronel family. Available evidence suggests that the area was used for agricultural purposes until the late 1880s or early 1890s. Around the turn of the century the area was developed for industrial and commercial purposes and was used primarily as a railyard for much of the twentieth century. By the end of the 1980s the warehouse building and the railyard that had existed in the Development Area since the 1920s had been demolished and replaced with a paved area used for parking and storage. It appears that the paved lot has been re-paved.

Each historical phase of land use involved physical alterations to the near-surface setting of the Development Area. These changes occurred in a sequence wherein each successive alteration would have influenced the preservation conditions for any archaeological materials that may have been deposited on or below the surface during the prior period of use. These physical alterations may have completely removed any physical evidence of the prior land uses or resulted in those materials and the sediments in which they were embedded becoming intermixed. Agricultural land uses from the Mission, Rancho, and early American periods would have altered any Native American archaeological deposits that may have once existed. Industrial site uses from the early and mid-twentieth century would have altered any deposits of historical archaeological materials.

Removal and intermixing are common occurrences for archaeological deposits in urban settings of Los Angeles, but it is also possible for more deeply buried components to remain relatively intact beneath the altered surface. In other words, the physical alterations resulting from each successive period of land use may not have reached the full depth to which archaeological deposits from previous periods may have accumulated, as has been demonstrated on sites where areas have been excavated or naturally incised (e.g., streambeds), and then became backfilled with refuse. This may be done intentionally to bury trash or other waste materials but may also occur more haphazardly during the process of creating a level surface across a property, which is commonly done during demolition.

Where Native American archaeological deposits are concerned, in areas with high rates of natural deposition, artifacts and features could become deeply buried so that the historical alterations occurred well above the buried site. Site LAN-1575/H was identified during construction of the Metropolitan Water District Headquarters next to Union Station and there was an intact Gabrielino archaeological site identified beneath historical period alterations, and at shallower depths the Native American artifacts had become intermixed with nineteenth- and early twentieth-century materials. Site LAN-4662 consisted of a single 3,000-year-old long bone from a Native American individual that was recovered from 19 feet below the street grade. The bone appeared to have been part of flood deposits, which were composed of coarse-grained sands with poorly sorted and large gravels, from the Los Angeles River. These two examples were recorded between 1.3 and 1.6 mile from the Development Area, respectively.

The examples above demonstrate that Native American archaeological deposits are more likely to be identified when they occur beneath historically modified surfaces, whereas historical archaeological sites may occur anywhere within mechanically altered sediments, the creation of which resulted from the past land uses. These “mechanically altered sediments” are typically characterized as fill in a geotechnical investigation.

Group Delta conducted a geotechnical assessment of the Development Area in 2023 which included borings within the Development Area. Sediment profiles constructed from the results showed a surface stratum described as fill below the asphalt and extending up to approximately 5 feet deep. Below the fill, soils have been mapped as young alluvium (Qyf) (Bedrossian et al. 2012). Young alluvial soils present at the Development Area are Late Pleistocene and Holocene in age. Holocene soils can contain subsurface archaeological deposits, specifically intact Native American sites, whereas only the latest Pleistocene deposits have any potential to contain intact Native American archaeological materials. Sediments deposited before the latest Pleistocene are too old to contain deeply buried archaeological deposits.

Sensitivity Assessment

Native American Archaeological and Tribal Cultural Resource Sensitivity

Ethnographic sources described above have identified the Gabrielino village site of Yaanga as having been 2.25 km (1.4 miles) north of the Development Area. Numerous historic and ethnographic sources place Yaanga in the vicinity of the Pueblo of Los Angeles and what archaeological evidence is available supports the location of the village being west of the Los Angeles River. The location of such a settlement likely shifted over time due to environmental factors, such as the shifting courses of the Los Angeles River, and historical factors, such as the influx of settlers after the founding of the Pueblo of Los Angeles. The precise area that constituted the former village has never been determined archaeologically, but the best estimate based on available information indicates it likely occupied the approximate area between the location of the Metropolitan Water District Headquarters building and west to Fort Moore Hill.

CHRIS records search results did not identify any Native American archaeological resources or potential tribal cultural resources within the Development Area or in the 0.5-mile radius used to conduct the search. The nearest Native American archaeological sites to the Development Area are located over 1.6 km (1 mile) to the north and are mostly centered on the Los Angeles Plaza and Union Station and the Metropolitan Water District Headquarters (LAN-1575/H). The single bone from a Native American individual (LAN-4662) identified 19 feet below ground within Los Angeles River floodplain deposits demonstrates that deeply buried resources can occur; however, this is a very rare occurrence and compared with the volume of floodplain deposits, this one instance does not suggest that all similar deposits have a high likelihood of containing human remains. Rather, the finding at LAN-4662 indicates that the potential for human remains and Native American archaeological sites cannot be completely ruled out based strictly on depth.

The SLF search conducted for the Project was positive, although there was no indication of whether there was a specific known resource identified in the Development Area or whether the positive result indicates sensitivity because of proximity to a known site in the NAHC's confidential file. The relative proximity to LAN-1575/H, which included several Gabrielino burials, could be related to the positive results, but consultation with the Gabrieleño Band of Mission Indians – Kizh Nation would be necessary to make a conclusive determination concerning the positive SLF results.

SWCA assessed the archaeological preservation conditions within the Development Area and found that the naturally deposited alluvial sediments beneath the fill stratum are capable of containing buried Native American archaeological deposits (including potential tribal cultural resources) based on the time period in which the sedimentary unit was formed. Specifically, the underlying alluvium was characterized as young alluvium that is Late Pleistocene to Holocene in age. These deposits appear to be composed of naturally deposited alluvium accumulated as flood plain deposits from the Los Angeles River. Alluvium that is more than 12,500 years in age is too old to contain Native American materials and there is no

archaeological sensitivity. The depth at which the alluvium becomes older than 12,500 years cannot be determined from regional geological studies or sediment profiles produced from the geotechnical testing conducted for the Project. Generally, the sensitivity for Native American archaeological resources decreases with depth beneath the fill stratum, which is estimated to extend approximately 5 feet below grade. The potential for individual artifacts to be recovered from within the fill stratum cannot be ruled out, but the likelihood of intact deposits within this stratum is low.

The location of the Development Area on the edge of the floodplain of the Los Angeles River and in reasonable proximity to a known Gabrielino settlement indicates that this area was more intensively used by Native Americans in the past compared to less intensively used areas within the traditional territory. More intensively used areas are more likely to produce physical evidence of those activities that can be preserved as archaeological deposits. The historical alterations documented within the Development Area have clearly reduced the likelihood that a Native American archaeological site or potential tribal cultural resource may have once been present, but the potential for a buried site cannot be ruled out. Accordingly, SWCA finds the Development Area has moderate sensitivity for Native American archaeological resources and tribal cultural resources. This sensitivity is contained within alluvial sediments that are younger than 12,500 years in age. Sediments older than this are too old to contain Native American archaeological resources or tribal cultural resources. The sensitivity for Native American archaeological resources and tribal cultural resources is low within the fill sediments because of the historical land uses.

Historical Archaeological Sensitivity

Historical land uses within the Development Area were assessed through archival research. The pre-1870s agricultural land uses associated with the Coronel family are not activities that typically produce substantial material deposits or physical evidence. Artifacts and features associated with nineteenth century farms are not commonly found identified in archaeological assemblages in this part of Los Angeles. In contrast, materially reinforced canals (e.g., the Zanja Madre) and remains of former buildings and structures have a greater likelihood of being preserved. Review of other maps from this period do not give any indication that there were ever any buildings or structures constructed within the Development Area during the nineteenth century, and these sources also provided evidence confirming that neither of the nearest known segments of the Zanja System—Zanja No. 2 and Zanja No. 3—passed through the Development Area. The agricultural activities are noteworthy in terms of the diminished potential for Native American archaeological sites, but the likelihood of substantial historical archaeological resources from before the turn of the twentieth century is low within the Development Area.

No information was identified to confirm exactly when the agricultural fields ceased being cultivated, but available evidence suggest it was sometime around 1900. In the first decade of the twentieth century the Development Area was used for industrial purposes related to the Electric Railway Company and multiple buildings existed within the Development Area. However, by the 1920s, all these structures had been demolished and replaced with rail lines and a warehouse structure within the Development Area. These developments were associated with the development of the warehouse terminal built in the vicinity of the Development Area which included the development of the extant buildings to the west of the Development Area. There were very few changes to the Development Area until the 1980s when the existing warehouse and rail yard were demolished and replaced with a paved area used for parking and storage. The only discernible changes to the Development Area since then include the re-paving of the area.

A search of the CHRIS identified one historical archaeological site recorded within a 0.8 km (0.5 mile) radius of the Development Area. This site included trash deposits, foundations, and other features related to the mid- to late nineteenth century. The use of the Development Area as a rail yard for over 50 years suggests that if any physical materials are present within the Development Area, then they are likely

associated with this land-use history. The paving of the Development Area may have preserved underlying deposits related to these activities, such as abandoned railroad ties, nails, and tracks, which are commonly found below ground in former industrial areas. Building materials, miscellaneous pieces of refuse including glass and metal food and beverage containers, and former building foundations are also common and could be present within the Development Area. Bore logs produced as part of the geotechnical investigation conducted for the Project report pieces of brick being identified within the fill stratum at all five bore locations sampled within the Development Area. Based on these findings, SWCA finds the Development Area has high sensitivity for containing historical archaeological resources. This sensitivity is contained within sediments designated as fill, which are estimated to extend from beneath the current pavement to as much as 5 feet below grade.

Outreach to California Native American Tribes

SWCA sent notification letters on July 18, 2025, to the ten (10) tribal representatives who are on the City's list of tribes who have requested consultation under AB 52, which is periodically updated with information provided by the NAHC. One of the letters was returned as undeliverable because the addressee, Charles Alvarez of the Gabrielino-Tongva Tribe, had moved. An electronic copy of the letter was emailed on August 4, 2025.

As of November 4, 2025, one response to the notification letters had been received. The response was submitted on July 28, 2025, by the Gabrieleño Band of Mission Indians-Kizh Nation via email to SWCA. The only content included in the email was a request to provide contact information for the lead agency. SWCA replied on the same day and asked for further clarification on the nature of the request as a means of ensuring the appropriate contact was identified. No response was received to SWCA's reply but the City was contacted by the Gabrieleño Band of Mission Indians-Kizh Nation in August 2025. Through subsequent written correspondence and one conference call, the Gabrieleño Band of Mission Indians-Kizh Nation indicated they consider the Development Area to be sensitive and requested three measures. The measures include requirements for a Native American monitor during ground-disturbing activities (TCR-1), and protocols to follow in the event there is a discovery of a non-funerary/ceremonial tribal cultural resource (TCR-2) or human remains and funerary/ceremonial objects (TCR-3). No other responses to the notification letters have been received. A summary of the tribal outreach efforts is provided below in Table 2.

Table 2. Summary of Outreach to California Native American Tribes

Name, Title	Affiliation	Summary
Rudy Ortega, Tribal President	Fernandeño Tataviam Band of Mission Indians	July 21, 2025: Notification letter delivered via USPS certified mail. August 4, 2025: No response received.
Miguel Luna, THCP Director	Fernandeño Tataviam Band of Mission Indians	July 21, 2025: Notification letter delivered via USPS certified mail. August 4, 2025: No response received.
Andrew Salas, Chairperson	Gabrieleño Band of Mission Indians-Kizh Nation	July 21, 2025: Notification letter delivered via USPS certified mail. July 28, 2025: Response received via email requesting contact information for lead agency July 28, 2025: Email reply from SWCA requesting additional information on the nature of the request. August 4, 2025: No response received. August–October 2025: Email correspondence between City and tribal representative; one conference call discussing. Three mitigation measures submitted to the City.

Name, Title	Affiliation	Summary
Anthony Morales, Chairperson	Gabrieleno/Tongva San Gabriel Band of Mission Indians	July 21, 2025: Notification letter delivered via USPS certified mail. August 4, 2025: No response received.
Sandonne Goad, Chairperson	Gabrieleno/Tongva Nation	July 22, 2025: Notification letter delivered via USPS certified mail. August 5, 2025: No response received.
Robert F. Dorame, Chairperson	Gabrieleno-Tongva Indians of California Tribal Council	July 24, 2025: Notification letter delivered via USPS certified mail. August 4, 2025: No response received.
Charles Alvarez	Gabrieleno-Tongva Tribe	July 27, 2025: Notification letter attempted delivery via USPS certified mail and returned because addressee had moved. August 4, 2025: Electronic copy of the notification letter submitted via email to two email addresses, one included on the NAHC contact list and one in the City of Los Angeles list. An auto-response indicating an invalid email address was received in response to one of the two email addresses. August 4, 2025: No response received.
Donna Yocum, Chairperson	San Fernando Band of Mission Indians	July 25, 2025: Notification letter delivered via USPS certified mail. August 8, 2025: No response received.
Isaiah Vivanco, Chairperson	Soboba Band of Luiseño Indians	July 22, 2025: Notification letter delivered via USPS certified mail. August 5, 2025: No response received.
Thomas Tortez, Chairperson	Torres Martinez Desert Cahuilla Indians	July 22, 2025: Notification letter delivered via USPS certified mail. August 5, 2025: No response received.

DISCUSSION OF RESOURCE SIGNIFICANCE AND IMPACT ANALYSIS

Resource Significance

As mentioned above, no previously recorded archaeological or tribal cultural resources have been identified within or in the vicinity of the Development Area. The average estimated depth of excavation to construct the two levels of subterranean parking beneath Buildings A-B and Building C is 20 feet below grade. The excavation to the respective depths would occur across the full extent of the Project Site in the two areas. Additional excavation to a depth of approximately 28 feet below-grade would be conducted under the elevator pit and associated footings. The potential for as-yet unidentified archaeological resources within the Development Area was assessed based on available evidence and is found to be moderate for Native American archaeological deposits (including potential tribal cultural resources) and high for historical archaeological deposits.

Significance for an archaeological resource is typically found under Criterion 4 of the CRHR, but eligibility is also possible under Criteria 1 and 2 where the archaeological materials can be correlated with a historically significant event or person(s). These are considered in more detail below. Criterion 3 is generally focused on resources that are architectural or structural in nature, which are analyzed as historical resources, not archaeological or tribal cultural. While there could be rare exceptions in which an archaeological resource satisfies Criterion 3, the types of archaeological resources with any reasonable potential of existing in the Development Area are either historic-in-age refuse deposits or scatters of

Native American artifacts, neither of which are at all likely to embody distinctive characteristics in type, period, region, or method, nor are they likely to represent the work of a master or possess high artistic value. As such, a more detailed discussion of the considerations under Criterion 3 is omitted from the subsequent section.

Regardless of the specific significance criteria being considered, determining the integrity and the extent (horizontal and vertical) of any identified archaeological remains is an important component of evaluating CRHR eligibility. Information on the horizontal distribution and vertical depth of the cultural material provides baseline data about the site (e.g., size, presence or absence of subsurface components, discrete activity areas) that contribute to a determination of the site's integrity. For any archaeological site or potential tribal cultural resource to be considered significant, it must satisfy at least one of the CRHR criteria and possess retain integrity (location, design, setting, materials, workmanship, feeling, and association). The integrity of an archaeological site, particularly the elements of location, setting, and association, can be adversely impacted by disturbance from natural or anthropogenic processes.

CRHR Criteria 1 and 2. An archaeological site can be found significant where a direct association can be demonstrated with a historically significant event (Criterion 1) or person (Criterion 2). The Development Area is known to have been owned by Don Coronel, who was a significant person in the history of early Los Angeles, although it is unlikely remains associated with Don Coronel or the period during which he owned the land are present within the Development Area. Additional archival research would be required in order to assess whether any archaeological materials identified in the Development Area (if present) are significant under Criteria 1 and 2. The same integrity considerations described under Criterion 4 would equally apply when determining CRHR eligibility under Criteria 1 and 2.

CRHR Criterion 4. Properties that are significant under Criterion 4 have yielded, or have the potential to yield, information important to the history of the local area, California, or the nation. Evaluations under Criterion 4 should consider whether the archaeological data can contribute to important historic research topics. This evaluation should factor in existing documentary evidence and integrity of the archaeological remains identified.

Properties that are significant under Criterion 4 have yielded, or have the potential to yield, information important to the history of the local area, California, or the nation. The Development Area has a history of industrial uses beginning in the first decade of the twentieth century that continued to the 1980s. The most common deposits preserved within the Development Area are related to the railroad infrastructure and commercial warehouses present within the Development Area. Archaeological deposits that date to this period have the potential to contribute to our understanding of transportation, industrialization, and commerce within Los Angeles during this period.

The integrity of any deposits depends on whether surfaces or features are preserved, and on the potential for identifying and analyzing horizontal and vertical spatial patterning in past behavior. If post-depositional natural or cultural processes have disturbed the context of the artifacts, potential information can be lost or its value highly compromised. As a result, a site with poor integrity often has a diminished capacity to yield information important in history (Criterion 4). Exploring both the horizontal and vertical aspects of the site allows for an evaluation of the information potential of the site and determination of the level of disturbance, if any.

To summarize, evaluations under Criterion 4 should consider whether the archaeological data can contribute to important historic research topics, which for the Development Area could be patterns in historic settlement, demography, consumer behavior, and the nature of land use in the beginning of the twentieth century. This evaluation should factor in existing documentary evidence and integrity of the archaeological remains identified.

Unique archaeological resource. For an archaeological resource to be considered a unique archaeological resource, it must contain information needed to answer important scientific research questions of public interest, possess a unique quality such as being the oldest or best example of a resource type, or be directly associated with a scientifically recognized important historic event or person. (PRC Section 21083.2.) An archaeological site that does not meet the significance threshold for any CRHR eligibility criteria is unlikely to be considered a unique archaeological resource.

Impact Analysis

The following threshold of significance is based on the Cultural and Tribal Cultural Resources sections of the Environmental Checklist contained in Appendix G of the State CEQA Guidelines.

Archaeological Resources

A project would result in significant adverse impacts related to archaeological resources if it would:

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to state CEQA Guidelines Section 15064.5.

No previously recorded archaeological have been identified within the Development Area. At a minimum, any sediments designated as fill within the Development Area have high sensitivity for archaeological resources. Specifically, there is a potential to encounter objects associated with industrial land uses beginning around 1900 throughout the Development Area. The potential for Native American archaeological resources is characterized as being moderate within naturally deposited alluvial sediments that are Holocene in age (less than 12,500 years). The Project requires the excavation and removal of fill and underlying alluvial sediments below the current grade. If present, archaeological resources in the Development Area could yield information important in prehistory or history and thereby satisfy Criterion 4 of the CRHR. Therefore, ground disturbances from the Project could cause a substantial adverse change in the significance of an archaeological resource pursuant to CCR Section 15064.5. Accordingly, SWCA finds that the Project could result in potentially significant impacts to an archaeological resource.

Tribal Cultural Resources

A project would result in significant adverse impacts related to tribal cultural resources if it would:

a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in PRC Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

   i. Listed or eligible for listing in the CRHR, or in a local register of historical resources as defined in PRC Section 5020.1(k), or

   ii. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of PRC Section 5024.1. In applying the criteria set forth in subdivision (c) of PRC Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

No listed tribal cultural resources have been identified within the Development Area. At a minimum, any sediments designated as fill within the Development Area have low sensitivity for a tribal cultural resource. The potential for a tribal cultural resource is characterized as moderate within naturally deposited alluvial sediments that are Holocene-in-age (deposited less than 12,500 years ago). Outreach to

California Native American tribes included a conference call between the City and Gabrieleño Band of Mission Indians-Kizh Nation who indicated they consider the Development Area to be sensitive. No information was submitted by the Gabrieleño Band of Mission Indians-Kizh Nation that indicates there is a known tribal cultural resource in the Development Area, nor was any information submitted to support their sensitivity assessment.

The Project requires the excavation and removal of fill and underlying alluvial sediments below the current grade. If present, a Native American site or feature in the Development Area could yield information important in prehistory or history and thereby satisfy Criterion 4 of the CRHR; if the resource also had cultural value to a California Native American tribe, then the resource would be a tribal cultural resource. Therefore, ground disturbances from the Project could cause a substantial adverse change in the significance of a tribal resource pursuant to CCR Section 15064.5. Accordingly, SWCA finds that the Project could result in potentially significant impacts to a tribal cultural resource.

Feasibility of Preservation in Place

According to CEQA Guidelines 15126.4(b)(3), preservation in place (i.e., avoidance) is the preferred manner of treatment of a significant archaeological site, which would also apply to a tribal cultural resource that is archaeological in nature. If avoidance is not feasible, treatment may include archaeological data recovery (i.e., excavation, laboratory processing, and analysis) to obtain important information and thereby reduce potential impacts under Criterion 4 to less than significant. Architectural documentation of engineered properties may reduce potential impacts under Criterion 3 to less than significant, although there is no indication that any such resources are likely to exist within the Development Area. Treatment options for impacts to archaeological resources eligible under Criteria 1 and 2 typically require the same methodological treatment for resources found eligible under Criterion 4, potentially with more directed and extensive research and analysis components.

Preservation in place may include any of the following: planning construction to avoid archaeological sites; incorporating archaeological sites into a park, greenspace, or open space; covering the archaeological site with a layer of chemically stable soil; and deeding the site into a permanent conservation easement. There are no known, previously recorded archaeological sites identified in the Development Area; therefore, planning for avoidance is not applicable to this Project.

Archaeological sensitivity was assessed as moderate to high, which includes moderate sensitivity for tribal cultural resources. The Project design currently includes substantial amounts of excavation required for the construction of the subterranean parking lots, which very likely precludes the potential for incorporating any archaeological sites that may be discovered during construction into a park, greenspace, or open space, protecting the archaeological site under a soil stratum, or deeding the property into a conservation easement. Thus, if a previously unrecorded archaeological resource is identified within the Development Area and found to be significant, it is very unlikely that preservation in place will be a feasible form of mitigation under any of the examples listed in CEQA Guidelines. Accordingly, measures that allow for archaeological data recovery as a form of mitigative treatment are recommended in the event a previously unrecorded archaeological site is identified during construction and the resource is determined to be significant.

RECOMMENDATIONS AND CONCLUSIONS

Archaeological Resources

Given the moderate to high sensitivity for an archaeological resource within the Development Area, SWCA recommends substituting Section I of Mitigation Measure 4.4-2 of the Program EIR MMP and implementing Section J of Mitigation Measure 4.4-2 of the Program EIR MMP. Section I of Mitigation Measure 4.4-2 requires an archaeological monitor to be present during excavations and provide archaeological sensitivity training to construction personnel prior to initiating construction. This will ensure any archaeological resources that may be present are identified by qualified monitors. No other portions of Mitigation Measure 4.4-2 are recommended to reduce potentially significant impacts because the provisions apply to resources identified before Project construction.

The substitute measure maintains the same requirements in Section I of Mitigation Measure 4.4-2 and adds a provision that requires the qualified archaeologist to prepare a Monitoring Plan. The Monitoring Plan provides details on the implementation of the archaeological monitoring and worker training, as well as the inadvertent discovery protocol described in Section J of Mitigation Measure 4.4-2. Because Native American archaeological resources potentially encountered in the Project Site may also be a tribal cultural resource, SWCA recommends that the Monitoring Plan address both archaeological and tribal cultural resources by incorporating the same requirements described for the "cultural resources monitoring program (CRMP)" as defined in Mitigation Measure 4.15(a). Moreover, because the mitigation measures for each type of resource require equivalent actions to be taken, a Monitoring Plan that addresses both types of resources together will help to ensure consistency during implementation of the mitigation measures. The potential for impacts to an archaeological or tribal cultural resource is the same if the mitigation measures are implemented according to the Monitoring Plan. Thus, substituting Section I of Mitigation Measure 4.4-2 is more effective and will not cause a new significant impact.

Accordingly, SWCA finds that the substitute mitigation measure and Section J of Mitigation Measure 4.4-2 of the Program EIR MMP would reduce potentially significant impacts to archaeological resources to less-than-significant levels.

Substitute Mitigation Measure

> Prior to issuance of a grading permit and prior to the start of any ground-disturbing activity, the applicant shall retain a qualified archaeologist who meets the Secretary of the Interior's Professional Qualification Standards to oversee an archaeological monitor who shall be present during construction excavations, such as demolition, clearing/grubbing, grading, trenching, or any other construction excavation activity associated with the project, including peripheral activities, such as sidewalk replacement, utilities work, and landscaping, which may occur adjacent to the project site. The frequency of monitoring shall be based on the rate of excavation and grading activities, the materials being excavated (younger sediments vs. older sediments), the depth of excavation, and, if found, the abundance and type of archaeological resources encountered. Full-time monitoring may be reduced to part-time inspections, or ceased entirely, if determined adequate by the qualified archaeologist. Prior to commencement of excavation activities, Archaeological Sensitivity Training shall be given for construction personnel. The training session shall be carried out by the qualified archaeologist and shall focus on how to identify archaeological resources that may be encountered during earthmoving activities and the procedures to be followed in such an event.

The details of the monitoring and training shall be summarized in an Archaeological and Tribal Cultural Resources Monitoring Plan (Monitoring Plan) prepared by the qualified archaeologist, in consultation with all interested Tribes, prior to the commencement of ground disturbing activities for the project. The Monitoring Plan shall include compliance with Section J of Mitigation Measures 4.4-2 and Mitigation Measure 4.15-1(b), including the portions referring to the implementation of a Cultural Resources Monitoring Program (CRMP). The Monitoring Plan will provide details regarding the process for infield treatment of inadvertent discoveries of archaeological and tribal cultural resources and the disposition of inadvertently discovered non-funerary resources, and shall be consistent with the treatment of unique archaeological resources in PRC Section 21083.2.

Program EIR Mitigation Measure

Mitigation Measure 4.4-2. Archaeological Resources

J. In the event that historic (e.g., bottles, foundations, refuse dumps/privies, railroads, etc.) or prehistoric (e.g., hearths, burials, stone tools, shell and faunal bone remains, etc.) archaeological resources are unearthed, ground-disturbing activities shall be halted or diverted away from the vicinity of the find so that the find can be evaluated. A 50-foot buffer within which construction activities shall not be allowed to continue shall be established by the qualified archaeologist around the find. Work shall be allowed to continue outside of the buffer area. All archaeological resources unearthed by project development activities shall be evaluated by the qualified archaeologist. If a resource is determined by the qualified archaeologist to constitute a "historical resource" pursuant to CEQA Guidelines Section 15064.5(a) or a "unique archaeological resource" pursuant to Public Resources Code Section 21083.2(g), the qualified archaeologist shall coordinate with the applicant and the City to develop a formal treatment plan that would serve to reduce impacts to the resources. The treatment plan established for the resources shall be in accordance with CEQA Guidelines Section 15064.5(f) for historical resources and Public Resources Code Sections 21083.2(b) for unique archaeological resources. Preservation in place (i.e., avoidance) is the preferred manner of treatment. If, in coordination with the City, it is determined that preservation in place is not feasible, appropriate treatment of the resource shall be developed by the qualified archaeologist in coordination with the City and may include implementation of archaeological data recovery excavations to remove the resource along with subsequent laboratory processing and analysis. Any archaeological material collected shall be curated at a public, non-profit institution with a research interest in the materials, if such an institution agrees to accept the material. If no institution accepts the archaeological material, they shall be donated to a local school, Tribe, or historical society in the area for educational purposes.

Tribal Cultural Resources

Given the sensitivity for a tribal cultural resource within portions of the Development Area, SWCA recommends substituting Mitigation Measure 4.15-1(b) of the Program EIR MMP. Mitigation Measure 4.15-1(b) outlines a process to be followed in the event a potential tribal cultural resource is discovered. The performance standards included in Mitigation Measure 4.15-1(b) are based on the following requirements: temporarily halting work within a radius of 50 feet until the discovery can be assessed by a Qualified Archaeologist and affiliated tribes; retaining a tribal monitor if a tribal cultural resource is identified; identifying appropriate treatment consistent with existing regulations and in consultation with affiliated tribes; observing confidentiality requirements concerning the discovered resource, and; allowing

for adequate documentation of scientific information when applicable. The substitute measure TRC-MM-1 includes provisions that satisfy the same minimum requirements in Mitigation Measure 4.15-1(b) but adds requirements for worker training and tribal monitoring in areas with sensitivity for tribal cultural resources. The substitute measure includes elements of the three measures requested by the Gabrieleño Band of Mission Indians—Kizh Nation, specifically the elements stipulating the requirements for and methods used by a tribal monitor during ground-disturbing activities. The other elements of the measures requested by the Gabrieleño Band of Mission Indians—Kizh Nation are addressed in the other provisions of the substitute measure based on the minimum requirements incorporated from Mitigation Measure 4.15-1(b), such as requirements for tribal consultation while assessing potential tribal cultural resources and identifying appropriate forms of treatment for confirmed resources. The substitute measure also incorporates additional details to clarify the performance standards and ensure compliance with existing regulations, conformance with industry standards and best practices, and compatibility with other mitigation measures for the Project, specifically those for archaeological resources.

The substitute mitigation measure and Section J of Mitigation Measure 4.4-2 require an archaeological monitor to be present during excavations, provide archaeological sensitivity training to construction personnel prior to initiating construction, and then follow an archaeological resource discovery protocol. Details on these procedures would be described in a Monitoring Plan that SWCA recommends be included as part of the substitute measure. The provisions in these measures would apply to a Native American site, feature, or object that may also be a tribal cultural resource. Implementation of substitute measure TCR-MM-1 would ensure that any potential tribal cultural resources discovered during Project activities would be assessed as a tribal cultural resource and subject to appropriate forms of treatment. Specific procedures to implement the inadvertent discovery protocol would already be included in the Monitoring Plan, which would function in the same capacity as and incorporate all performance standards as the CRMP defined in Mitigation Measure 4.15-1(b).

By maintaining the same minimum requirements in Mitigation Measure 4.15-1(b) and adding requirement to conduct tribal monitoring, consistent with the sensitivity assessment and measures requested by the Gabrieleño Band of Mission Indians—Kizh Nation, the substitute mitigation measure TCR-MM-1 is more effective and will not cause a new significant impact to tribal cultural resources. Accordingly, when implemented in conjunction with the substitute measure and Section J of Mitigation Measure 4.4-2, SWCA finds that substitute mitigation measures TCR-MM-1, would reduce potentially significant impacts to tribal cultural resources to less-than-significant levels.

Substitute Mitigation Measure

> **Mitigation Measure TCR-MM-1:** Prior to commencing any Ground Disturbance Activities at the Project Site, the Applicant, or its successor, shall retain a qualified tribal monitor from the Gabrieleño Band of Mission Indians—Kizh Nation (Tribe). Ground Disturbance Activities shall include demolition, excavating, digging, trenching, plowing, drilling, tunneling, quarrying, grading, leveling, clearing, driving posts, augering, backfilling, blasting, stripping topsoil, potholing, pavement removal, grubbing, tree removals, boring or a similar activity at the project site. Prior to the commencement of any Ground Disturbance Activities, the Applicant and the Tribe shall execute an agreement for a tribal monitor at a reasonable rate, determined in good faith, consistent with industry standards, taking into account factors such as the scope and duration of the Project and substantial evidence for the presence or absence of tribal cultural resources. If the terms of service cannot be agreed upon, or if no response is received within 10 days of soliciting a request, the Applicant may contact another California Native American tribe included on the Native American Heritage Commission's Tribal Contact List and request the services of a tribal monitor.

Prior to commencing any Ground Disturbance Activities, the tribal monitor, shall provide Worker Environmental Awareness Program (WEAP) training to construction crews involved in Ground Disturbance Activities that includes information on regulatory requirements for the protection of tribal cultural resources. As part of the WEAP training, construction crews shall be briefed on proper procedures to follow should a crew member discover tribal cultural resources during Ground Disturbance Activities. In addition, workers will be shown examples of the types of resources that would require notifying the tribal monitor. The Applicant shall maintain on the Project Site, for potential City inspection, documentation establishing the WEAP training was completed for all members of the construction crew involved in Ground Disturbance Activities.

The tribal monitor shall observe Ground Disturbance Activities on the Project Site when they are taking place in sediments capable of containing tribal cultural resources, as determined by a Qualified Archaeologist in consultation with the Tribe and supported by substantial evidence. The tribal monitor(s) will complete daily monitoring logs that will provide descriptions and locations of the relevant Ground Disturbing Activities, the type of construction activities performed, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor logs will identify and describe any discovered tribal cultural resources as defined in California Public Resources Code Section 21074. Copies of monitor logs will be provided to the project applicant and/or the City upon request to the Tribe(s). The tribal monitoring shall end when either 1) confirmation is received from the Applicant, in writing, that all scheduled activities pertaining to tribal monitoring and all Ground Disturbance Activities are completed; or 2) the Tribe(s) provides a determination, in writing and supported by substantial evidence, that no future, planned construction activity, and/or development/construction phase at the project site possesses the potential to impact any tribal cultural resources.

In the event that any objects or artifacts that may be tribal cultural resources are encountered during the course of any Ground Disturbance Activities, all such activities shall temporarily cease within the area of discovery, the radius of which shall be 50 feet or otherwise determined by the Qualified Archaeologist in consultation with the tribal monitor, until the potential tribal cultural resource is properly assessed and addressed pursuant to the process set forth below:

1. If the Qualified Archaeologist and Tribe determine the resources are Native American in origin, the Tribe will recommend steps for treatment of all discovered tribal cultural resources in the form and/or manner the Tribe deems appropriate, in the Tribe's reasonable discretion, and for any purpose the Tribe deems appropriate, including for educational, cultural and/or historic purposes.

2. The Applicant shall implement the Tribe's recommendations if the Qualified Archaeologist concludes that the Tribe's recommendations are reasonable and feasible. In addition to any recommendations from the Tribe(s), the Qualified Archaeologist shall develop a list of actions that shall be taken to avoid or minimize impacts to the identified tribal cultural resources substantially in compliance with any applicable federal, state or local law, rule or regulation, including but not limited to Public Resources Code Section 21083.2.

3. Ground Disturbance Activities may recommence outside of the specified radius of the discovery site, so long as this radius has been reviewed by both the archaeological monitor and tribal monitor(s) and determined to be reasonable and appropriate, and so long as the Applicant has complied with all of the

recommendations developed and approved pursuant to the process set forth in Paragraphs 1 and 2 above.

4. Copies of any subsequent archaeological study, tribal cultural resources study or report, detailing the nature of any significant tribal cultural resources, remedial actions taken, and disposition of any significant tribal cultural resources shall be submitted to the South Central Coastal Information Center at California State University, Fullerton and to the Native American Heritage Commission for inclusion in its Sacred Lands File.

5. Notwithstanding Paragraph 4 above, any information that Los Angeles Department of City Planning, in consultation with the Los Angeles City Attorney's Office, determines to be confidential in nature shall not be published under the applicable provisions of the Government Code Sections 7929.000 and 7929.005, and subdivision (d) of Section 15120 of Title 14 of the California Code of Regulations.

6. Archaeological and Native American monitoring and excavation during construction projects will be consistent with current professional standards. All feasible care to avoid any unnecessary disturbance, physical modification, or separation of human remains and associated funerary objects shall be taken.
