Re: Row DTLA (86148) Project, Los Angeles County

Dear Ms. Nicolay:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information submitted for the above referenced project. The results were positive. Please contact the Gabrieleno Band of Mission Indians – Kizh Nation on the attached list for information. Please note that tribes do not always record their sacred sites in the SLF, nor are they required to do so. A SLF search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with a project's geographic area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites, such as the appropriate regional California Historical Research Information System (CHRIS) archaeological Information Center for the presence of recorded archaeological sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. Please contact all of those listed; if they cannot supply information, they may recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify the NAHC. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green

Re: Notification and Information Request for the ROW DTLA Residential Project, Housing Element CEQA Streamlining Checklist, City of Los Angeles, California

Project Address: 757–787 South Alameda Street, 1318–1396 East 7th Street, 736–796 South Central Avenue, 1301–1327 East 8th Street, 700–760 South Market Court, 720–746 South Terminal Street, and 760 South Warehouse Street

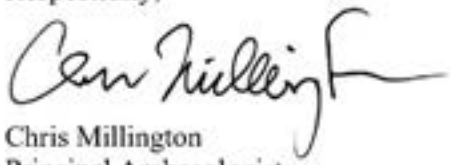
Dear Tribal Representative:

This letter is to inform you that the following proposed project is being reviewed by the Los Angeles Department of City Planning (City Planning) according to the Housing Element CEQA Streamlining Checklist (Form CP-4089):

> The ROW DTLA Residential Project (Project) involves the demolition of existing surface parking lots and the construction of two mixed-use buildings and one multi-family building in a 4.8-acre portion (the Development Area) of an approximately 30.65-acre Project Site. The Project Site is in an expansive industrialized area in the east of Downtown Los Angeles. The area surrounding the Project Site is primarily developed with warehouses, cold storage facilities, small-scale manufacturing operations, and other industrial uses, though in more recent years newer commercial office, commercial retail, and residential uses have been developed in the vicinity of the Project Site. The portion of the Project Site along Central Avenue is used as a wholesale produce market and an outdoor weekend market known as Smorgasburg. Except for 747 South Alameda Street, which is currently vacant, the middle portion of the Site between 7th and 8th Street supports retailers and restaurants and another office and hybrid office/light manufacturing tenants that span multiple industries including technology, apparel, construction, produce wholesale and consumer goods. This area also includes a ten-story concrete parking structure that was built in 2016 and is accessed via South Alameda Street. These existing uses will remain and are not being modified by the Project.
>
> The Project proposes to construct three eight-story new construction buildings, including residential units, parking, and retail and cafe space. The three new buildings—Buildings A, B, and C—would be located just north and south of Center Street, which runs east-west through the Project Site. Buildings A and B would be south of Center Street and Building C would be north of Center Street. Building A would include commercial space at the first floor, residential units at the first through eighth floors, and two levels of subterranean parking. Building B would include residential units at the first through eight floors and two levels of subterranean parking. Building C would consist of

commercial space at the first floor, residential units at the first through eighth floors, and two levels of subterranean parking. All three buildings would be surrounded by landscaping.

Ground disturbances required for the Project would occur during demolition of the existing surface parking lot and excavation for the subterranean parking and elevator pits with associated footings. These activities would be limited to a 4.8-acre area within the Project Site that is designated here as the Development Area and is located at 747–787 South Alameda Street, 1390–1396 East 7th Street, Los Angeles, California, 90021. The Development Area consists of two irregularly shaped areas and is currently developed with paved surface parking and limited ornamental vegetation. The average estimated depth of excavation to construct the two levels of subterranean parking beneath Buildings A-B and Building C is 20 feet below grade. The excavation to the respective depths would occur across the full extent of the Project Site in the two areas. Additional excavation to a depth of approximately 28 feet below-grade would be conducted under the elevator pit and associated footings.



The Los Angeles City Council certified the *Citywide Housing Element 2021-2029 and Safety Element Updates Final Environmental Impact Report* (Program EIR). The proposed Project is within the scope of the Housing Element Program analyzed in the Program EIR, and the environmental clearance for the Project is being analyzed using the Housing Element CEQA Streamlining Checklist (Form CP-4089). The City adopted a Mitigation and Monitoring Program (MMP) for the Program EIR, which describes the procedures and stipulations for implementing mitigation measures to be imposed as conditions of approval by the City on discretionary projects. Mitigation Measure (MM) 4.15-1(a) of the MMP address tribal cultural resources and defines procedures to identify resources and implement applicable impact reduction techniques to reduce substantial adverse effects.

SWCA Environmental Consultants (SWCA) is working as an agent on behalf of the Project Applicant and City. This letter is intended to notify you of the proposed Project pursuant to MM 4.15-1(a) and request any information concerning a tribal cultural resource or likelihood of a potential tribal cultural resource in the Development Area. This information request is not being conducted according to the requirements of Assembly Bill 52 (AB 52), but any information you may wish to provide will be subject to the confidentiality protections provided under Public Resources Code Section 21082.3(c), and as such, will not be included in any publicly circulated documents.

We request that you please respond within 14 calendar days of receipt of this letter to notify us if you have input or questions about the proposed Project. Please provide your contact information and send your request via U.S. mail and/or email to:

Re: Notification and Information Request for the ROW DTLA Residential Project, Housing Element CEQA Streamlining Checklist, City of Los Angeles, California

Project Address: 757–787 South Alameda Street, 1318–1396 East 7th Street, 736–796 South Central Avenue, 1301–1327 East 8th Street, 700–760 South Market Court, 720–746 South Terminal Street, and 760 South Warehouse Street

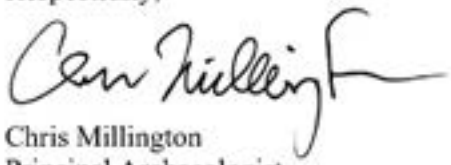
Dear Tribal Representative:

This letter is to inform you that the following proposed project is being reviewed by the Los Angeles Department of City Planning (City Planning) according to the Housing Element CEQA Streamlining Checklist (Form CP-4089):

> The ROW DTLA Residential Project (Project) involves the demolition of existing surface parking lots and the construction of two mixed-use buildings and one multi-family building in a 4.8-acre portion (the Development Area) of an approximately 30.65-acre Project Site. The Project Site is in an expansive industrialized area in the east of Downtown Los Angeles. The area surrounding the Project Site is primarily developed with warehouses, cold storage facilities, small-scale manufacturing operations, and other industrial uses, though in more recent years newer commercial office, commercial retail, and residential uses have been developed in the vicinity of the Project Site. The portion of the Project Site along Central Avenue is used as a wholesale produce market and an outdoor weekend market known as Smorgasburg. Except for 747 South Alameda Street, which is currently vacant, the middle portion of the Site between 7th and 8th Street supports retailers and restaurants and another office and hybrid office/light manufacturing tenants that span multiple industries including technology, apparel, construction, produce wholesale and consumer goods. This area also includes a ten-story concrete parking structure that was built in 2016 and is accessed via South Alameda Street. These existing uses will remain and are not being modified by the Project.
>
> The Project proposes to construct three eight-story new construction buildings, including residential units, parking, and retail and cafe space. The three new buildings—Buildings A, B, and C—would be located just north and south of Center Street, which runs east-west through the Project Site. Buildings A and B would be south of Center Street and Building C would be north of Center Street. Building A would include commercial space at the first floor, residential units at the first through eighth floors, and two levels of subterranean parking. Building B would include residential units at the first through eight floors and two levels of subterranean parking. Building C would consist of

commercial space at the first floor, residential units at the first through eighth floors, and two levels of subterranean parking. All three buildings would be surrounded by landscaping.

Ground disturbances required for the Project would occur during demolition of the existing surface parking lot and excavation for the subterranean parking and elevator pits with associated footings. These activities would be limited to a 4.8-acre area within the Project Site that is designated here as the Development Area and is located at 747–787 South Alameda Street, 1390–1396 East 7th Street, Los Angeles, California, 90021. The Development Area consists of two irregularly shaped areas and is currently developed with paved surface parking and limited ornamental vegetation. The average estimated depth of excavation to construct the two levels of subterranean parking beneath Buildings A-B and Building C is 20 feet below grade. The excavation to the respective depths would occur across the full extent of the Project Site in the two areas. Additional excavation to a depth of approximately 28 feet below-grade would be conducted under the elevator pit and associated footings.



The Los Angeles City Council certified the *Citywide Housing Element 2021-2029 and Safety Element Updates Final Environmental Impact Report* (Program EIR). The proposed Project is within the scope of the Housing Element Program analyzed in the Program EIR, and the environmental clearance for the Project is being analyzed using the Housing Element CEQA Streamlining Checklist (Form CP-4089). The City adopted a Mitigation and Monitoring Program (MMP) for the Program EIR, which describes the procedures and stipulations for implementing mitigation measures to be imposed as conditions of approval by the City on discretionary projects. Mitigation Measure (MM) 4.15-1(a) of the MMP address tribal cultural resources and defines procedures to identify resources and implement applicable impact reduction techniques to reduce substantial adverse effects.

SWCA Environmental Consultants (SWCA) is working as an agent on behalf of the Project Applicant and City. This letter is intended to notify you of the proposed Project pursuant to MM 4.15-1(a) and request any information concerning a tribal cultural resource or likelihood of a potential tribal cultural resource in the Development Area. This information request is not being conducted according to the requirements of Assembly Bill 52 (AB 52), but any information you may wish to provide will be subject to the confidentiality protections provided under Public Resources Code Section 21082.3(c), and as such, will not be included in any publicly circulated documents.

We request that you please respond within 14 calendar days of receipt of this letter to notify us if you have input or questions about the proposed Project. Please provide your contact information and send your request via U.S. mail and/or email to:

Re: Notification and Information Request for the ROW DTLA Residential Project, Housing Element CEQA Streamlining Checklist, City of Los Angeles, California

Project Address: 757–787 South Alameda Street, 1318–1396 East 7th Street, 736–796 South Central Avenue, 1301–1327 East 8th Street, 700–760 South Market Court, 720–746 South Terminal Street, and 760 South Warehouse Street

Dear Tribal Representative:

This letter is to inform you that the following proposed project is being reviewed by the Los Angeles Department of City Planning (City Planning) according to the Housing Element CEQA Streamlining Checklist (Form CP-4089):

> The ROW DTLA Residential Project (Project) involves the demolition of existing surface parking lots and the construction of two mixed-use buildings and one multi-family building in a 4.8-acre portion (the Development Area) of an approximately 30.65-acre Project Site. The Project Site is in an expansive industrialized area in the east of Downtown Los Angeles. The area surrounding the Project Site is primarily developed with warehouses, cold storage facilities, small-scale manufacturing operations, and other industrial uses, though in more recent years newer commercial office, commercial retail, and residential uses have been developed in the vicinity of the Project Site. The portion of the Project Site along Central Avenue is used as a wholesale produce market and an outdoor weekend market known as Smorgasburg. Except for 747 South Alameda Street, which is currently vacant, the middle portion of the Site between 7th and 8th Street supports retailers and restaurants and another office and hybrid office/light manufacturing tenants that span multiple industries including technology, apparel, construction, produce wholesale and consumer goods. This area also includes a ten-story concrete parking structure that was built in 2016 and is accessed via South Alameda Street. These existing uses will remain and are not being modified by the Project.
>
> The Project proposes to construct three eight-story new construction buildings, including residential units, parking, and retail and cafe space. Subject: Notification Letter for the ROW DTLA Residential Project, Los Angeles
Date: Monday, August 4, 2025 9:47:00 AM
Attachments: ROW DTLA - Tribal Outreach Letter_Charles Alvarez.pdf
image001.png

Greetings Mr. Alvarez,

My name is Chris Millington, and I am an archaeologist with SWCA Environmental Consultants based out of Pasadena. You and I have not been introduced, nor have we had any meaningful correspondence, so please forgive the formal nature of this email as an introduction. We recently attempted to send you an outreach letter using the address we were given by the NAHC and City of Los Angeles. The letter was returned as undeliverable, so I am attaching an electronic version as a pdf.

The attached letter provides information on the ROW DTLA Residential Project being assessed through the City's Housing Element CEQA Streamlining process, which requires that notification letters be provided to local tribal representatives, including yourself. If you wish to respond, you are welcome reply to this email or call at either of the numbers listed below.

Thank you in advance for your consideration and I hope we can connect in some capacity in the future.

Best,
Chris

Subject: Undeliverable: Notification Letter for the ROW DTLA Residential Project, Los Angeles

Your message to roadkingcharles@aol.com couldn't be delivered.

When Office 365 tried to send your message, the receiving email server outside Office 365 reported an error.

cmillington	**Office 365**	**roadkingcharles**
Sender		**Action Required**
		Policy violation or system error

How to Fix It

Check the "Reported Error" from the "Error Details" section shown below for more information about the problem. The error might tell you what went wrong and how to fix it. For example, if the error states that the message was blocked due to a potential virus or because the message was too large, try sending the message again without attachments.

If you're not able to fix the problem, it's likely that only the recipient's email admin can fix it. Contact the recipient by some other means (by phone, for example) and ask them to tell their email admin about the problem. Give them the "Reported Error" from the "Error Details" section below.

Was this helpful? Send feedback to Microsoft

More Info for Email Admins

Status code: 550 5.0.350

The error reported by the receiving server wasn't specific enough to determine the exact

nature of the problem. These errors often indicate the message violates a security or policy setting configured on the recipient's email servers.

If the sender is unable to fix the problem by modifying their message, then it's likely a problem that only the recipient's email admin can fix. Try the following:

Check the error for information about the problem - The "Reported Error" returned by the external email server can be found in the "Error Details" section below. This error might tell you what went wrong and provide clues for how to fix it. For example, if the error states the message was rejected due a Sender Policy Framework (SPF) issue, then you'll have to work with your domain registrar to correctly configure your domain's SPF records.

Check the error for information about where the problem is happening - For example, look for a domain name like contoso.com. A domain name in the error might suggest who is responsible for the error. It could be the recipient's email server, or it could be a third-party service that your organization or the recipient's organization is using to process or filter email messages.

If you can't fix the problem, contact the responsible party's email admin - Give them the error code and error message from this non-delivery report (NDR) to help them troubleshoot the issue. For security or policy violation issues, it might be sufficient for them to just add your sending IP addresses or domain to their allowed senders list.

It's likely that only the recipient's email admin can fix the problem. Unfortunately, it's unlikely Office 365 Support will be able to help with these kinds of externally reported errors.

SWCA Project No. 86148

May 27, 2025

EXECUTIVE SUMMARY

Purpose and Scope: SWCA Environmental Consultants (SWCA) prepared this paleontological resources assessment for the ROW DTLA Residential Project (Project) in an industrialized area in the east of the Downtown Los Angeles, California. The Project proposes the demolition of existing surface parking lots and the construction of two mixed-use buildings and one multi-family building, all including subterranean parking structures. The proposed Project is within a portion of the existing ROW DTLA site (the "Project Site"), which comprises three parcels that measure approximately 30.65 acres. Ground disturbances for the Project would be limited to an approximately 4.8-acre portion of the Project Site referred to as the "Development Area." The Development Area consists of two discontinuous areas, north and south of Center Street, on the west side of Alameda Street between 7th Street and Bay Street. Ground-disturbing activities for the Project include demolition of the existing surface parking lot and excavation to an average depth of 20 feet below grade for new subterranean parking structures within the northern and southern portions of the Development Area, as well as excavation to a depth of 28 feet below grade within discrete locations for elevator pits and associated footings. Because the potential for impacts to archaeological and tribal cultural resources is limited to those areas subject to ground-disturbing activities, this study primarily focuses on the Development Area.

The Project is subject to the California Environmental Quality Act (CEQA), and the City of Los Angeles (City) Department of City Planning (DCP) is the lead agency. This assessment was conducted to determine the potential for the Project to impact paleontological resources that may be present in the Development Area and provide mitigation recommendations, as appropriate, pursuant to the requirements of the City's the Housing Element CEQA Streamlining Checklist established under the *Citywide Housing Element 2021-2029 and Safety Element Updates Final Environmental Impact Report* (Program EIR). The proposed Project is within the scope of the Housing Element Program analyzed in the Program EIR, and this assessment incorporates relevant measures from the Mitigation and Monitoring Program (MMP) adopted for the Program EIR. Mitigation Measure 4.5-1(a–d) of the MMP addresses paleontological resources and defines a process for identifying resources and implementing applicable impact reduction techniques to reduce substantial adverse effects.

SWCA prepared this paleontological resources assessment for the Project in compliance with Mitigation Measure 4.5-1(a) (Paleontological Procedures for Discretionary Projects) of the MMP. This report presents the results of a study conducted by a qualified paleontologist that includes a review of geologic maps, scientific literature, confidential fossil locality records from the Natural History Museum of Los Angeles County (NHMLA), and other relevant information used to analyze the paleontological sensitivity within the Development Area. This technical report also includes a discussion of potential impacts to scientifically significant paleontological resources and provides mitigation recommendations to reduce potential impacts to less-than-significant levels consistent with the mitigation measures put forward in the MMP for the Program EIR.

Dates of Investigation: SWCA reviewed geological mapping, literature, and Project information in February of 2024, and received the results of a museum records search from the NHMLA on February 11, 2024.

Summary of Findings: Geologic mapping indicates the entire Development Area contains late Pleistocene (11,700–129,000 years ago) Young Alluvium, Unit 2. The geotechnical report prepared for this Project also noted recent (less than 100 years ago) artificial fill in the Development Area from the surface to depths of 5 feet, with unspecified alluvial deposits consistent with those mapped in and near the Development Area to a depth of 50 feet. NHMLA has no records of known fossil localities from within the bounds of the Development Area, but the museum has several fossil localities in the vicinity from similar deposits as those present within the Development Area. Based on this assessment, artificial fill has

no paleontological sensitivity, and the Young Alluvium, Unit 2 has high paleontological sensitivity. Ground disturbance associated with this Project is expected to extend into deposits with high paleontological sensitivity, and any significant fossils encountered during ground disturbances in previously undisturbed sediments of high paleontological sensitivity would be at risk for damage or destruction from construction activities, which would constitute a potentially significant impact.

Recommendations and Conclusion: SWCA recommends implementation of Mitigation Measures 4.5-1(b), 4.5-1(c), and 4.5-1(d) as described in the Program EIR MMP. These conditions require the following: administering a training to workers (Mitigation Measure 4.5-1[b]); construction monitoring by a qualified specialist during ground-disturbing activities within paleontologically sensitive areas ((Mitigation Measure 4.5-1[c]); and ensuring appropriate treatment of fossils discovered during the Project (Mitigation Measure 4.5-1[d]). These measures would be sufficient to reduce Project impacts to scientifically significant paleontological resources to a less than significant level.

Disposition of Data: This report has been submitted to the Project Applicant and DCP, and a copy will remain on file at SWCA's office in Pasadena, California.

INTRODUCTION

SWCA Environmental Consultants (SWCA) prepared this paleontological resources assessment for the proposed ROW DTLA Residential Project (the Project) in an industrial district east of the downtown area of Los Angeles, California. The Project proposes the demolition of existing surface parking lots and the construction of two mixed-use buildings and one multi-family building, all including subterranean parking. The proposed Project is within a portion of the existing ROW DTLA site (the "Project Site"), which comprises three parcels that measure approximately 30.65 acres. Ground disturbances for the Project would be limited to an approximately 4.8-acre portion of the Project Site referred to as the "Development Area." The Development Area consists of two discontinuous areas, north and south of Center Street, on the west side of Alameda Street between 7th Street and Bay Street. Ground-disturbing activities for the Project include demolition of the existing surface parking lot and excavation for new subterranean parking structures and elevator pits within the northern and southern portions of the Development Area. Because the potential for impacts to archaeological resources is limited to those areas subject to ground-disturbing activities, this study primarily focuses on the Development Area.

The Project is subject to the California Environmental Quality Act (CEQA), and the City of Los Angeles (City) Department of City Planning (DCP) is the lead agency. The Los Angeles City Council certified the *Citywide Housing Element 2021-2029 and Safety Element Updates Final Environmental Impact Report* (Program EIR) (DCP 2021b). The proposed Project is within the scope of the Housing Element Program analyzed in the Program EIR, and the environmental clearance for the Project is being analyzed using the Housing Element CEQA Streamlining Checklist (Form CP-4089). The City adopted a Mitigation and Monitoring Program (MMP) for the Program EIR, which describes the procedures and stipulations for implementing mitigation measures to be imposed as conditions of approval by the City on discretionary projects. Mitigation Measure 4.5-1(a-d) of the MMP addresses paleontological resources and defines a process for identifying resources and implementing applicable impact reduction techniques to reduce substantial adverse effects.

This paleontological resources assessment complies with Mitigation Measure 4.5-1(a) of the MMP. This technical report summarizes the results of a study conducted by a qualified paleontologist to determine the potential for resources to be present within the Development Area, assess if resources are likely to be encountered within the Development Area, analyze the potential for the Project to impact scientifically significant paleontological resources, and recommend mitigation measures to reduce any potential impacts to less-than-significant levels. The methods used in this study include a review of geologic maps, scientific literature, confidential fossil locality records from the Natural History Museum of Los Angeles County (NHMLA), and other relevant information. This assessment follows the guidelines of the Society of Vertebrate Paleontology (SVP) and best practices in mitigation paleontology (Murphey et al. 2019; SVP 2010). The impact analysis is based on the significance thresholds from the Environmental Checklist in Appendix G of CEQA Guidelines. The measures recommended herein are taken exclusively from the MMP for the Program EIR and only incorporate minor revisions to correct typographical errors and add detail to certain performance standards.

This technical report was prepared by SWCA Lead Paleontologist, Sarah Rieboldt, Ph.D. For purposes of compliance with Mitigation Measure 4.5-1(a), Dr. Rieboldt is a qualified paleontologist, which SWCA defines as one who meets the SVP (2010) standards for a qualified professional paleontologist. SWCA Project Manager and Senior Archaeologist Chris Millington, M.A., RPA provided technical input on portions of the project description and regulatory setting. Copies of this report will be submitted to the Applicant and DCP. Research materials and copies of the report will be retained on file with SWCA's office in Pasadena, California.

PROJECT LOCATION AND DESCRIPTION

The Project involves the demolition of an existing surface parking lot and the construction of two mixed-use buildings and one multi-family building in a 4.8-acre portion (the Development Area) of an approximately 30.65-acre Project Site known as ROW DTLA. The Project Site is in an expansive industrialized area in the east of Downtown Los Angeles (Figure 1). The Project Site and Development Area are in Sections 33 and 34 of Township 1 South, Range 13 West, and Sections 3 and 4 of Township 2 South, Range 13 West, which is plotted on the U.S. Geological Survey (USGS) Los Angeles, California, quadrangle (Figure 2). The Project Site occupies an area that is bound by East 7th Street to the north, South Central Avenue to the west, South Alameda Street to the east, and East Olympic Boulevard to the south (Figure 3). The Project Site comprises three irregularly shaped parcels that are associated with the following addresses: 757–787 South Alameda Street, 1318–1396 East 7th Street, 736–796 South Central Avenue, 1301–1327 East 8th Street, 700–760 South Market Court, 720–746 South Terminal Street, and 760 South Warehouse Street.

The area surrounding the Project Site is primarily developed with warehouses, cold storage facilities, small-scale manufacturing operations, and other industrial uses, though in more recent years newer commercial office, commercial retail, and residential uses have been developed in the vicinity of the Project Site. The portion of the Project Site along Central Avenue is used as a wholesale produce market and an outdoor weekend market known as Smorgasburg. Except for 747 South Alameda Street, which is currently vacant, the middle portion of the Project Site between 7th and 8th Street supports retailers and restaurants and another office and hybrid office/light manufacturing tenants that span multiple industries including technology, apparel, construction, produce wholesale and consumer goods. This area also includes a ten-story concrete parking structure that was built in 2016 and is accessed via South Alameda Street. These existing uses will remain and are not being modified by the Project.

The Project proposes to construct three eight-story, new construction buildings, including residential units, parking, and retail and cafe space. The three new buildings—Buildings A, B, and C—would be located just north and south of Center Street, which runs east-west through the Project Site (Figure 4). Buildings A and B would be south of Center Street and Building C would be north of Center Street. Building A would include commercial space at the first floor, residential units at the first through eighth floors, and two levels of subterranean parking. Building B would include residential units at the first through eighth floors and two levels of subterranean parking. Building C would consist of commercial space at the first floor, residential units at the first through eighth floors, and two levels of subterranean parking. All three buildings would be surrounded by landscaping.

Ground disturbances required for the Project would occur during demolition of the existing surface parking lot and excavation for the subterranean parking and elevator pits with associated footings. These activities would be limited to a 4.8-acre area within the Project Site that is designated here as the Development Area (see Figure 3 and Figure 4) and is located at 747–787 South Alameda Street, 1390–1396 East 7th Street, Los Angeles, California, 90021. The Development Area consists of two irregularly shaped areas and is currently developed with paved surface parking and limited ornamental vegetation. The average estimated depth of excavation to construct the two levels of subterranean parking beneath Buildings A-B and Building C is 20 feet below grade. The excavation to the respective depths would occur across the full extent of the Project Site in the two areas. Additional excavation to a depth of approximately 28 feet below-grade would be conducted under the elevator pit and associated footings.

Figure 1. Project vicinity map.

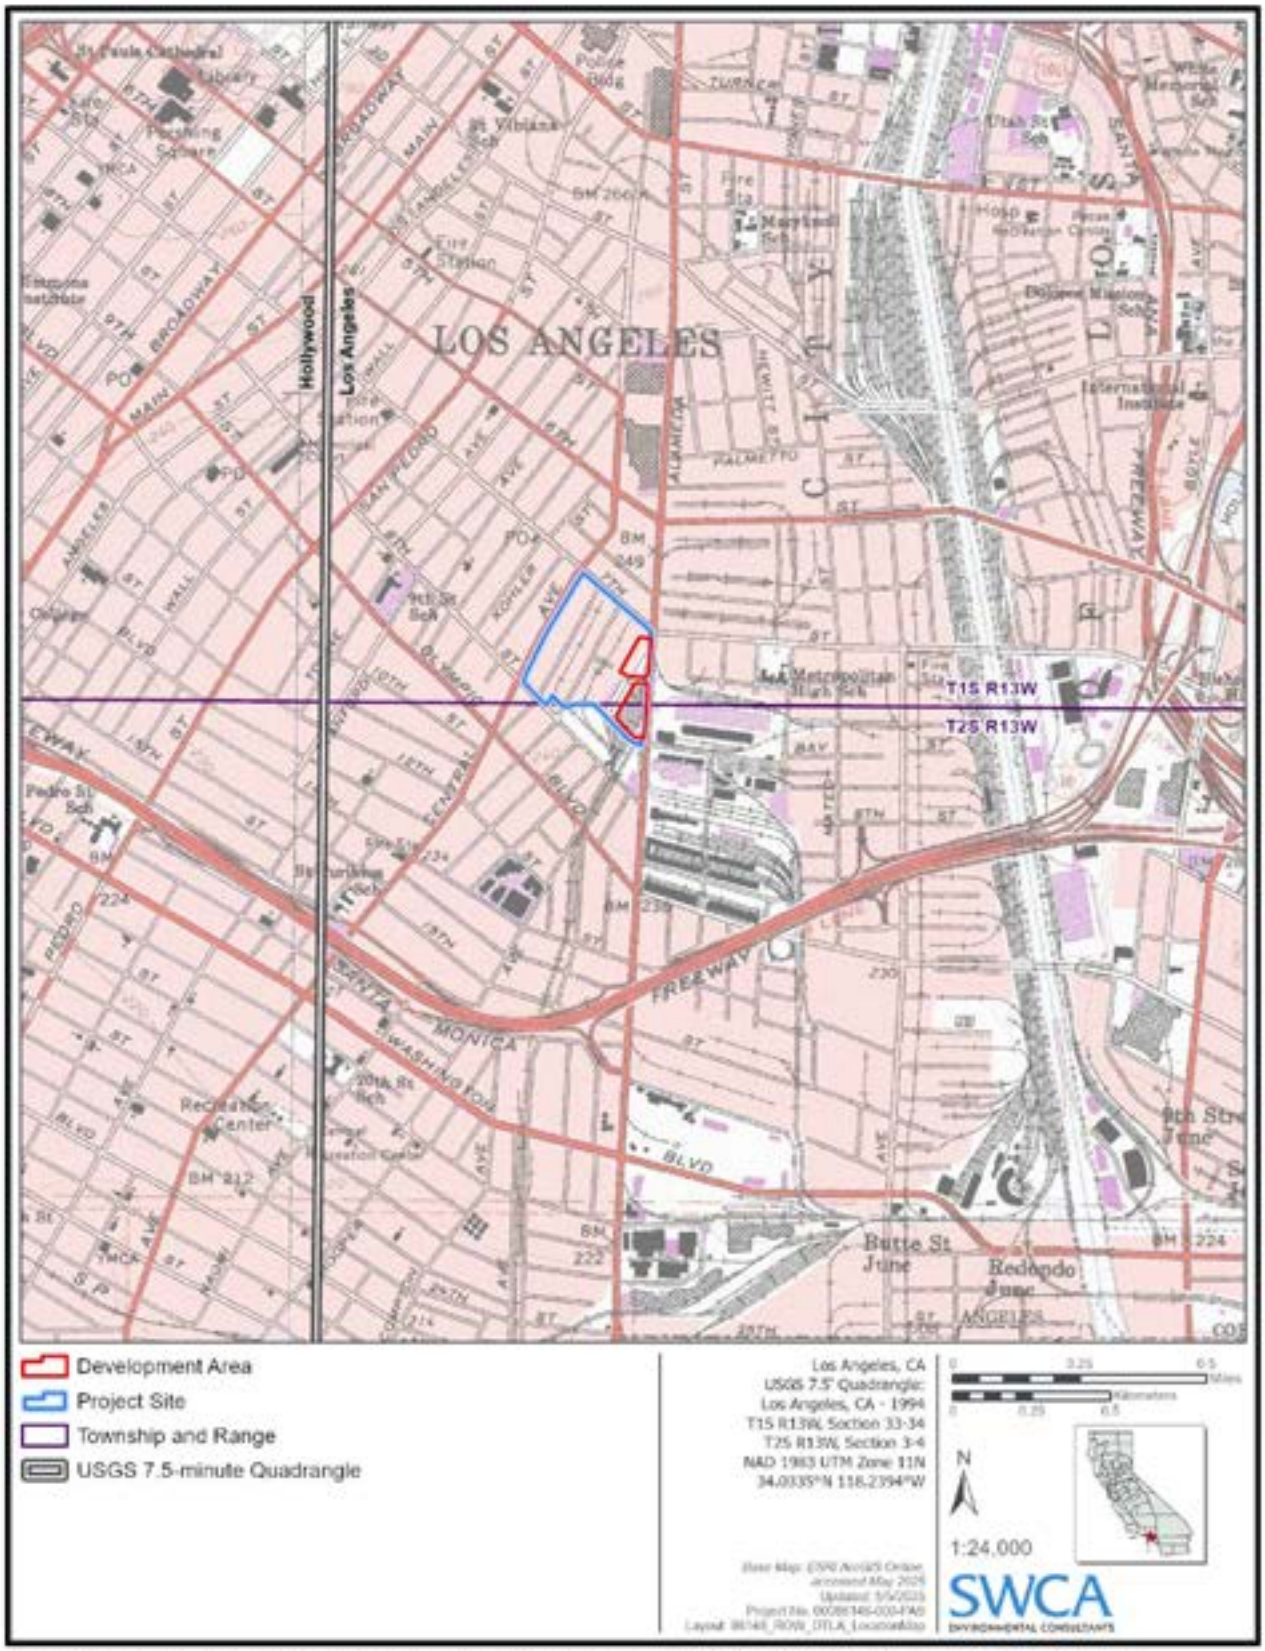

Figure 2. Project location plotted on USGS 7.5-minute quadrangle, Los Angeles, California.

Figure 3. Development Area (red outline) within the parcels that compose the Project Site (blue outlines) plotted on a 2021 aerial photograph.

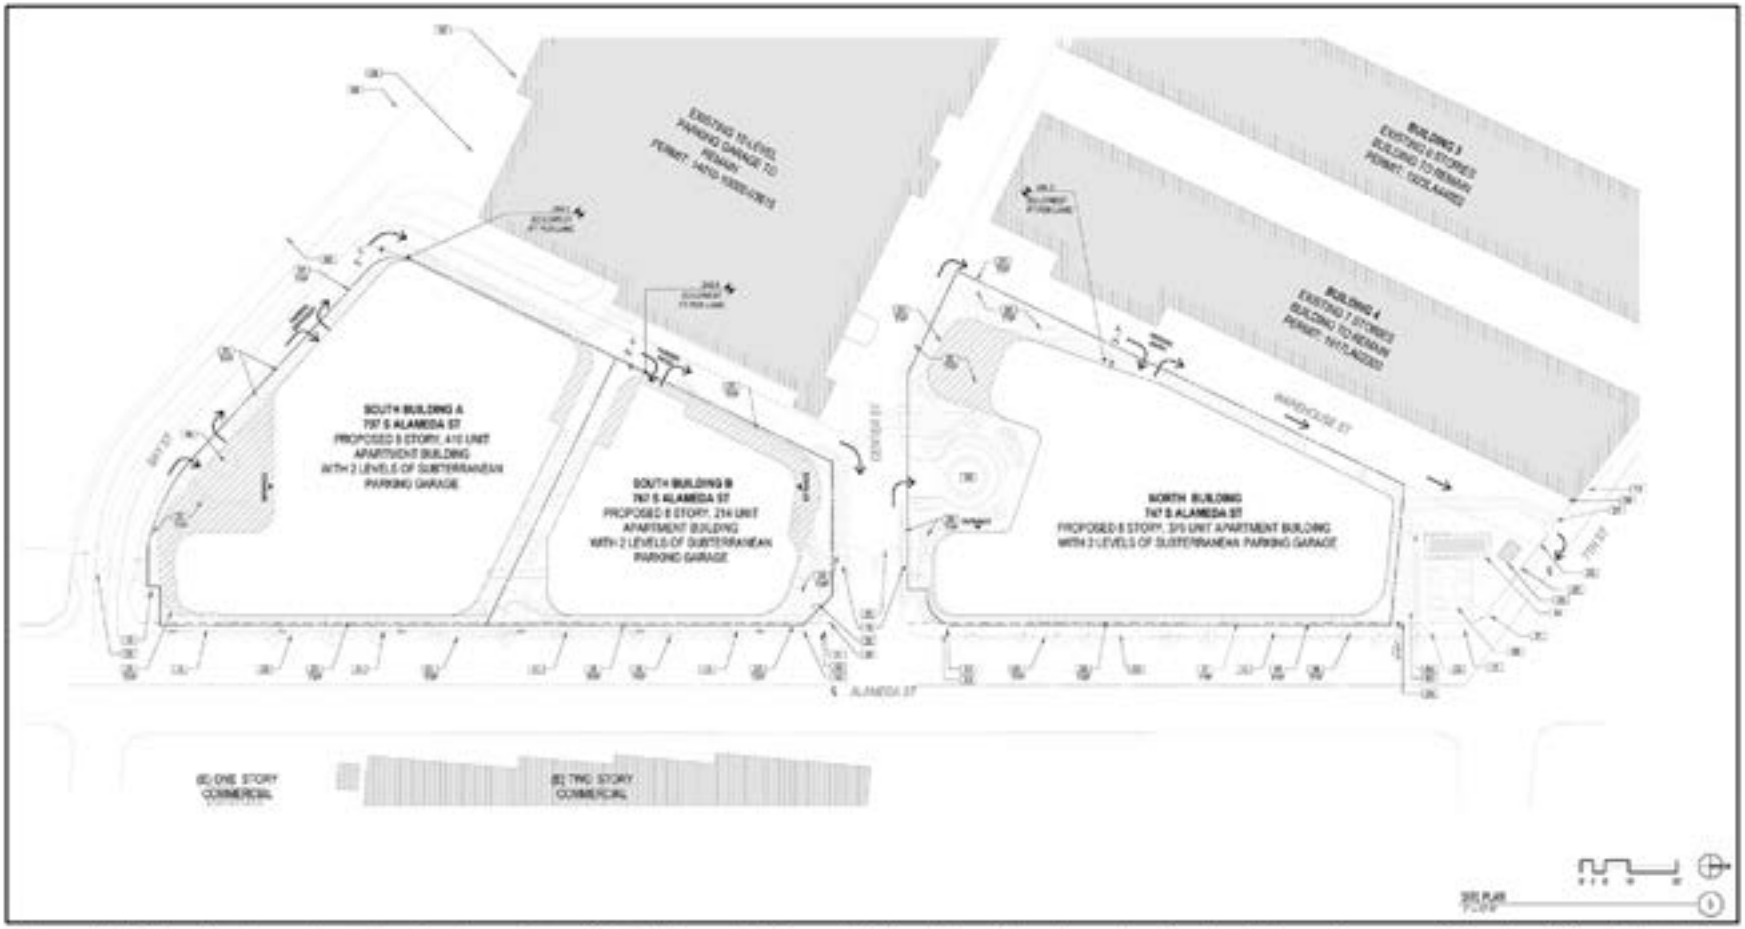

Figure 4. Project plans showing the location of Buildings A, B, and C (bold outlines) and extant buildings to remain in the Site (shaded). Note that north is to the right with Alameda Street along the bottom of the frame and Bay Street on the left.

REGULATORY SETTING

Paleontological resources are limited, nonrenewable resources of scientific and educational value and are afforded protection under state and local regulations.

State Regulations

California Environmental Quality Act

CEQA is the principal statute governing environmental review of projects occurring in the state and is codified at California Public Resources Code (PRC) Section 21000 et seq. CEQA requires lead agencies to determine whether a proposed project would have a significant effect on the environment, including significant effects on paleontological resources. Guidelines for the implementation of CEQA (Title 14, Chapter 3, California Code of Regulations 15000 et seq.) (*State CEQA Guidelines*), define procedures, types of activities, persons, and public agencies required to comply with CEQA. Section VII(f) of the Environmental Checklist (State CEQA Guidelines: Appendix G) asks whether a project would directly or indirectly destroy a unique paleontological resource and result in impacts to the environment.

Public Resources Code Section 5097.5

Requirements for paleontological resource management are included in PRC Division 5, Chapter 1.7, Section 5097.5, which states the following:

> No person shall knowingly and willfully excavate upon, or remove, destroy, injure or deface any historic or prehistoric ruins, burial grounds, archaeological or vertebrate paleontological site, including fossilized footprints, inscriptions made by human agency, or any other archaeological, paleontological or historical feature, situated on public lands, except with the express permission of the public agency having jurisdiction over such lands. Violation of this section is a misdemeanor.

This statute prohibits the removal, without permission, of any paleontological site or feature from land under the jurisdiction of the state or any city, county, district, authority, or public corporation, or any agency thereof. Consequently, local agencies are required to comply with PRC Section 5097.5 for their own activities, including construction and maintenance, as well as for permit actions (e.g., encroachment permits) undertaken by others.

Local Regulations

City of Los Angeles General Plan

CONSERVATION ELEMENT

Chapter II, Section 3 (Archaeological and Paleontological) of the *Conservation Element of the City of Los Angeles General Plan* (Conservation Element) recognizes paleontological resources (page II-3) and contains an objective (page II-5) to protect the City's archaeological and paleontological resources for historical, cultural, research, and/or educational purposes (DCP 2001). The Conservation Element includes the policy to "continue to identify and protect significant archaeological and paleontological sites and/or resources known to exist or that are identified during land development, demolition or property modification activities." The Conservation Element also states the following:

> Pursuant to CEQA, if a land development project is within a potentially significant paleontological area, the developer is required to contact a bona fide paleontologist to arrange for assessment of the potential impact and mitigation of potential disruption of or damage to the site. If significant paleontological resources are uncovered during project execution, authorities are to be notified and the designated paleontologist may order excavations stopped, within reasonable time limits, to enable assessment, removal or protection of the resources. (DCP 2001:II-5)

CITYWIDE HOUSING ELEMENT 2021–2029

The Housing Element of the City's General Plan identifies Los Angeles's housing needs and opportunities and establishes clear goals and objectives to inform future housing decisions. The Housing Element Update was adopted by the City Council on November 24, 2021 (DCP 2021c). An environmental review for the Housing Element Update was completed pursuant to CEQA in conjunction with the Safety Element Update and targeted updates Health Element. A Draft Environmental Impact Report (EIR) was prepared and after incorporating input received during public scoping meetings and circulation, a revised draft was released in October 2021 and approved by the City Planning Commission (CPC) (DCP 2021a).

The *Citywide Housing Element 2021–2029 and Safety Element Updates Final Environmental Impact Report* (Program EIR) (DCP 2021b) was adopted and certified on October 29, 2021. The Program EIR included an MMP, which describes the procedures for implementing the mitigation measures put forward in the Draft EIR. The mitigation measures are included as conditions of approval on future discretionary projects, subject to the City's authority.

Using CEQA Guidelines Section 15168, subsequent projects may use the Program EIR as their environmental clearance if the project can be shown to be within the scope of the program addressed in the Program EIR, and its environmental effects are within the scope of environmental impacts analyzed in the Program EIR. Most projects involving new housing within the City are within the scope of the Housing Element Program and can use the Housing Element CEQA Streamlining Checklist for environmental clearance. For those housing projects found not to be within the scope of the impacts analyzed in the Program EIR, the Program EIR can be used to clear those impacts that were analyzed in the EIR and a tiered clearance, such as a mitigated negative declaration or focused EIR, can be used to clear those impacts that are not within the scope of the Program EIR.

The mitigation measures/conditions of approval in the MMP for the Housing Element Update include the following provisions that apply to paleontological resources (DCP 2021b:5-30 through 5-33).

Paleontological Resources

4.5-1(a) Paleontological Procedures for Discretionary Projects

> For all discretionary projects that involve excavation or grading activities at depths greater than previous disturbance on the respective site(s), prior to the start of construction, the following shall be conducted as discussed in detail below: prepare a resource assessment and records search for the presence of paleontological resources to determine if the project site is underlain by paleontological resources; monitor all excavation and grading activities in areas underlain by soils or geologic units potentially containing paleontological resources; and identify, record, and evaluate all paleontological resources uncovered during project construction and submit a paleontological assessment report to the City for review and approval. In addition, during project construction, the following shall be conducted as discussed in detail below: cease all construction activities in the event of the discovery of paleontological resources;

conduct fossil recovery as necessary by a qualified paleontologist; avoid handling of paleontological resources by parties other than the qualified paleontologist responsible for conducting fossil recovery; and resume construction activities only upon clearance by the qualified paleontologist. These procedures, as detailed below, shall be implemented to avoid impacts to paleontological resources or reduce potential impacts to a less-than-significant level:

- Prior to excavation and grading activities, a qualified paleontologist shall prepare a resource assessment and records search for the potential presence of paleontological resources. This assessment shall be informed by records from the Natural History Museum of Los Angeles County.
- If the assessment determines the project site is underlain by soils or geologic units with a medium to high potential for containing paleontological resources, a qualified paleontologist shall prepare a monitoring plan, and worker education plan. The paleontologist's assessment and any required monitoring or required worker education plan shall be submitted to the City for review and approval prior to the commencement of construction activities. Any monitoring plan shall include requiring compliance with Mitigation Measure 4.5-1(d) for discovery, salvage and treatment.

4.5-1(b) Worker Environmental Awareness Program, Fossil Salvage, and Construction Monitoring

If required by ~~cultural~~ paleontological resources assessment under MM 4.5-1(a), prior to the start of construction, a paleontological monitor shall conduct training for construction personnel regarding the appearance of fossils and the procedures for notifying paleontological staff should fossils be discovered by construction staff, and notice that the identified qualified paleontologist is the only one authorized to handle paleontological find(s), including but not limited to collection and removal. Approved plans shall include [a] statement of WEAP requirement.

4.5-1(c) Construction Monitoring

If required pursuant to a monitoring plan prepared under MM 4.5-1(a), a paleontologist or designated paleontological monitor shall monitor ground disturbance activities, including the initial five feet below the ground surface, as areas with high paleontological sensitivity may contain resources at shallow depths and within the first five feet. If the paleontological monitor determines that full-time monitoring is no longer warranted, he or she may recommend that monitoring be reduced to periodic spot-checking or cease entirely. Monitoring shall be reinstated if any new or unforeseen deeper ground disturbances are required. After ground disturbing activities are completed, the paleontologist or designated monitor shall complete and submit a report to the City verifying compliance with the monitoring plan. Monitoring plan shall show on the plans.

4.5-1(d) Fossil Discovery, Salvage, and Treatment

All discretionary projects shall be subject to the following mitigation measure:

Discovery. If paleontological resources are uncovered during construction activities (in either a previously disturbed or undisturbed area), all ground-disturbing activities in the area of the find shall cease until a qualified paleontologist has evaluated the find, and identified and prepared an appropriate mitigation plan, in accordance with federal, state, and local guidelines, Construction activities in the area of the discovery shall commence again only after the identified resource(s) are properly processed by a qualified paleontologist, and if construction activities are cleared by the qualified paleontologist to continue. If cleared by the qualified paleontologist, construction activity may continue

unimpeded on other portions of the Project Site that would not affect evaluation or recovery of the identified resource(s).

Fossil Salvage and Treatment. The qualified paleontologist or designated paleontological monitor shall recover intact fossils consistent with the mitigation plan and notify the City of any fossil salvage and recovery efforts. Typically, fossils can be safely salvaged quickly by a single paleontologist and not disrupt construction activity. In some cases, larger fossils (such as complete skeletons or large mammal fossils) require more extensive excavation and longer salvage periods. In this case the paleontologist shall have the authority to temporarily direct, divert or halt construction activity to ensure that the fossil(s) can be removed in a safe and timely manner. Any fossils shall be handled and deposited consistent with a mitigation plan prepared by the paleontological monitor. The qualified paleontologist shall prepare a report according to current professional standards including those of the SVP that describes the resource, how it was assessed, and disposition. The report shall be submitted to the City.

The requirements in this mitigation measure shall be shown on plans.

PROFESSIONAL STANDARDS

The SVP has established standard guidelines that outline professional protocols and practices for conducting paleontological resource assessments and surveys; monitoring and mitigation; data and fossil recovery; sampling procedures; and specimen preparation, identification, analysis, and curation (SVP 2010). Most practicing professional mitigation paleontologists in California adhere closely to the SVP's assessment, mitigation, and monitoring requirements as specifically provided in its standard guidelines. Most state regulatory agencies with paleontological laws, ordinances, regulations, and standards accept and use the professional standards set forth by the SVP.

Scientific Significance

Numerous paleontological studies have developed criteria for the assessment of scientific significance for fossil discoveries (e.g., Eisentraut and Cooper 2002; Murphey et al. 2019; Scott and Springer 2003). In general, these studies assess fossils as significant if one or more of the following criteria apply:

1. The fossils provide information on the evolutionary relationships and developmental trends among organisms, living or extinct.
2. The fossils provide data useful in determining the age(s) of the rock unit or sedimentary stratum, including data important in determining the depositional history of the region and the timing of geologic events therein.
3. The fossils provide data regarding the development of biological communities or interaction between paleobotanical and paleozoological biotas.
4. The fossils demonstrate unusual or spectacular circumstances in the history of life.
5. The fossils are in short supply and/or are in danger of being depleted or destroyed by the elements, vandalism, or commercial exploitation and are not found in other geographic locations.

As defined by the SVP, scientifically significant paleontological resources are:

> fossils and fossiliferous deposits, here defined as consisting of identifiable vertebrate fossils, large or small, uncommon invertebrate, plant, and trace fossils, and other data that provide taphonomic, taxonomic, phylogenetic, paleoecologic, stratigraphic, and/or

> biochronologic information. Paleontological resources are considered to be older than recorded human history and/or older than middle Holocene (i.e., older than about [4,200 years ago (Cohen et al. 2023)]). (SVP 2010:11)

Geologic units known to preserve significant fossils or fossil localities are likely to contain additional undiscovered and potentially significant fossils and are generally considered sensitive for paleontological resources throughout their areal and stratigraphic extent.

Paleontological Sensitivity

Paleontological potential ("sensitivity") is defined as the potential for a geologic unit to produce scientifically significant fossils. This is determined by rock type, history of the geologic unit in producing significant fossils, and fossil localities recorded from that unit. Paleontological sensitivity is derived from the known fossil data collected from the entire geologic unit, not just from a specific survey. The sensitivity ranking provides the basis for determining which mitigation measures or recommendations, if any, are appropriate for a particular project.

In *Standard Procedures for the Assessment and Mitigation of Adverse Impacts to Paleontological Resources* (SVP 2010:1–2), the SVP defines four categories of paleontological sensitivity for rock units: high, low, undetermined, and no potential:

> **High Potential**. Rock units from which vertebrate or significant invertebrate, plant, or trace fossils have been recovered are considered to have a high potential for containing additional significant paleontological resources. Rocks units classified as having high potential for producing paleontological resources include, but are not limited to, sedimentary formations and some volcaniclastic formations (e.g., ash or tephra), and some low-grade metamorphic rocks which contain significant paleontological resources anywhere within their geographical extent, and sedimentary rock units temporally or lithologically suitable for the preservation of fossils (e.g., middle Holocene and older, fine-grained fluvial sandstone, argillaceous and carbonate-rich paleosols, cross-bedded point bar sandstone, fine-grained marine sandstone, etc.). Paleontological potential consists of both a) the potential for yielding abundant or significant vertebrate fossils or for yielding a few significant fossils, large or small, vertebrate, invertebrate, plant, or trace fossils and b) the importance of recovered evidence for new and significant taxonomic, phylogenetic, paleoecologic, taphonomic, biochronologic, or stratigraphic data. Rock units which contain potentially datable organic remains older than late Holocene, including deposits associated with animal nests or middens, and rock units which may contain new vertebrate deposits, traces, or trackways are also classified as having high potential.
>
> **Low Potential**. Reports in the paleontological literature or field surveys by a Qualified Professional Paleontologist may allow determination that some rock units have low potential for yielding significant fossils. Such rock units will be poorly represented by fossil specimens in institutional collections or based on general scientific consensus only preserve fossils in rare circumstances and the presence of fossils is the exception not the rule, e.g., basalt flows or recent colluvium. Rock units with low potential typically will not require impact mitigation measures to protect fossils.
>
> **Undetermined Potential**. Rock units for which little information is available concerning their paleontological content, geologic age, and depositional environment are considered to have undetermined potential. Further study is necessary to determine if these rock units have high or low potential to contain significant paleontological resources. A field survey by a Qualified Professional Paleontologist to specifically determine the paleontological resource potential of

these rock units is required before a paleontological resource impact mitigation program can be developed. In cases where no subsurface data are available, paleontological potential can sometimes be determined by strategically excavations into subsurface stratigraphy.

No Potential. Some rock units have no potential to contain significant paleontological resources, for instance high-grade metamorphic rocks (such as gneisses and schists) and plutonic igneous rocks (such as granites and diorites). Rock units with no potential require no protection or impact mitigation measures relative to paleontological resources. (SVP 2010:1 2)

METHODS

Literature Review

The literature review included an examination of geologic maps of the Development Area and vicinity and a review of relevant geological and paleontological literature to determine which geologic units are present in the Development Area, and whether fossils have been recovered from those geologic units elsewhere in the region. The geologic mapping used in this analysis is from Campbell et al. (2014) at a scale of 1:100,000. As geologic units may extend over large geographic areas and contain similar lithologies and fossils, the literature review includes areas beyond the Development Area. The results of this literature review include a discussion of the geology and paleontological sensitivity (or potential) of the geologic units in the Development Area.

Museum Records Search

The purpose of a museum records search is to establish the status and extent of previously recorded paleontological resources within and adjacent to the study area for a given project. This search provides another line of inquiry to assist in determining paleontological sensitivity of geologic units as not all information regarding fossil collections has been documented and published. Generally, this search is conducted through the closest, regional institution that would have collections and information relevant to a project. As this Project is in Los Angeles, the museum records search request was submitted to the NHMLA on February 2, 2024. The results were received on February 11, 2024, and incorporated into the results section of this report. Appendix A (confidential) provides a copy of the museum records search results letter.

RESULTS

Literature Review

Regional Geology

The Development Area, is located at the northern end of the Peninsular Ranges Geomorphic Province, a 900-mile (mi) long northwest-southeast trending structural block that extends from the Transverse Ranges in the north to the tip of Baja California in the south and includes the Los Angeles Basin (California Geological Survey 2002). This province is characterized by mountains and valleys that trend in a northwest-southeast direction, roughly parallel to the San Andreas Fault Zone (Norris and Webb 1990; Sharp 1976). Within this larger region, the Project is located in the Los Angeles Basin, a broad alluvial lowland bounded to the north and east by the San Gabriel and Santa Ana Mountains, respectively, and by

the Pacific Ocean to the southwest (Yerkes et al. 1965). The basin is underlain by a structural depression that has discontinuously accumulated thousands of feet of marine and terrestrial deposits since the Late Cretaceous (approximately 100.5 million years ago [Ma]) (Ingersoll and Rumelhart 1999; Lamar 1970; Yerkes et al. 1965). Over millions of years, the basin has experienced episodes of subsidence, deposition, uplift, erosion, and faulting, all of which have resulted in very complex geology, as well as a prolific oil deposits and abundant fossils (Bilodeau et al. 2007; Ingersoll and Rumelhart 1999; Lamar 1970; Yerkes et al. 1965). The surface of the basin slopes gently southwestward toward the ocean, interrupted in various places by low hills and traversed by several large rivers (Sharp 1976; Yerkes et al. 1965). Dates for the geologic periods and epochs used in this report are derived from the *International Chronostratigraphic Chart* prepared by the International Commission on Stratigraphy (Cohen et al. 2023).

Local Geology and Paleontology

According to geologic mapping by Campbell et al. (2014), the surface of the Development Area and much of the surrounding area contains Late Pleistocene (11,700–129,000 years ago) Young Alluvium, Unit 2 (Qya_2) (Figure 5). Further detail on the subsurface conditions was obtained through a geotechnical investigation of the Development Area conducted in 2023 by Group Delta, which involved drilling seven hollow-stem auger bores drilled 30 to 50 feet below grade, performing eight cone penetration tests, and completing an analysis of the results. The geotechnical investigation identified up to 5 feet of undocumented fill overlying naturally deposited sediments composed of sand and silt (Bueno and Tsai 2023). The units of artificial fill and Young Alluvium, Unit 2 are considered in terms of their paleontological sensitivity in the sections below.

ARTIFICIAL FILL

The geotechnical report prepared for the Project identified unmapped artificial fill across the Development Area from the surface to depths of up to 5 feet (Bueno and Tsai 2023). Artificial Fill typically consists of reworked and recompacted sediments from within a Development Area. Traces of brick were noted in several of the bores. The presence of the fill is consistent with nineteenth and twentieth century land uses. The artificial fill has likely replaced the uppermost sediments of the Young Alluvium, Unit 2 mapped by Campbell et al. (2014).

Artificial Fill may contain fossils, but as they have been removed from their original stratigraphic, taphonomic, or paleoenvironmental context (provenance), they are generally scientifically unimportant. Therefore, artificial fill is unlikely to yield significant paleontological resources and has no paleontological sensitivity.

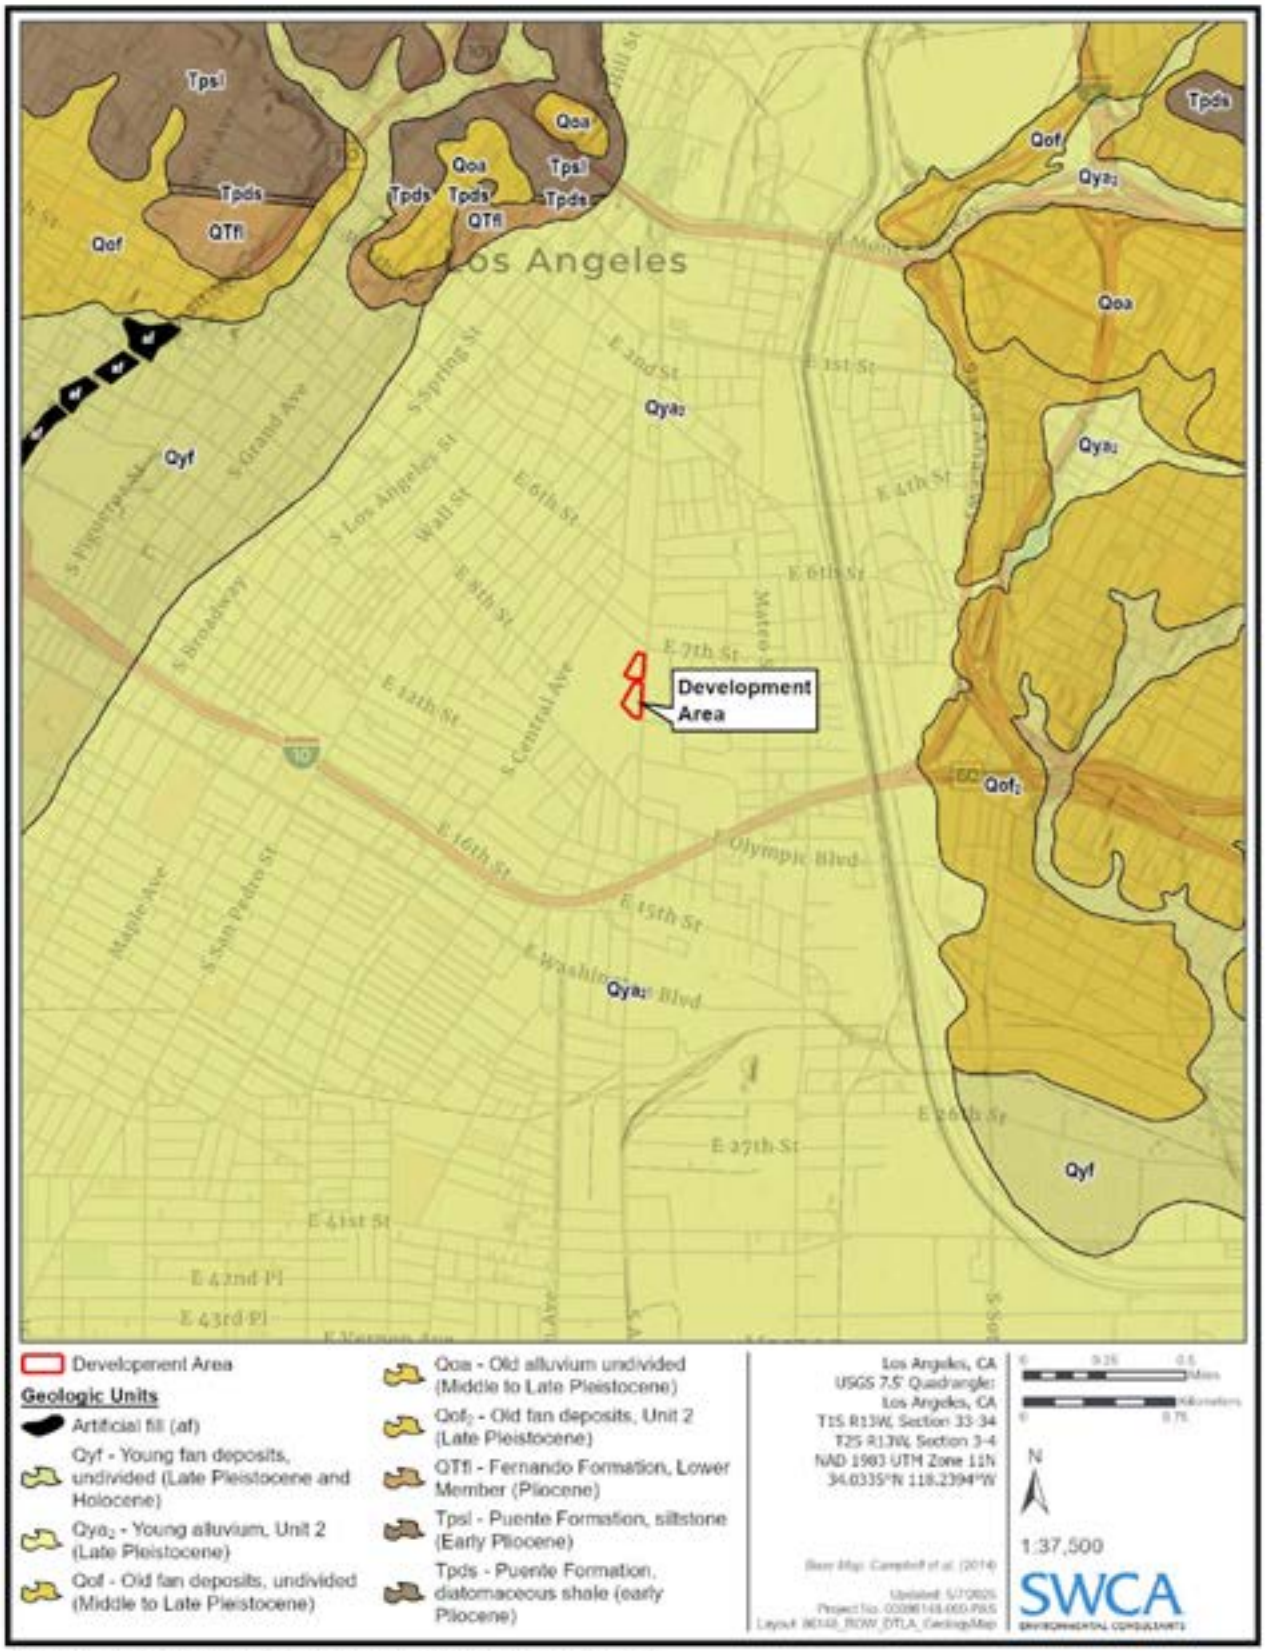

Figure 5. Geologic unit within the Development Area.

Pleistocene alluvial deposits have a rich fossil history in Southern California, especially in the Los Angeles Basin (Jefferson 1991a and 1991b; McDonald and Jefferson 2008; Miller 1971; Reynolds and Reynolds 1991; Springer et al. 2009). The most common Pleistocene terrestrial mammal fossils include the bones of mammoth, bison, deer, and small mammals, but other taxa, including horse, lion, cheetah, wolf, camel, antelope, peccary, mastodon, and giant ground sloth, have been reported (Graham and Lundelius 1994), as well as reptiles, snakes, frogs, and salamanders (Hudson and Brattstrom 1977). In addition to illuminating the striking differences between the Pleistocene and today in Southern California, this abundant fossil record has been vital in studies of extinction (e.g., Barnosky et al. 2004; Sandom et al. 2014; Scott 2010), ecology (e.g., Connin et al. 1998), and climate change (e.g., Roy et al. 1996). Therefore, Young Alluvium, Unit 2 is considered to have high paleontological sensitivity.

Museum Records Search

The NHMLA does not possess records of paleontological resources from within the Development Area; however, several fossil localities have been recorded in the vicinity of the Development Area from unnamed Pleistocene deposits at depths of 20 to 43 feet below grade, as well as from unknown depths. The NHMLA also noted fossil localities from the Fernando and Puente Formations; however, SWCA has no evidence to suggest these geologic units are present in the subsurface of the Development Area at depths that would be reached by Project activities. Therefore, those localities are not discussed further in this report. Table 1 summarizes the relevant results of the NHMLA museum records search.

Table 1. Natural History Museum of Los Angeles County Fossil Localities Near the Development Area

Locality Number	Approximate Distance from the Development Area	Formation	Taxa	Approximate Depth
LACM VP 1755	1 mile	unknown formation (Pleistocene)	horse (*Equus*)	43 feet
LACM VP 1023	2.5 miles	unknown formation (Pleistocene)	Saber-toothed cat (*Smilodon*), horse (*Equus*), deer (*Odocoileus*), turkey (*Meleagris*)	Unknown (excavations for storm drains)
LACM VP 2032	2.25 miles	unknown formation (Pleistocene)	Mastodon (*Mammut*)	20–35 feet

Source: NHMLA (2024)

LACM VP = Los Angeles County Museum Vertebrate Paleontology

IMPACT ANALYSIS

The Development Area contains artificial fill, which has no paleontological sensitivity, from the surface to depths of approximately 5 feet. The artificial fill is immediately underlain by alluvial deposits that have been mapped as late Pleistocene Young Alluvium, Unit 2, which has high paleontological sensitivity. These high sensitivity deposits are inferred to extend to at least 50 feet deep and possibly deeper within the Development Area based on NHMLA records of fossils recovered from Pleistocene deposits at 43 feet deep near the Development Area.

For this Project, ground disturbance would be required for the new buildings, subterranean parking garage, and landscaping. The average estimated depth of excavation to construct the two levels of subterranean parking beneath Buildings A-B and Building C is 20 feet below grade. The excavation to the respective depths would occur across the full extent of the Project Site in the two areas. Additional

excavation to a depth of approximately 28 feet below-grade would be conducted under the elevator pit and associated footings. Ground-disturbing activities associated with the Project that extend beneath the artificial fill (i.e., are greater than 5 feet deep) may reach geologic units of high paleontological sensitivity and have the potential to impact scientifically significant paleontological resources.

RECOMMENDATIONS

SWCA recommends implementation of Mitigation Measures 4.5-1(b), 4.5-1(c), and 4.5-1(d) as described in the Program EIR MMP and quoted in the Regulatory Environment section of this report. These conditions require administering a training to workers, monitoring by a qualified specialist during ground-disturbing activities within paleontologically sensitive areas, and ensuring appropriate treatment of fossils discovered during the Project. These measures would be sufficient to reduce Project impacts to scientifically significant paleontological resources to a less than significant level.

SWCA notes that in the version of Mitigation Measure 4.5-1(b) cited herein incorporates one minor correction to clarify that it is the paleontological resources assessment being referenced and not a cultural resources assessment.

SWCA Environmental Consultants
Attn: Sarah Rieboldt

re: Paleontological resources for the ROW DTLA Project (SWCA Project No. 86148)

Dear Sarah:

I have conducted a thorough search of our paleontology collection records for the locality and specimen data for proposed development at the ROW DTLA Project area as outlined on the portion of the Los Angeles USGS topographic quadrangle map that you sent to me via e-mail on February 2, 2024. We do not have any fossil localities that lie directly within the proposed project area, but we do have fossil localities nearby from the same sedimentary deposits that may occur in the proposed project area, either at the surface or at depth.

The following table shows the closest known localities in the collection of the Natural History Museum of Los Angeles County (NHMLA).

Locality Number	Location	Formation	Taxa	Depth
LACM VP 1755	Near 12th & Hill Sts	Unknown Formation (Pleistocene)	Horse (*Equus*)	43 feet bgs
LACM IP, 17 localities	Area bound by 7th St., Spring St., 3rd St., and Flower St.	Fernando Formation	Invertebrates, including *Crepidula princeps* and *C. grandis*; *Haliotis*; Mitraidae; and others	Localities with recorded depths range from 30 – 80 feet bgs
LACM VP 7990	Hall of Justice building	Puente Formation, Yorba Member (claystone; siltstone & sandstone layers)	Teleostei (viperfish [*Chauliodus*], cod [Gadiformes], herring/shad/sardines [Clupeidae], mackerel/tuna/bonito [Scombridae], slickheads [Alepocephalidae], smelts [Bathylagidae], herring smelt [Argentinidae], scaly dragonfish [Stomiatidae], bristlemouths [Gonostomidae])	Unknown depth (fossil layers at 257-321 ft above mean sea level)
LACM VP 5961	Just north of the intersection of 1st & Hill Streets, downtown LA	Puente Formation	Bristlemouth (*Cyclothone*)	Unknown (collected during Metrorail excavations)
LACM VP 1023	Workman & Alhambra Sts	Unknown Formation (Pleistocene)	Sabertooth cat (*Smilodon*), horse (*Equus*), deer (*Odocoileus*), Turkey	Unknown (excavations

Locality Number	Location	Formation	Taxa	Depth
			(*Meleagris*)	for storm drains)
LACM VP 2032	Los Angeles Brickyard Mission Rd. & Daly St.	Unknown Formation (Pleistocene, silt & clay)	Mastodon (*Mammut*)	20-35 feet bgs

VP, Vertebrate Paleontology; IP, Invertebrate Paleontology; bgs, below ground surface

This records search covers only the records of the NHMLA. It is not intended as a paleontological assessment of the project area for the purposes of CEQA or NEPA. Potentially fossil-bearing units are present in the project area, either at the surface or in the subsurface. As such, NHMLA recommends that a full paleontological assessment of the project area be conducted by a paleontologist meeting Bureau of Land Management or Society of Vertebrate Paleontology standards.

Sincerely,

Alyssa Bell

IV. Previous Environmental Reports

1.0 EXECUTIVE SUMMARY

An Environmental Site Assessment - Phase I was prepared for the subject property located at 777 S. Alameda Street, Los Angeles, California 90021. The scope of work for this Phase I report conforms to the procedures outlined in the ASTM E 1527-21 *Standard Practice for Environmental Site Assessments*. The purpose of the Phase I report is to provide information regarding the potential for hazardous material impacts to the soil and groundwater beneath the subject property. Such threats or material threats are identified in this report as Recognized Environmental Conditions (RECs). The presence of Historical Recognized Environmental Conditions (HRECs) and Controlled Recognized Environmental Conditions (CRECs) was also evaluated. The extent of this evaluation in conjunction with owner/client-supplied data is intended to satisfy the requirements of all appropriate inquiry into the previous ownership and uses of the property. The scope of the work included a site reconnaissance, research of land use records and other sources for preliminary indications of hazardous material use, storage, or disposal at the property and/or on contiguous parcels. Redevelopment of the property with several multi-unit residential structures including one level of subterranean parking is proposed.

The subject property is located on the west side of South Alameda Street between 7th Street and Bay Street, in the City of Los Angeles, California. The current street addresses for the property are 1390 & 1396 E 7th Street and 777 S. Alameda Street. The 777 S. Alameda Street address is associated with the entire ROW DTLA mall property that extends to the west. According to the Los Angeles County Tax Assessor's office, the Assessor's Parcel Number (APN) for the subject property is a portion of APN 5146-009-008.

The subject property consists of approximately 10 acres of land on the east side of one (1) 20-acre irregular-shaped parcel. The subject property is associated with the ROW DTLA mall, which is located on the remainder of the parcel to the west. The subject property is currently developed with two (2) asphalt-paved parking lots that are bisected by Center Street. The south parking lot was constructed in approximately 1980 and the north parking lot was constructed in approximately 1989. Access to the property is via S Alameda Street to the east.

Historical site utilization research indicates that the subject property was developed with a portion of the Pacific Electric Co. railway yard in the early 1900s. In 1906 this included railroad tracks and buildings used for railway car construction on the south portion of the subject property and a machine shop, blacksmith, and oil house on the north portion of the subject property. By 1950, the electrical construction buildings and oil house had been removed. The structure formerly utilized as a machine shop and blacksmith had been transitioned to a warehouse. The railroad tracks were removed and the existing parking lot was constructed on the south parcel by 1983. The structure on the north parcel was removed and the existing parking lot was constructed on the north parcel by 1989.

Phase I Environmental Site Assessments were conducted for the entire ROW DTLA mall, including the subject property, in 1997, 2004, and 2013. All three reports identified the historical industrial operations associated with the former railroad yard on the subject property as a REC. All three reports recommended implementing subsurface sampling to assess for potential contamination.

Hazardous Materials Consulting (HMC) implemented soil and soil as sampling on the subject property in 2013. The assessment work included a total of 23 soil borings across the entire ROW DTLA property. Of the 23 borings, eight (8) were located on the subject property. The borings on the subject property targeted the former machine shop and oil house located previously located on the north portion of the property, the electrical

construction shop on the south portion of the subject property, and general site screening across the north and south parking lots. In each location one (1) soil gas sample was collected from 5 ft bgs and in five (5) locations one (1) 5 ft co-located soil sample was collected. Soil samples were analyzed for hydrocarbons, VOCs, metals, PAHs, and PCBs dependent on sample location. Soil gas samples were analyzed for VOCs.

All soil gas sample locations on the north portion of the subject property were non-detect for VOCs. One (1) soil sample collected in the area of the former machine shop on the north portion of the property detected lead at 500 mg/kg, above the current DTSC SL for lead in soil at a residential property (80 mg/kg). All other soil samples were below the applicable DTSC SLs for a residential property.

Three (3) soil gas samples in the southern parking lot contained PCE at concentrations ranging from 120 ug/m^3 to 1,600 ug/m^3, which exceeds the current DTSC SL for PCE in soil gas at a residential property (460 ug/m^3). One (1) of the soil gas samples contained a concentration of benzene (120 ug/m^3) that exceeds the current DTSC SL for benzene in soil gas a residential property (97 ug/m^3). Only one (1) of the four (4) soil gas sample locations with exceedances on the southern portion of the subject property had a co-located soil sample. The one (1) co-located soil sample was non-detect for hydrocarbons and VOCs. The soil gas exceedances of PCE and benzene on the south portion of the subject property, and soil exceedance of lead on the north portion of the subject property, are considered a REC.

The subject property address is identified on the standard environmental government sources researched in this report. The property is listed on the NPDES, CIWQS, and HWTS databases. These listings are likely associated with previous development activities that have occurred at the ROW DTLA shopping mall. They are not considered an environmental concern for the subject property.

The nearest listed contaminated site to the subject property is the Texaco Truck Stop (Former) (T0603700645) located directly across E 7th Street to the north. The offsite property is a closed LUST cleanup site. The site previously consisted of truck maintenance facilities, 10 USTs, and multiple fuel dispensers. Between 1992 and 1997, several rounds of soil and groundwater assessment were implemented. The highest concentrations of soil and groundwater contamination was identified on the west side of the property (approximately 430 feet northwest of the subject property) associated with several fuel USTs. Initial sampling in 1992 detected high concentrations of hydrocarbons and BTEX compounds. Soil samples collected in 1995 showed a significant decline in BTEX compounds with benzene at 2.6 mg/kg, toluene at 180 mg/kg, ethylbenzene at 120 mg/kg, and xylenes at 690 mg/kg. Groundwater sampling was only conducted in 1995, and detected TPHg up to 89,000 ug/L, benzene up to 9,200 ug/L, toluene up to 7,400 ug/L, ethylbenzene up to 3,200 ug/L, and xylenes up to 180,000 ug/L. The groundwater was collected from a perched aquifer at approximately 80 feet bgs. Groundwater sampling was attempted in 1996 and 1997, but groundwater was not present in any of the wells. All onsite USTs were removed from the property in 1994. The LARWQCB granted the site "case closed" status as a Low Risk Groundwater Site on March 6, 1998. A sample collected during HMC's 2013 subsurface assessment from between the north portion of the subject property and this offsite release did not detect any VOCs in soil or soil gas to a depth of 5 feet bgs. Therefore, it is considered unlikely that contaminated groundwater or soil gas from this offsite release is impacting the subject property.

California Environmental has prepared an Environmental Site Assessment - Phase I in conformance with the scope and limitations of ASTM 1527-21 for the property located at 777 S Alameda Street, Los Angeles, California. The lack of records prior to (1896) site development is a data gap not constituting a data failure since such

information is unlikely to be useful in evaluating the environmental condition of the site. Review of recorded Land Title Records including environmental liens was excluded from this report. These records should be obtained and reviewed by the user.

Throughout the 1900s, the subject property was utilized as a railway yard that included a variety of industrial operations. The former onsite industrial operations (machine shop, blast furnace, and oil storage) are considered a REC. A 2013 subsurface assessment identified concentrations of PCE and benzene in soil gas and lead in soil that exceed current regulatory screening levels for a residential property. This is considered a REC. No evidence of historical recognized environmental conditions (HREC) or controlled recognized environmental conditions (CRECs) were identified in connection with the subject property. The previous 2013 assessment on the subject property consisted of soil gas sampling at only 5 feet bgs with sporadic co-located soil sampling and analysis. Based on the future development plans for residential structures including one level of subterranean parking, CE recommends implementing an updated soil and soil gas assessment. Soil characterization samples should be collected from near surface soil to a depth of approximately 5 feet below the proposed final grade of the subterranean basement. The soil data can be utilized to develop a profile for future offsite soil disposal and to assess the extent of lead in soil that exceeds the residential screening concentration of 80 mg/Kg. Additionally, soil gas samples should be collected from approximately 5 and 15 feet below the proposed final grade of the subterranean basement to assess vapor intrusion potential for the proposed structure.

2.0 INTRODUCTION

The following report presents the findings of the Environmental Site Assessment - Phase I prepared for the subject property located at 777 S. Alameda Street, Los Angeles California 90021. The scope of the Phase I study meets ASTM E 1527-21 *Standard Practice for Environmental Site Assessments* and included research of available land use records and other sources for preliminary indications of hazardous material use, storage or disposal at the property. The findings of this study are intended to provide information to the client regarding potential hazardous material impacts to the soil and groundwater beneath the site.

The scope of the investigation was conducted in general accordance with ASTM Standard Practice for Environmental Site Assessments – Phase I, Environmental Site Assessment Process ASTM E 1527-21. The steps outlined in this process are intended to permit a user (client) to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide purchaser limitations on CERCLA liability. Specifically, this report along with certain obligations of the client, constitutes All Appropriate Inquiry (AAI) into the previous ownership and uses of the property consistent with the standard of care as practiced in this area by environmental professionals. A main component of the assessment is to identify recognized environmental conditions, controlled recognized environmental conditions, and historical recognized environmental conditions, as they may affect the subject property. As defined by ASTM E 1527-21, a recognized environmental condition (REC) means *"(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment."* A controlled recognized environmental condition (C-REC) is defined *as "recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or*

other property use limitations)." An historical recognized environmental condition (HREC) is defined as *"a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations)."*

An important component of complying with the ASTM E 1527-21 Standard is information to be obtained or in the possession of the client and/or seller of the property. Such information includes obtaining and review of a recent title report, any specialized information regarding the site or surrounding area which may give rise to identification of a recognized environmental condition, and/or reasons given by the seller should the purchase price be significantly lower than what would be reasonably expected for a property of similar size and value. Often a real estate appraiser is commissioned to evaluate the purchase or sale price of a property. Such an appraisal is outside the scope of this Phase I Assessment report.

The independent conclusions represent California Environmental's (CE) professional judgment based on the conditions that existed and the information and data available during the course of the study. Factual information regarding operations, conditions, and test data provided by the client, the owner or their representatives have been assumed to be correct and complete. This report includes **CONCLUSIONS AND RECOMMENDATIONS**, which together with the remainder of this report are subject to the **NOTICE** at the end of the report. **This report was prepared for the sole use and reliance by the client as identified on the title page of this report. Use of this report by other entities is expressly forbidden unless the client and CE grant permission.**

The scope of work included:

- A walkover of the site.
- Review of client/owner supplied information.

- Review of building and grading permits on file with the City of Los Angeles Department of Building and Safety.
- A review of underground storage tank files and industrial waste records maintained by the City of Los Angeles Fire Department Underground Storage Tank and Hazardous Materials Divisions.
- Review of historical USGS topographic maps and historical aerial photographs maintained by EDR Company.
- Research of historical Sanborn Fire Insurance Maps maintained by EDR Company.
- Contact with the California Environmental Protection Agency, Department of Toxic Substances Control to review their files.
- Contact with the California Environmental Protection Agency, Regional Water Quality Control Board to review their files.
- Contact with the Los Angeles County Fire Department to review their files.
- Contact with the South Coast Air Quality Management District to review their files.
- Review of oil well records maintained by the Geologic Energy Management Division.
- Review of the City of Los Angeles – Zone Information and Map Access System (ZIMAS) database.
- Review of the California Integrated Waste Management Board - Solid Waste Information System (SWIS) database
- Review of the following lists and maps of suspect or known contaminated sites; a complete listing of these sources is contained within **APPENDIX III**.
    - California Regional Water Quality Control Board, (RWQCB) - *Computer Case Listing of Reported Underground Tank Leaks*, covering Los Angeles County.
    - California Department of Health Services - *Hazardous Waste and Substance Sites - Cortese List and Contaminated Wells List, which includes the Bond Expenditure Plan* (BEP) sites.
    - California Environmental Protection Agency, Facility and Manifest Data, HAZNET.
    - Historical California Environmental Protection Agency, Department of Toxic Substances Control - *CalSites List*.
    - California Department of Health Services, *Hazardous Waste Information System* (HWIS) and Tanner Report.
    - California Integrated Waste Management Board, *Solid Waste Information System* - (SWIS) List.

- State Water Resources Control Board, *Toxic Pits Clean-up Act (Toxic Pits).*
- State Water Resources Control Board, *Hazardous Substance Storage Container Database* (UST, LUST, SLIC, and WDS).
- U.S. Environmental Protection Agency - *National Priorities List* (NPL).
- U.S. Environmental Protection Agency - *Comprehensive Environmental Response, Compensation, and Liability Information System* (CERCLIS).
- U.S. Environmental Protection Agency, *Toxic Release Inventory System* (TRIS).
- U.S. Environmental Protection Agency, *Resource Conservation and Recovery Information, System Treatment, Storage and Disposal Facilities*, (RCRA-TSDF).
- U.S. Environmental Protection Agency, *Resource Conservation and Recovery Information System, Large Quantity Generators*, (RCRA-LQG).
- U.S. Environmental Protection Agency, Resource *Conservation and Recovery Information System, Small Quantity Generators*, (RCRA-SQG).
- U.S. Environmental Protection Agency - *Superfund Amendment and Reauthorization Act, Title III*, (SARA Title III).
- U.S. Environmental Protection Agency, *Emergency Response Notification System* (ERNS).
- U.S. Environmental Protection Agency, *Facility Index System* (FINDS).
- U.S. Environmental Protection Agency, *Civil Enforcement Docket* (DOCKET).

- A review of government records databases of suspect or known contaminated sites and historical city directories research was performed by EDR Company. The results of the search are summarized in this report. The EDR reports are enclosed in **APPENDICES II** and **III**.
- Review of previous environmental reports.
- Preparation of this report.

3.0 SITE DESCRIPTION

3.1 LOCATION AND LEGAL DESCRIPTION

The subject property is located on the west side of South Alameda Street between 7th Street and Bay Street, in the City of Los Angeles, California, see **FIGURE 1 - VICINITY MAP**. The current street addresses for the property are 1390 & 1396 E 7th Street and 777 S Alameda Street. The 777 S Alameda Street address is associated with the entire ROW DTLA shopping mall property adjacent to the west. According to the Los Angeles County Tax Assessor's office, the Assessor's Parcel Number (APN) for the subject property is a portion of 5146-009-008.

3.2 DESCRIPTION OF PROPERTY / PROPOSED PROJECT

The subject property consists of approximately 10 acres of land on the east side of one (1) 20-acre irregular-shaped parcel. The subject property is associated with the ROW DTLA shopping center, which is located on the remainder of the parcel to the west. The subject property is currently developed with two (2) asphalt-paved parking lots that are bisected by Center Street. The south parking lot was constructed in approximately 1980 and the north parking lot was constructed in approximately 1989. Access to the property is via S Alameda Street to the east. It is proposed to redevelop the subject property with several multi-unit residential structures that include one level of subterranean parking.

3.3 GEOLOGY AND HYDROGEOLOGY

The subject property is located within the northern portion of the Los Angeles Coastal Plain on the west ancestral bank of the Los Angeles River. The Downey Plain feature is a result of coalesced alluvial fans deposited by the Los Angeles River and Rio Hondo Rivers. Surface sediments at the subject

property are Quaternary age and composed of silty to sandy gravel, sand and silt soil types. The Miocene-age Puente formation underlies the unconsolidated Quaternary-age sediments. The Puente Formation is predominantly composed of marine-deposited siltstone, sandstone, and shale. The subject property is located within the Los Angeles Forebay area of the Central Groundwater Basin. The Central Basin occupies a large portion of the southeastern part of the Coastal Plain of Los Angeles Groundwater Basin. The Los Angeles Forebay occupies the northwesterly portion of the Central Basin Non-Pressure Area.

Groundwater level data was obtained from the RWQCB GeoTracker database for the nearby 1910 Bay Street (T1000011015) site located approximately 1,200 feet east of the subject property. Records indicate that in November 2022 groundwater was measured at 117 to 138 feet bgs with a southwest direction of flow.

4.0 BACKGROUND INFORMATION

4.1 PREVIOUS WORK

Mclaren Hart (MH) – *Phase I Environmental Site Assessment, Rykoff Terminal & Warehouses, 709-761 Terminal Street & 1388 East 7th Street, Los Angeles, California 90021*, dated May 1, 1997. MH prepared a Phase I ESA report for the entire ROW DTLA shopping mall, which includes the subject property. The report was prepared pursuant to the ASTM 1527-1994 Standard for Phase I Environmental Assessments. HM identified one REC for the subject property. The subject property was historically developed with railroad tracks, which are often associated with soil contamination due to material spills during loading/unloading or leaks leading to hydrocarbon contamination. HM recommended conducting soil borings across the property to assess for potential contamination.

AEI Consultants (AEI), *Phase I Environmental Site Assessment, 761 Terminal Street, Los Angeles, California 90021*, dated June 25, 2004. AEI prepared a Phase I ESA report for the entire ROW DTLA

shopping mall, which includes the subject property. The report was prepared pursuant to the ASTM 1527-2000 Standard for Phase I Environmental Assessments. AEI identified several RECs associated with the subject property. The Pacific Electric Railroad Company's operations on the subject property included a machine shop/blacksmith, oil house (which likely contained several AST/USTs), woodworking shop, and electrical construction facility. During the site reconnaissance a drum of PCE was observed on the first floor of the building that borders the northwest portion of the subject property. Historically, several tenants that likely used solvents, hydrocarbons, and heavy metals were located on the property adjacent to the west. AEI concluded that soil and groundwater testing would be required to confirm the absence or presence of subsurface contamination.

Hazardous Management Consulting (HMC), *Phase I Environmental Site Assessment, Alameda Square, Los Angeles, California*, dated February 6, 2013. HMC prepared a Phase I ESA report for the entire ROW DTLA shopping mall, which includes the subject property. The report was prepared pursuant to the ASTM 1527-2005 Standard for Phase I Environmental Assessments. HMC identified the historic presence of the Pacific Electric Railway's maintenance operations on the subject property as a REC. HMC noted the operations most likely included the use of fuels, hydrocarbons, solvents, metals and potentially, PCBs. HMC concluded that a subsurface investigation should be conducted to assess the presence of hydrocarbons and solvents in soil gas as well as metals and PCBs that could be present in soil.

HMC, *Results of Soil and Soil Gas Sampling, 777 Sauth Alameda Street, Las Angeles, Califarnia*, dated February 14, 2013. The assessment work included a total of 23 soil borings across the entire ROW DTLA property. Of the 23 borings, nine (9) were located on the subject property. The borings on the subject property targeted the former machine shop and oil house located previously located on the north portion of the property, the electrical construction shop on the south portion of the subject property, and general site screening across the north and south parking lots. In each location one (1) soil gas sample was collected from 5 ft bgs and in five (5) locations one (1) 5 ft co-located soil sample was collected. Soil samples were analyzed for hydrocarbons, VOCs, metals, PAHs, and PCBs dependent on sample location. Soil gas samples were analyzed for VOCs.

All soil gas sample locations on the north portion of the subject property were non-detect for VOCs. One (1) soil sample collected in the area of the former machine shop on the north portion of the property detected lead at 500 mg/kg, above the current DTSC SL for lead in soil at a residential property (80 mg/kg). All other soil samples were below the applicable DTSC SLs for a residential property.

Three (3) soil gas samples in the southern parking lot contained PCE at concentrations ranging from 120 ug/m3 to 1,600 ug/m3, which exceeds the current DTSC SL for PCE in soil gas at a residential property (460 ug/m3). One (1) of the soil gas samples contained a concentration of benzene (120 ug/m3) that exceeds the current DTSC SL for benzene in soil gas a residential property (97 ug/m3). Only one (1) of the four (4) soil gas sample locations with exceedances on the southern portion of the subject property had a co-located soil sample. The one (1) co-located soil sample was non-detect for hydrocarbons and VOCs. The soil gas exceedances of PCE and benzene on the south portion of the subject property, and soil exceedance of lead on the north portion of the subject property, are considered a REC. HMC's 2013 subsurface assessment is attached in **APPENDIX IV**.

CBRE, *Phase I Environmental Site Assessment, LA Industrial Portfolio, 747-787 S. Alameda Street, 746 S Central Avenue, 1318-1320 E. 7th Street, 1215 E 7th Street, Los Angeles, California*, 90021, dated April 5, 2017. CBRE prepared a Phase I ESA report for the entire ROW DTLA shopping mall, which includes the subject property. The report was prepared pursuant to the ASTM 1527-2013 Standard for Phase I Environmental Assessments. CBRE did not identify any RECs, HRECs, or CRECs in connection with the subject property

4.2 SITE UTILIZATION HISTORY

4.2.1 Historical City Directories

EDR Company was contacted to research historical city directories for the subject property and adjacent sites. The city directories were reviewed at approximately five-year intervals spanning from 1920-2020. A summary of city directories reviewed for the subject property is included in **TABLE I**. The EDR City Directory is attached in **APPENDIX II**.

TABLE I
Historical City Directories

Year	Use/User	Source
777 S. Alameda Street		
All listings associated with the ROW DTLA shopping mall on the offsite portion of the subject property parcel.		
1390 & 1396 E. 7th Street		
No Listings		

4.2.2 Historical Aerial Photographs

Historical aerial photographs were reviewed as part of this study. The photographs are part of the aerial photograph collection maintained by the EDR Company. Seventeen (17) photographs were reviewed for the subject property. The photographs are summarized below in **TABLE II**. The aerial photographs are attached in **APPENDIX II** of this report.

TABLE II
Historical Aerial Photographs

Date	Source	Description
1923	FAIR	The subject property appears developed with a railway yard. The south portion of the subject property consists of rail lines and the north portion of the subject property is a large industrial structure. The railway yard extends offsite to the west and includes the existing warehouse structures that are part of the ROW DTLA shopping mall. The surrounding area is densely developed with industrial structures.
1928	FAIR	The subject property and surrounding area appear similar to the previous aerial photograph.
1938	USDA	The subject property and surrounding area appear similar to the previous aerial photograph.
1948	USGS	The subject property and surrounding area appear similar to the previous aerial photograph.
1952	USDA	The subject property and surrounding area appear similar to the previous aerial photograph.
1964	USGS	The subject property and surrounding area appear similar to the previous aerial photograph.
1970	EDR	The subject property and surrounding area appear similar to the previous aerial photograph.
1972	EDR	The subject property and surrounding area appear similar to the previous aerial photograph.
1983	EDR	The south portion of the subject property is redeveloped with a parking lot. The north portion of the subject property is occupied by a large industrial structure. The surrounding area appears similar to the previous aerial photograph.
1989	USDA	The industrial structure previously on the north portion of the subject property has been removed. The south portion of the subject property and surrounding area appear similar to the previous aerial photograph.
1994	USGS/DOQQ	The subject property and surrounding area appear similar to the previous aerial photograph.

TABLE II
Historical Aerial Photographs – Continued

Date	Source	Description
2002	USDA	The north portion of the subject property is redeveloped with a parking lot. The south portion of the subject property and surrounding area appear similar to the previous aerial photograph.
2005	USDA/NAIP	The subject property and surrounding area appear similar to the previous aerial photograph.
2009	USDA/NAIP	The subject property and surrounding area appear similar to the previous aerial photograph.
2012	USDA/NAIP	The subject property and surrounding area appear similar to the previous aerial photograph.
2016	USDA/NAIP	The currently existing transformer station and fire pump house appear adjacent to the north of the subject property. The south portion of the subject property appears similar to the previous aerial photograph. A multistory parking garage associated with the ROW DTLA shopping mall has been constructed adjacent to the west of the south parking lot of the subject property.
2020	USDA/NAIP	The subject property and surrounding area appear similar to the previous aerial photograph.
2022	Google Earth	The subject property and surrounding area appear similar to the previous aerial photograph.

4.2.3 Historical Fire Insurance Maps

The EDR Company was contacted to review historical fire insurance maps for the subject property. Maps covering the subject property for ten (10) time periods between 1888 and 1970 were found. The map descriptions are summarized below in **TABLE III.** Copies of the fire insurance maps are attached in **APPENDIX II** of this report.

TABLE III
Historical Fire Insurance Maps

Date	Description
1888	The subject property does not appear on the Sanborn Map provided.
1900	The subject property does not appear on the Sanborn Map provided.
1906	The subject property is developed with the Pacific Electric Railway Co. railway yard. The north portion of the subject property is developed with a large industrial structure that is occupied by a machine shop and blacksmith. The south portion of the subject property is occupied by the railway's electrical construction department that includes a machine shop. Additionally, an oil house is located in the central portion of the subject property. The railway yard extending offsite to the west is occupied by a variety of repair/ paint shops and warehouses. Offsite across Alameda St to the east is a rail terminal with a variety of industrial tenants including a foundry, gas storage yard, and a plaster company.

TABLE III
Historical Fire Insurance Maps – Continued

Date	Description
1950	The Pacific Electric Railway Co. railway yard is relabeled as the Wholesale Terminal of the Union Terminal. The electrical department building previously located on the south portion of the subject property is removed. The industrial structure on the north portion of the subject property is being utilized as a warehouse. The oil house previously located in the central portion of the subject property has been moved to the south portion of the subject property. The terminal buildings offsite to the west are being utilized as warehouses by various tenants. The railway terminal to the east across Alameda Street has been expanded and is still occupied by a gas storage yard.
1953	The subject property and surrounding area appear similar to the previous aerial photograph.
1954	The subject property and surrounding area appear similar to the previous aerial photograph.
1959	The subject property and surrounding area appear similar to the previous aerial photograph.
1960	The subject property and surrounding area appear similar to the previous aerial photograph.
1967	The subject property and surrounding area appear similar to the previous aerial photograph.
1970	The subject property and surrounding area appear similar to the previous aerial photograph.

4.2.4 Historical Topographic Maps

Historical USGS topographic maps were provided by EDR Company and from online database sources. Maps covering the subject property for thirteen (13) time periods were found. The subject property appears developed as a railway yard by at least 1894 and is in an area of dense urban development by 1928. The Los Angeles River can be seen approximately a half mile to the east.

4.3 RECORDS REVIEW INFORMATION

4.3.1 Building Information

The parking lot on the north parcel was constructed in approximately 1989 and the parking lot on the south parcel was constructed in approximately 1983.

4.3.2 Underground Storage Tank & Hazardous Materials Research

The City of Los Angeles Fire Department (LAFD) publishes lists of records for active and inactive underground storage tanks (USTs) and hazardous materials inventories within the city of Los Angeles. CE's review of the lists released by the LAFD indicates the subject property addresses are not listed.

4.3.3 State Regulatory Agency File Review

The State of California Department of Toxic Substances Control (DTSC) Envirostor and the California Regional Water Quality Control Board (RWQCB) GeoTracker online databases were reviewed for any information they may have regarding soil, soil gas, water, or air contamination at the subject property. CE's review of the GeoTracker and Envirostor online databases indicates that no files are maintained for the subject property.

4.3.4 SCAQMD File Review

The SCAQMD online FIND database was researched for any active or inactive records related to the subject property. A review of the SCAQMD Facility Information Detail (FIND) database indicates that no records are maintained for the subject property.

4.4 SITE DRIVE-BY

A drive-by of the area within one-quarter mile of the property was conducted to help identify nearby sites that possibly use, store, or generate hazardous materials. The area surrounding the subject property consists of commercial and industrial properties. No service stations are located on the properties adjacent to the subject property. A list of selected environmental risk sites identified within a one-quarter mile radius of the subject property is included in the **STANDARD ENVIRONMENTAL RECORDS SOURCES** section of this report.

5.0 SITE RECONNAISSANCE

The site conditions were observed during a reconnaissance conducted by Eric Koons of California Environmental on April 4, 2023. California Environmental completed a Field Reconnaissance Checklist during the site reconnaissance. An Environmental Owner Questionnaire was completed by Jenni Harris, Senior Director - Real Estate Operations of Atlas Capital Group, LLC, who answered in good faith and to the extent of her knowledge. The Environmental Field Reconnaissance Checklist and Environmental Owner Questionnaires are included in **APPENDIX I**. The features described below are shown on the enclosed **FIGURE 2 - PLOT PLAN**. Photographs of the subject property are attached in the **ILLUSTRATIONS** section of this report.

5.1 DESCRIPTION OF THE PROPERTY

The subject property consists of approximately 10 acres of land on the east side of one (1) 20-acre irregular-shaped parcel. The subject property is associated with the ROW DTLA shopping center, which is located on the remainder of the subject property parcel. The subject property is currently developed with two (2) asphalt-paved parking lots bisected by Center Street. The south parking lot was constructed in approximately 1980 and the north parking lot was constructed in approximately 2002. Access to the property is via S. Alameda Street to the east. It is proposed to redevelop the subject property with several multi-unit residential structures that include one level of subterranean parking.

5.2 ADJACENT PROPERTIES

The subject property is bound to the north by East 7th Street with industrial development beyond, to the east by Alameda Street with industrial development beyond, to the south by a wholesale produce market, and to the west by The ROW DTLA shopping center.

5.3 TOPOGRAPHY AND DRAINAGE

The subject property is relatively flat with a topographic elevation of approximately 245 feet above mean sea level. Drainage from the site is by sheetflow towards the adjacent city streets. Several surface drains were observed in the north parking lot. No evidence of catch basins, sumps or standing water was observed on the subject property at the time of the site reconnaissance.

5.4 PAST USES OF THE PROPERTY

No evidence of the past use, treatment, storage, disposal or generation of hazardous substances was observed on the subject property at the time of the site reconnaissance.

5.5 USE OF HAZARDOUS SUBSTANCES

No evidence of significant hazardous substance use was observed on the subject property at the time of the site reconnaissance.

5.6 STORAGE TANKS

No evidence of existing aboveground or underground storage tanks, clarifiers, sumps, or grease interceptors was observed on the subject property at the time of the site reconnaissance.

5.7 CONTAINERS OF HAZARDOUS OR UNIDENTIFIED SUBSTANCES

No evidence of containers of hazardous or unidentified substances was observed on the subject property at the time of the site reconnaissance.

5.8 SOLID WASTE DISPOSAL

No evidence of onsite disposal or landfill of solid waste material was observed on the subject property at the time of the site reconnaissance.

5.9 POLY-CHLORINATED BIPHENYL'S (PCBs)

No evidence of PCB containing transformers or equipment was observed on the subject property at the time of the site reconnaissance.

5.10 HEATING/COOLING EQUIPMENT

There are no structures located on the subject property.

5.11 ASBESTOS CONTAINING MATERIALS (ACM)

There are no structures located on the subject property.

5.12 WASTEWATER TREATMENT AND DISPOSAL SYSTEMS

No evidence of wastewater treatment or disposal systems was observed on the subject property at the time of the site reconnaissance.

5.13 RADON

Radon hazard assessment was not included in the scope of this study. However, the EDR research report indicates the levels of radon at zero (0) of two (2) sites located within the 90021 zip code in Los Angeles County exceeded four picoCurie per Liter (4 pCi/L), the Federal Action level.

5.14 LEAD

There are no structures located on the subject property. Lead was found in soil above the residential screening level of 80 mg/Kg. Further evaluation of the lead in soil is recommended.

5.15 WELLS

No evidence of dry wells, irrigation wells, injection wells, abandoned wells, monitoring wells or other wells was observed on the subject property at the time of the site reconnaissance.

5.16 ODOR

No evidence of strong, pungent or noxious odors was noted on the subject property at the time of the site reconnaissance.

5.17 STRESSED VEGETATION

No evidence of stressed vegetation was observed on the subject property at the time of the site reconnaissance.

5.18 STAINING OR RESIDUE

No evidence of significant staining or residue was observed on the subject property at the time of the site reconnaissance.

5.19 PITS, PONDS, OR LAGOONS

No evidence of pits, ponds, and/or lagoons was observed on the subject property at the time of the site reconnaissance.

5.20 POTABLE WATER SUPPLY

Water is supplied to the subject property by City of Los Angeles Department of Water and Power.

5.21 SEWAGE DISPOSAL SYSTEM

The subject property is connected to the public sewage disposal system.

5.22 OTHER CONDITIONS OF CONCERN

No other conditions of environmental concern regarding potential sources for soil and groundwater contamination were observed on the subject property at the time of the site reconnaissance.

6.0 NEARBY CONTAMINATED SITES

6.1 LANDFILLS

The Solid Waste Information Systems (SWIS), EDR database report, and the Waste Management Unit Database (WMUD) were reviewed to identify landfills and transfer stations located near the property. These sources indicate that there are no landfills or transfer stations located within a 2,000-foot radius of the subject property. No active hazardous waste landfills are located within Los Angeles County.

6.2 OIL FIELD MAPS/METHANE HAZARD ZONES

The California Geologic Energy Management Division's (CalGEM) online mapping system (Well Finder) was researched to determine if oil production occurred on or near the subject property. The CalGEM Well Finder database indicates one (1) oil well is located approximately 250 feet east of the subject property. The well (API 0403705996) is an abandoned and plugged dry hole currently owned by Chevron U.S.A. Inc. It was installed and abandoned in 1960. This is not considered an environmental concern for the subject property.

The property is not located within a Methane Hazard Zone or Methane Buffer Zone as identified in Division 71 of the City of Los Angeles Building Code.

6.3 STANDARD ENVIRONMENTAL RECORD SOURCES

In addition to the above records, agency database lists were reviewed for known or suspected contaminated sites and for sites that store, generate or use hazardous materials near the subject property. The subject property address is identified on the standard environmental government sources researched in this report. The property is listed on the NPDES, CIWQS, and HWTS databases. These listings are likely associated with previous development activities that have occurred at the ROW DTLA shopping mall. They are not considered an environmental concern for the subject property.

The nearest listed contaminated site to the subject property is the Texaco Truck Stop (Former) (T0603700645) located across E 7th Street to the north. The offsite property is a closed LUST cleanup site. The site consisted of truck maintenance facilities, 10 USTs, and multiple dispensers. Between 1992 and 1997 several rounds of soil and groundwater assessments were implemented. The highest level of soil and groundwater contamination was identified on the west side of the property (approximately 430 feet northwest of the subject property) associated with several fuel USTs. Initial sampling in 1992 high concentrations of hydrocarbons and BTEX compounds. Soil samples collected in 1995 showed a significant decline in BTEX compounds with benzene at 2.6 mg/kg, toluene at 180 mg/kg, ethylbenzene at 120 mg/kg, and xylenes at 690 mg/kg. Groundwater sampling was only conducted in 1995 and detected TPHg up to 89,000 ug/L, benzene up to 9,200 ug/L, toluene up to 7,400 ug/L, ethylbenzene up to 3,200 ug/L, and xylenes up to 180,000 ug/L. This groundwater was collected from a perched aquifer at approximately 80 feet bgs. Groundwater sampling was attempted in 1996 and 1997, but groundwater was not present in any of the wells. All onsite USTs were removed from the property in 1994. The LARWQCB granted the site "case closed" status as a Low Risk Groundwater Site on March 6, 1998. A sample collected during HMC's 2013 subsurface assessment from between the north portion

of the subject property and this offsite release did not detect any VOCs in soil or soil gas. This indicates contaminated groundwater or soil from this offsite release is not impacting the subject property.

The environmental sites listed on the databases researched for this report located within a one-half mile radius of the subject property are presented in **TABLE IV**.

TABLE IV
Standard Environmental Record Sources

Database	Number of Sites		
	<1/8 Mile	1/8 – 1/4 Mile	1/4 to 1/2 Mile

Note: A search of public information databases may omit some nearby contaminated sites due to missing or inaccurate information in the public record.

Selected environmental risk sites found to exist within one-quarter mile radius of the property are listed below:

- **SE Rykoff & Co Facility (ROW DTLA property)** – 761 Terminal Street (150 feet & west) In 1997, a wash area and fueling station consisting of three (3) fuel USTs and dispensers was removed under LAFD permit from the offsite portion of the ROW DTLA shopping mall property. Verification samples collected after the removal activities identified elevated concentrations of hydrocarbons. The area of the USTs and one dispenser were over excavated and in total 1,000 tons of soil was removed from the property as part of the remediation effort. Verification samples collected after the remedial excavation were all below the regulatory limits. However, CE was unable to locate a closure letter for the UST removal and associated remediation. In 2013, HMC collected one (1) co-located soil and soil gas sample in the vicinity of the former wash area and fueling station. The soil and soil gas samples were non-detect for hydrocarbons and VOCs. It is considered unlikely that this release has impacted the subject property.

- **So Cal Gas/LA – Alameda MGP (19490227)** – 725 Channing Street (Across Alameda St & East) This offsite property is located across S Alameda Street to the east and is a LUST cleanup site. From 1887 until 1906 an oil gas plant was operated at site. Records indicate that MGP equipment may have been removed by 1930. The site is currently used as a Greyhound Bus parking lot. Site investigations were carried out between 1986 and 2003. The main contaminants of concern (COCs) identified were PAHs and lead in shallow soil. Three phases of remediation were carried out between 2003 and 2014. Approximately 13,000 tons of contaminated soil was removed from the property. Post-removal soil verification samples indicate the removal action objectives (RAOs) had been achieved. Based on the main impacts being associated with soil and meeting the RAOs it is considered unlikely that this offsite release has impacted the subject property.

6.4 POTENTIAL VAPOR ENCROACHMENT CONDITION (p-VEC)

The State of California has adopted the Vapor Intrusion Guidance document issued by CalEPA DTSC in October 2011 and Supplemental Guidance document issued by CalEPA DTSC and California State Water Resources Control Board in February 2023. Potential sources for vapor intrusion to indoor air include degassing of solvents and other compounds from contaminated soil and contaminated groundwater. Soil gas sampling conducted by HMC in 2013 identified concentrations of PCE, benzene, and ethylbenzene in soil gas on the south portion of the subject property that exceed the relevant DTSC SLs at a residential property. This indicates vapor encroachment into future onsite structures is possible and should be further evaluated with an updated and more extensive soil gas assessment.

7.0 APPARENT PROBLEMS AND CONCERNS

- The subject property was utilized as a railway yard from at least 1896 until the mid-1970s. Throughout this time period the property was utilized for industrial operations, including a machine shop/blacksmith furnaces, oil house (which likely contained several AST/USTs), woodworking shop, and electrical construction facility. Additionally, the south portion of the subject property was developed with railroad tracks. These operations are known to be associated with several types of contaminants including hydrocarbons, VOCs, PCBs, and metals. This is considered a REC for the subject property.

- A subsurface assessment was conducted on the subject property in 2013. The assessment consisted of soil and soil gas sampling that targeted the former industrial operations associated with the railroad operations, as well as general site screening. The assessment identified concentrations of metals in soil and VOCs in soil gas that exceed the current applicable residential screening levels (SLs). These exceedances are considered a REC for the subject property.

    - North Portion of Subject Property - One (1) soil sample in the area of the former machine shop contained lead (500 mg/Kg) above the current DTSC recommended residential SL (80- mg/Kg). Additional assessment for lead in soil is required.

    - South Portion of Subject Property - Three (3) soil gas as samples contained PCE at concentrations above the current DTSC residential SL. One (1) of these soil gas samples also contained a concentration of benzene that exceeds the current DTSC residential SL. Only one (1) of the four (4) soil gas sample locations with exceedances had a co-located soil sample, which was non-detect for hydrocarbons and VOCs.

8.0 CONCLUSIONS AND RECOMMENDATIONS

California Environmental has prepared an Environmental Site Assessment - Phase I in conformance with the scope and limitations of ASTM 1527-21 for the property located at 777 S Alameda Street, Los Angeles, California. No data gaps were encountered during the preparation of this report. Review of recorded Land Title Records including environmental liens was excluded from this report. These records should be obtained and reviewed by the user.

Throughout the 1900s the subject property was utilized as a railway yard that included a variety of industrial operations. These operations are known to be associated with several types of contaminants and is considered a REC for the subject property. A 2013 subsurface assessment identified concentrations of PCE and benzene in soil gas and lead in soil that exceed current regulatory screening levels for a residential property. This is considered a REC. No evidence of historical recognized environmental conditions (HREC) or controlled recognized environmental conditions (CRECs) were identified in connection with the subject property. The previous 2013 assessment on the subject property consisted of soil gas sampling at only 5 feet bgs with sporadic co-located soil sampling and analysis. Based on the future development plan of a residential structure including one level of subterranean parking, CE recommends implementing an updated soil and soil gas assessment. Soil characterization samples should be collected from near surface to a depth of approximately 5 feet below the proposed final grade of the subterranean basement. The soil data can be utilized to develop a profile for future disposal and to determine the extent of lead above the residential screening level. Soil gas samples should be collected from approximately 5 and 15 feet below the proposed final grade of the subterranean basement to assess vapor intrusion potential for the proposed structure.

This report is subject to the following **NOTICE**:

9.0 OPINION OF ENVIRONMENTAL PROFESSIONAL

All properties are subject to some element of environmental risk and the risk cannot be eliminated. Industrial and commercial properties developed prior to modern environmental laws are especially risk prone to environmental hazards which include, but are not limited to, wastes which may be toxic, ignitable, corrosive or reactive. The potential for these environmental hazards to impact the use of the property can be reduced by the identification and mitigation of the hazards prior to development or redevelopment of the property. Due to the difficulty in locating underground wastes, in some cases it is not always possible to ascertain that hazardous wastes are present on the property prior to development.

A Phase I environmental site assessment does not utilize subsurface exploration to check for the presence of hazardous wastes on the property. The experience of the assessor, along with the research of available reports, aerial photographs and land use records are used to evaluate the potential for hazardous wastes to occur on the site. Based on the information gained from the historical research, subsurface exploration may be recommended to check for the presence of hazardous wastes. Preexisting environmental problems such as the presence of hazardous wastes in the soil or groundwater, can be concealed by grading activities and site improvements. If such wastes are present these wastes cannot be observed.

The undersigned, Charles I. Buckley declares that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312 and have developed and performed the all-appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312. I have the specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of releases or threatened releases on, at, in, or to a property, sufficient to meet the objectives and performance factors in §312.20.

This report was prepared with the skill and competence as commonly used by environmental professionals in this area. No warranty, expressed or implied, of any kind is made or intended in connection with this report, or by the fact you are being furnished this report, or by any other oral or written statement.

Should you have any questions or desire any additional information, please contact the undersigned.

Respectfully submitted,

Charles I. Buckley

PROFESSIONAL EXPERIENCE: (continued)

Mar 84-Dec 87 KOVACS-BYER AND ASSOCIATES
Manager Environmental Services Group

- Spearheaded the development into the groundwater and environmental segments of consulting market. Ascended from project geologist status to manager of Environmental Services Group. Responsible for all aspects of project management including; organization and staffing, developing technical requirements needed to complete projects, client and agency liaison.

- Provided technical leadership for groundwater testing including design and analysis of aquifer pump tests. Lead Geotechnical Investigator for remedial repair of complex landslide terrains. Prepared Seismic Analysis for critical facilities. Recommended specialized drainage systems for abatement of groundwater problems. Project Consultant for award winning projects on which severe geotechnical problems were overcome.

Mar 80-Mar 84 GEOTECHNICAL SERVICES GROUP
BUREAU OF ENGINEERING
CITY OF LOS ANGELES
Assistant Engineering Geologist

- Performed geologic mapping in hillside areas of the City of Los Angeles. Reviewed Geotechnical Reports submitted to the City of Los Angeles for private development. Directed landslide investigations. Prepared Expert Opinion documents regarding groundwater and geologic issues for the City Engineer and City Attorney. Conducted field monitoring of known landslides within the City of Los Angeles.

Aug 79-Mar 80 UNITED STATES GEOLOGICAL SURVEY
Field Assistant

- Assisted in geological mapping for a uranium resource development project sponsored by the Department of Energy and the United States Geological Survey.

Environmental Field Reconnaissance Checklist and Owner Questionnaire

ENVIRONMENTAL FIELD
RECONNAISSANCE CHECKLIST (PART A)

Completed By: Eric Koons Title: Env. Scientist

Property Address: 777 Alameda Street, Los Angeles Date: 4/4/23

USES OF THE PROPERTY	
1. Name of present occupants of the property (include business names and addresses or unit numbers):	Unoccupied parking lot for the Row DTLA
2. Describe the present use(s) of the property:	Surface Parking Lot
3. Describe the present of adjacent properties:	West = The Row DTLA shopping center; North = 7th Street with industrial beyond; West = Alameda Street with industrial beyond; South = Bay Street with the Los Angeles Wholesale Produce Market beyond
4. Is the property used for an industrial use?	No
5. Is any adjoining property used for an industrial use?	No
6. Is the property used as a gasoline station, auto repair facility, commercial printing facility, dry cleaners, photo developing laboratory, or junkyard? If so, identify which and give the name of the business(es):	No
7. Is the property used as a landfill or a waste treatment, storage, processing, recycling, or disposal facility?	No
8. Is any adjoining property used as a gasoline station, auto repair facility, commercial printing facility, dry cleaners, photo developing laboratory, or junkyard? If so, identify which and give the name of the business(es):	No
9. Is any adjoining property used as a landfill or a waste treatment, storage, processing, recycling, or disposal facility?	No
10. Is the property used for agricultural purposes?	No
PROPERTY CONDITIONS	
11. Are there or have there been any damaged or discarded industrial or automotive batteries on the property?	No
12. Are there currently any solvents, paints, fuels, pesticides, herbicides, or other chemicals, in individual containers larger than 5 gallons or totaling more than 50 gallons, used on or stored at the property?	No
13. Are there currently any industrial drums (typically 55 gallons) or sacks of chemicals located on the property?	No
14. Is there any visible evidence fill dirt has been brought onto the property from a contaminated site?	No
15. Is there any visible evidence fill dirt has been brought onto the property from an unknown site?	No
16. Are there any waste treatment or waste disposal ponds, pits or lagoons on the property?	No

17. Is there any stained soil, or soil emitting unusual odors, on the property?	No
18. Are there any flooring, drains, or walls in the facility that are stained by substances other than water or have emitted unusual odors?	No
19. Is there heating and cooling equipment onsite?	No
20. What is the fuel source for any onsite heating and cooling equipment?	N/A
21. Is there any visible evidence of storage tanks (underground or aboveground) at the property?	No
22. Are there currently or have there been any vent pipes, fill pipes, fill ports, or surface covers indicating possible fill ports on the property or adjacent to any building located on the property?	No
23. Is there visible evidence of geotechnical and/or environmental subsurface assessments such as patched borings or groundwater monitoring well covers?	Yes, several borings on both the north and south parking lot that look relatively new.
24. Are there any oil wells, drilling sumps, mud pits, or oil pipelines on or adjacent to the property?	No
25. Are there any pipelines on, beneath, or adjacent to the property, other than water, sewer, and natural gas utilities serving the property?	No
26. Is the property known to be located in a methane hazard area due to oil fields, natural seepage, or landfill gas?	No
27. Does the property or any facility at the property produce wastewater other than domestic sewage and storm water runoff?	No
28. Are there any waste water treatment systems (clarifiers, oil/water separators, grease traps, filtration systems, etc.) at the property?	No
29. How is waste water from the property disposed of? Sanitary sewer. Septic system. Surface water. Pond, pit, sump, or well. Other (describe).	Sewer
30. Does the property or any facility at the property produce solid waste other than domestic trash and greenwaste?	No
31. How is solid waste from the property disposed of? Municipal or private trash service. Recycling. Onsite dumping or burial. Other (describe).	N/A
32. How is solid waste stored at the property?	N/A
33. Does the property or any facility at the property generate hazardous or special waste in the course of normal operation? Examples include spent solvents, photo processing waste, waste oil, used filters, etc. Provide copies of generator notification or waste manifests.	No

34. If hazardous or special wastes are generated at the property, how are they stored?	N/A
35. Are pesticides or herbicides stored, mixed, or disposed of on the property?	No
36. Are there any transformers, capacitors, or hydraulic equipment on the property that are known or suspected of containing PCBs?	No, Transformers are new and not expected to contain PCBs
37. Are there any building materials on the property known or suspected to contain asbestos? Please describe:	N/A
ENVIRONMENTAL COMPLIANCE	
38. Does the property or any occupant of or facility on the property have any licenses, permits, registrations, or notifications for tanks, pipelines, industrial waste, wastewater treatment, wastewater discharge, stormwater discharge, waste disposal, waste storage or treatment, air emissions, chemical use, or chemical storage?	No
39. Is there visible evidence of any spills, leaks, or other releases or threatened releases of any hazardous substances or petroleum products from the property to soil, groundwater, or surface water?	No
40. Is there visible evidence of any release or threatened release of any hazardous substances or petroleum products from another location to soil, groundwater, or surface water at the property?	No
41. Is there visible evidence of the current or past existence of environmental violations on the property or in any facility located on the property?	No
42. Does the property discharge waste water, other than storm water runoff, into a storm drain or onto adjacent properties or streets?	No
43. Does the property discharge waste water, other than storm water, into a sanitary sewer system?	No
44. Is there visible evidence that hazardous substances, petroleum products, unidentified waste materials, tires, batteries, or any other waste materials have been dumped, buried, or burned on the property?	No

CALIFORNIA ENVIRONMENTAL
ENVIRONMENTAL FIELD INTERVIEW QUESTIONNAIRE (PART B)

Completed By: Jenni Harris Title: Senior Director - Real Estate Operations

Property Relation: Phone: 213-988-8890

Property Address: 1318 E. 7th Street, Los Angeles, CA 90021

APN(s): 5146-009-004, 5146-009-005

Current Property Owner: Alameda Square Owner LLC Site Name: ROW DTLA

Present Property Use: (Check all that apply) ☐ Residential ■ Commercial ☐ Industrial ☐ Agricultural ☐ Government ☐ Undeveloped ☐ Other:

# of Buildings: 7 Date(s) Built: 1917-1923 / 2015 # of Units: 182 Total sq. ft. 1,504,865

Utility Provider: Water: LA DWP Gas: SoCal Gas Electric: LA DWP

Occupants and General Business Type (Include Unit Numbers): Office, retail, restaurant

Past Owners and Dates of Ownership: EVOQ Properties, Inc., Alameda Produce Market, LLC, Meruelo Maddc

Past Uses of the Property: Light industrial, manufacturing

Adjacent Property Use (Include General Business Type and Names):
North: Metro service yard, housing/hotel
East: Commercial, Industrial, wholesale produce distribution
South: Wholesale produce market
West: Commercial, wholesale candy and spice sales

California Environmental (CE) is asking if any of the following helpful documents exist.
If so, CE requests copies of such documents be emailed to ceworks@calenviro.com.

If you answered 'Yes' to any of the items above, please explain:

ACM remediated throughout buildings M1, M2, B1, B2 and B3. Three USTs were removed from the property in 1997.

PROPERTY CONDITIONS	
Is there currently, or has there been, any solvents, paints, fuels, pesticides, herbicides, or other chemicals in individual containers larger than 5 gallons or totaling more than 50 gallons, used on or stored at the property?	Not sure
What is the current topography (level, sloped, uneven, hills, valleys, etc.) of the property?	Level
Do you have any knowledge that fill dirt has been brought onto the property from a contaminated site?	No
Do you have any knowledge that fill dirt has been brought onto the property from an unknown site?	No
Is there any stained soil, or soil emitting unusual odors, on the property?	No
Is there any flooring, drains, or walls in the facility that are stained by substances other than water or have emitted unusual odors?	No
Is there heating and cooling equipment onsite?	Yes
What is the fuel source for any onsite heating and cooling equipment?	Electric/Gas
Are there currently or have there been any oil wells, drilling sumps, mud pits, or oil pipelines on or adjacent to the property?	Not that I am aware of
Are there currently or have there been any pipelines on, beneath, or adjacent to the property, other than water, sewer, and natural gas utilities serving the property?	Not that I am aware of
Is the property known to be located in a methane hazard area due to oil fields, natural seepage, or landfill gas?	Not sure
How is wastewater from the property disposed of (sanitary sewer, septic system, surface water, pond, pit, sump, etc.)?	sanitary sewer
Does the property or any facility at the property produce solid waste other than domestic trash and greenwaste?	No
How is solid waste from the property disposed (municipal or private trash service, recycling, onsite dumping, burial, etc.)? Please list the service company.	NASA Trash & Recycling
How is solid waste stored at the property?	Trash bins or compactor
Does the property or any facility at the property generate hazardous or special waste in the course of normal operation?	No
Has the property or any facility at the property generated hazardous or special waste due to occasional or one-time events such as asbestos abatement, soil or groundwater cleanup, or accidental events such as spills?	Yes
If hazardous or special wastes are generated at the property, how are they stored?	No hazardous waste stored onsite
Have pesticides or herbicides been stored, mixed, or disposed of on the property?	No
Are there any building materials on the property known or suspected to contain asbestos?	No
Have any asbestos surveys been performed at the property?	Yes
Have any asbestos removal or other abatement projects taken place at the property?	Yes
Is there any known or suspected lead-based paint in buildings located at the property?	Yes

ENVIRONMENTAL COMPLIANCE	
Has the property ever been the subject of an environmental site assessment or environmental audit, with respect to soil, groundwater, surface water, air, or site facilities and processes?	Yes
Has any environmental site assessment of the property indicated the presence of hazardous substances or petroleum products on, or contamination of, the property or recommended further assessment of the property? Please describe the manner in which any recognized environmental conditions have been addressed.	Phase 1 and Phase 2 reports have indicated some presence, but no further action was required.
Does the property or any occupant of or facility on the property have any licenses, permits, registrations, or notifications for tanks, pipelines, industrial waste, wastewater treatment, wastewater discharge, stormwater discharge, waste disposal, waste storage or treatment, air emissions, chemical use, or chemical storage?	Yes
Have you been informed of the current or past existence of hazardous substances or petroleum products on the property or in any facility located on the property?	No
Do you have knowledge of any spills, leaks, or other releases or threatened releases of any hazardous substances or petroleum products from the property to soil, groundwater, or surface water?	No
Do you have knowledge of any release or threatened release of any hazardous substances or petroleum products from another location to soil, groundwater, or surface water at the property?	No
Have you been informed of the current or past existence of environmental violations on the property or in any facility located on the property?	No
Do you have any knowledge of environmental liens or governmental notifications relating to violations of environmental laws with respect to the property or any facility located on the property?	No
Do you have knowledge of any past, threatened, or pending lawsuits, enforcement actions, or administrative proceedings concerning the property?	No
If the property is served by a private well or a non-public water system, do you have any knowledge that contaminants exceeding applicable guidelines have been identified in the well or water system, or has the well or system been designated as contaminated by any governmental agency?	No
Does the property discharge waste water, other than storm water runoff, into a storm drain or onto adjacent properties or streets?	No
Does the property discharge waste water, other than storm water, into a sanitary sewer system?	Yes
Do you have any knowledge that hazardous substances, petroleum products, unidentified waste materials, tires, batteries, or any other waste materials have been dumped, buried, or burned on the property?	No

ADDITIONAL COMMENTS

Please provide any additional comments regarding the subject property:

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

3666
777 S Alameda Street
Los Angeles, CA 90021
EDR Inquiry # 7277931.8

Client Name:

California Environmental
30423 Canwood Street Suite 208
Agoura Hills, CA 93012
Contact: Ryan Bzoskie

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by California Environmental were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by California Environmental were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA) INFORMATION PROVIDED IN THIS REPORT.** Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was identified in the following records. For more information on this property see page 9 of the attached EDR Radius Map report:

Site	Database(s)	EPA ID
ALAMEDA SQUARE MARKE 777 SOUTH ALAMEDA ST LOS ANGELES, CA 90021	NPDES CIWQS	N/A
ALAMEDA SQUARE OWNER 777 S ALAMEDA, # 100 LOS ANGELES, CA 90021	HWTS	N/A

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL..... National Priority List
Proposed NPL..... Proposed National Priority List Sites
NPL LIENS..... Federal Superfund Liens

Lists of Federal Delisted NPL sites

Delisted NPL..... National Priority List Deletions

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY..... Federal Facility Site Information listing
SEMS..... Superfund Enterprise Management System

Lists of Federal RCRA TSD facilities

RCRA-TSDF..... RCRA - Treatment, Storage and Disposal

Lists of Federal RCRA generators

RCRA-VSQG..... RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

Federal institutional controls / engineering controls registries

LUCIS..... Land Use Control Information System

US ENG CONTROLS..... Engineering Controls Sites List
US INST CONTROLS..... Institutional Controls Sites List

Federal ERNS list

ERNS..... Emergency Response Notification System

Lists of state and tribal leaking storage tanks

INDIAN LUST..... Leaking Underground Storage Tanks on Indian Land

Lists of state and tribal registered storage tanks

FEMA UST..... Underground Storage Tank Listing
INDIAN UST..... Underground Storage Tanks on Indian Land

Lists of state and tribal voluntary cleanup sites

INDIAN VCP..... Voluntary Cleanup Priority Listing

Lists of state and tribal brownfield sites

BROWNFIELDS..... Considered Brownfieds Sites Listing

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Landfill / Solid Waste Disposal Sites

WMUDS/SWAT..... Waste Management Unit Database
HAULERS..... Registered Waste Tire Haulers Listing
INDIAN ODI..... Report on the Status of Open Dumps on Indian Lands
ODI..... Open Dump Inventory
DEBRIS REGION 9..... Torres Martinez Reservation Illegal Dump Site Locations
IHS OPEN DUMPS..... Open Dumps on Indian Land

Local Lists of Hazardous waste / Contaminated Sites

US HIST CDL..... Delisted National Clandestine Laboratory Register
AOCONCERN..... Key Areas of Concerns in Los Angeles County
SCH..... School Property Evaluation Program
CDL..... Clandestine Drug Labs
Toxic Pits..... Toxic Pits Cleanup Act Sites
US CDL..... National Clandestine Laboratory Register

Local Land Records

LIENS..... Environmental Liens Listing
LIENS 2..... CERCLA Lien Information

Records of Emergency Release Reports

HMIRS..... Hazardous Materials Information Reporting System
CHMIRS..... California Hazardous Material Incident Report System
LDS..... Land Disposal Sites Listing

MCS	Military Cleanup Sites Listing
SPILLS 90	SPILLS 90 data from FirstSearch

Other Ascertainable Records

DOD	Department of Defense Sites

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 01/25/2023 has revealed that there are 3 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 11/21/2022 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 11/21/2022 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 11/21/2022 has revealed that there are 12 RCRA-SQG sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/24/2022 has revealed that there are 39 ENVIROSTOR sites within approximately 1 mile of the target property.

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 84 UST sites within approximately 0.25 miles of the target property.

Local Land Records

DEED: The use of recorded land use restrictions is one of the methods the DTSC uses to protect the public from unsafe exposures to hazardous substances and wastes .

A review of the DEED list, as provided by EDR, and dated 11/28/2022 has revealed that there is 1 DEED site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 11/21/2022 has revealed that there are 21 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 01/03/2022 has revealed that there are 4 PFAS ECHO sites within approximately 0.25 miles of the target property.

LOS ANGELES CO LF METHANE: This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

A review of the LOS ANGELES CO LF METHANE list, as provided by EDR, and dated 01/10/2022 has revealed that there is 1 LOS ANGELES CO LF METHANE site within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

SO CAL GAS/OLYMPIC B	2424 E OLYMPIC BLVD	SE 1/2 - 1 (0.701 mi.)	BA287	1117

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 8 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Citation:	23 CCR 16 2715(f)(3) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(f)(3)
Violation Description:	Failure to maintain a list of employees trained by the designated operator on-site or off-site at a readily available location, if approved by the UPA.
Violation Notes:	Returned to compliance on 04/20/2018.
Violation Division:	Los Angeles City Fire Department
Violation Program:	UST
Violation Source:	CERS,
Site ID:	431462
Site Name:	The ROW
Violation Date:	02-14-2022
Citation:	23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Description:	For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes:	Returned to compliance on 04/15/2022. OBSERVATION: Facility did not comply with one or more of the following DO inspection requirements: DO selected YES on 2/11/2022 DO report for last check box in Section 8, regarding if sump alarms were responded to by qualified technician, per DO notes in Section 3 the alarms cleared themselves. This was also noted by the inspector on the 9/21 & 8/21 DO reports. DO not noting sensors that went into alarm in Section 9 on multiple DO reports. Tank owner/operator did not put date in Section 6 on 2/2022 DO report. CORRECTIVE ACTION: Have DO mark NO for last check box in Section 8 on 2/2022, 9/21, 8/21 DO reports as alarms were not responded to by qualified technicians as per the DO they cleared themselves. Have DO note all sensors that went into alarm in Section 9. Have tank owner/operator note date in Section 6 on 2/2022 DO inspection report. Have DO or tank owner/operator email copies of the corrected inspection reports.

Violation Description:	For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.

ALAMEDA SQUARE OWNER LLC (Continued) **S118925915**

Violation Notes:	Returned to compliance on 02/19/2021. OBSERVATION: Facility did not comply with one or more of the following DO inspection requirements: DO did not include date on alarm print out on 1/21-3/20 DO reports. DO incorrectly marked YES in Section X for secondary containment testing. Ensure DO is making clear explanation on what happened when fuel alarms are cleared on 11/20-8/20 DO reports. CORRECTIVE ACTION: Ensure that DO is including the date on the alarm print outs. DO corrected Section 10 on 11/20 DO report to N/A to secondary containment testing date. with all the requirements noted above. Ensure DO is properly explaining what happen when the fuel alarms were cleared on DO reports listed above. Submit copy of compliant DO inspection record.

Violation Description:	Failure to have a properly qualified service technician test leak detection equipment as required every 12 months (vapor, pressure, hydrostatic (VPH) system, sensors, line-leak detectors (LLD), automatic tank gauge (ATG), etc.).
Violation Notes:	Returned to compliance on 08/12/2019. OBSERVATION: Annual monitoring system certification and/or leak detector testing, were last performed on 2/24/2017 and was completed on 4/25/2019, 2 months past due. These tests are required once every 12 months. CORRECTED ON SITE: Immediately schedule these tests and provide 48 hours notification to the CUPA. Testing was completed on 4/25/2019 done by JDS Testing. As discussed on site any future late testing will be considered a Class I violation and subject to fine assessment.

SIC Code 2:	Not reported
Primary Waste Type:	Inert/Influent or Solid Wastes that do not contain soluble pollutants or organic wastes and have little adverse impact on water quality. Such wastes could cause turbidity and siltation. Uncontaminated soils, rubble and concrete are examples of this category.
Primary Waste:	STORMS
Waste Type2:	Not reported
Waste2:	Stormwater Runoff
Primary Waste Type:	Inert/Influent or Solid Wastes that do not contain soluble pollutants or organic wastes and have little adverse impact on water quality. Such wastes could cause turbidity and siltation. Uncontaminated soils, rubble and concrete are examples of this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The POTW Does not have an approved pretreatment program. Some POTWs may have local pretreatment programs that have not been approved by the regional board and/or EPA.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

FARMERS PRODUCE PROJECT INC (Continued) **S101584054**

Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	05/20/1993
Comments:	The Department completed review of the PEA. A Manufactured Gas Plant (MGP) was operated at the site in the late 1800s and early 1900s. Gas was produced from crude oil for distribution in the site area. Several companies operated at the site. In 1909, the site was owned by the Los Angeles Gas and Electric Corp., which merged with the Southern California Gas Company in 1937. SoCalGas owned the property until 1976, and sold to the current owners. The MGP was dismantled sometime before 1906. The byproducts from the manufactured gas operation were tars, oils, sludges, and lampblack. Elevated levels of polycyclic aromatic hydro- carbons (PAH), heavy metals such as lead and arsenic and cyanides were found at the site. The PEA concluded that there was contamination at the site above screening values. Therefore, the Department recommended that further investigation or assessment at the site was necessary.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violation Program: UST
Violation Source: CERS,

Site ID: 34485
Site Name: Greyhound Lines, Inc. #892001
Violation Date: 02-13-2019
Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes: Returned to compliance on 02/13/2019. OBSERVATION: Owner/Operator failed to meet one or more of the requirements applicable to overfill prevention equipment. CORRECTIVE ACTION: Maintain overfill prevention system to comply with the deficiencies noted above. Submit

GREYHOUND LINES INC. LOS ANGELES MAINTENENCE (Continued) **S101617241**

verfiication. ** Mr. Acosta, please have your overfill prevention equipment tested by October 13-2018 and every 3 years thereafter. CORRECTED ON SITE BY TANKNOLOGY 11-30-2018 WITH RESULTS SENT TO THE LAFD CUPA **

Violation Date: 02-19-2020
Citation: 23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Description: For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes: Returned to compliance on 03/25/2020. OBSERVATION: Facility did not comply with one or more of the following DO monthly inspection requirements: DO incorrectly marked NO for last check box on 1/9/2020 per Work Order, alarm was responded to by a trained UST service tech. Tank owner/operator did not fill out Section V, DO filled that Section out. Tank owner/operator did not write in a response in Section V for fuel alarm alarm noted by DO in Section III on 1/9/2020 DO report. 3/8/2019 DO report is missing Work Order for responded to alarm on 2/14/2019. CORRECTIVE ACTION: Have DO mark YES for last check box in Section VIII on 1/9/2020 DO report. Ensure only the tank owner/operator fills out Section V. A proper response was provided on site for 1/9/2020 DO report. Locate missing Work Order for 3/8/2019 DO report for responded to alarm on 2/14/2019. Submit copy of compliant DO inspection record.

Citation:	23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Description:	For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes:	Returned to compliance on 02/25/2022. OBSERVATION: Facility did not comply with one or more of the following DO inspection requirements: DO noted older ICC expiration date on 12/30/2021 DO inspection report of 1/11/2022. CORRECTIVE ACTION: Have DO correct ICC exp date on 12/30/2021 DO inspection report to 12/23/2023. Submit copy of compliant DO inspection record.

Evaluation:
Eval General Type: Other/Unknown
Eval Date: 10-29-2018
Violations Found: Yes
Eval Type: Other, not routine, done by local agency
Eval Notes: Second Notice of Violation Inspection Report Documents uploaded to CERS were reviewed. Indicated previously in this report are violations, originally issued on 9-14-18 that have not been resolved by the original COMPLY BY date. These violations have been re-issued and the violation class upgraded. Review and correct all violations indicated in this report, on or before the new COMPLY BY date associated with each violation. Failure to resolve these violations will result in this facility being subject to formal enforcement. New user instructions are provided below. The LAMC, Sections (L.A.M.C. SECTIONS 57.105.1.4; 57.120.3; 57.121.2 and 57.121.2.1.) requires businesses that store, use or handle hazardous materials in the City of Los Angeles to obtain a Consolidated Permit from the Los Angeles Fire Department CUPA. To receive a Consolidated Permit you must satisfy the following requirement: **** Annual submission of a Hazardous Materials Business Plan into CERS is [Truncated]

Eval Notes: On site for routine hazardous materials and business emergency plan inspection. Consent to enter and inspect was given by Veronica Seglin. Observed the facility and inspected hazardous materials storage. Annual employee safety training records were not maintained. Facility has also not electronically disclosed the on site hazardous materials inventory or submitted a business emergency plan in California Environmental Reporting System (CERS). Please go to https://cersbusiness2.calepa.ca.gov to complete a chemical inventory disclosure and business emergency plan. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) within 30 days of the change.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Citation:	23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Description:	For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes:	Returned to compliance on 12/17/2019. OBSERVATION: Facility did not comply with one or more of the following DO monthly inspection requirements: Tank owner/operator did not note date in Section V of 10/21/2019 DO report. Tank owner/operator did not write in response in Section V to compliance issues noted by DO in Section III on 8/2019, 7/2019, 6,2019, 3/2019, 2/2019, & 1/2019 DO reports. DO did not fill out Section VIII of 11/20/2019 DO report. CORRECTIVE ACTION: Tank owner/operator added date to Section VI of 10/2019 DO report and wrote in responses in Section V on DO reports listed above, those violations were corrected on site. Have DO fill out Section VIII on 11/20/2019 DO report and submit a copy of compliant DO inspection record to the Inspector.

Violation Description:	Leak detection equipment disabled or tampered with in a manner that would prevent the monitoring system from detecting and/or alerting the owner/operator of a leak.

TIMES MIRROR CO, LOS ANGELES T (Continued) **S103639737**

Violation Notes:	Returned to compliance on 12/14/2018. OBSERVATION: Owner/Operator tampered with and/or disabled leak detection equipment in a manner that would prevent the monitoring system from detecting and/or alerting the owner/operator of a leak. The Owner/Operator shall not disable or tamper with monitoring equipment. Repair/replace equipment so that it functions per manufacturer's specifications The VR 420 sensor in the trench sump (Sensor L7) had the float on the sensor flipped so that the sensor would not go into alarm. Water was noted in the same sump as L7 VR 420 sensor in an amount enough to cause an alarm CORRECTED ON SITE: Tester Ron Franklin switched the float back to normal position and tested sensor which functioned properly during testing. Water was removed onsite and was properly disposed of.

Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste:	STORMS
Waste Type2:	Not reported
Waste2:	Stormwater Runoff
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as

LOS ANGELES TIMES COMMUNICATIONS LLC (Continued) **S101584521**

cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Site Name:	LOS ANGELES WHOLESALE PRODUCE
Violation Date:	04-22-2021
Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of

LOS ANGELES WHOLESALE PRODUCE (Continued) **S123536870**

	hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	Returned to compliance on 11/09/2021. OBSERVATION: Owner/Operator is a small quantity generator and failed to send hazardous waste (used oil and used paint thinner) offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles), or has failed to comply with the conditions of CCR 66262.34(d) and has stored hazardous waste over 90 days. CORRECTIVE ACTION: Dispose of hazardous waste that has been stored over the applicable time limit and provide documentation that the violation has been corrected.
Violation Division:	Los Angeles County Fire Department
Violation Program:	HW

Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	Returned to compliance on 01/30/2019. OBSERVATION: 3 x 55-gallon drums of liquid waste paint related material/solvent located in the hazardous waste accumulation area were observed without an accumulation start date (2 drums) and with an accumulation start date of February 2013. Hazardous waste disposal records confirm that this hazardous waste has been stored in excess of 180 days from the accumulation start date. CORRECTIVE ACTION: Dispose of the 3 drums of waste paint related material/solvent and submit a copy of the manifest/receipt to the CUPA.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

CERS Description: Hazardous Waste Generator

Violations:
Site ID: 75138
Site Name: THE KOREA TIMES LOS ANGELES
Violation Date: 09-24-2018
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 01/07/2019. Observation: Owner/operator failed to ensure all hazardous wastes are properly labeled with the required information. Observed all hazardous waste containers lacking the required hazardous waste labels. Corrective Action: Ensure all hazardous wastes are properly labeled with the required information.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS,

Site ID: 75138
Site Name: THE KOREA TIMES LOS ANGELES
Violation Date: 09-24-2018
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes: Returned to compliance on 01/07/2019. Observation: Owner/operator failed to provide complete manifest records for the last 3 years. Corrective Action: Maintain and provide manifests for the last 3 years for all hazardous wastes generated on site including the waste inks.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS,

Site ID: 75138
Site Name: THE KOREA TIMES LOS ANGELES
Violation Date: 09-24-2018
Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents

THE KOREA TIMES LOS ANGELES (Continued) **S108432305**

to air, soil, or surface water which could threaten human health or the environment.

Violation Notes: Returned to compliance on 01/07/2019. Observation: Owner/operator failed to maintain the facility to prevent release of hazardous wastes. Observed accumulation of waste inks on the floor under and around the containers of waste inks. Corrective Action: Thoroughly clean up the area to remove the accumulation of waste inks on the floor under and around the containers of waste inks.
Violation Division: Los Angeles County Fire Department
Violation Program: HW

Violation Date: 11-25-2019
Citation: HSC 6.5 25201 - California Health and Safety Code, Chapter 6.5, Section(s) 25201
Violation Description: Failure to obtain a permit or grant of interim status after generator has accumulated hazardous waste on-site for longer than 90 days.
Violation Notes: Returned to compliance on 12/05/2019. OBSERVATION: 55-gallon drum of used absorbent located in the CNG area was observed with an accumulation start date of 4/2/2019 and a manifest/receipt demonstrating disposal within the past 90 days was not available. CORRECTIVE ACTION: Dispose of used absorbent and submit a copy of the manifest/receipt to the CUPA.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS,

Site ID: 42607
Site Name: LA COUNTY METROPOLITAN TRANSP DIV 1
Violation Date: 10-03-2022
Citation: HSC 6.5 25244.19 - California Health and Safety Code, Chapter 6.5, Section(s) 25244.19
Violation Description: Failure of a generator to conduct, when required, a source reduction evaluation review and plan every four years, and/or failure of the review and plan to contain all required information.
Violation Notes: Returned to compliance on 10/20/2022. OBSERVATION: Failure of the Owner/Operator to conduct a source reduction evaluation review and plan every four years, or the review and/or plan failed to contain all required information. CORRECTIVE ACTION: Conduct a source reduction evaluation review and plan at this time and every four years thereafter, and ensure review and plan contain all required information. Submit a copy to the CUPA.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS,

Site ID: 42607
Site Name: LA COUNTY METROPOLITAN TRANSP DIV 1
Violation Date: 10-03-2022
Citation: HSC 6.5 25160(b)(3) - California Health and Safety Code, Chapter 6.5, Section(s) 25160(b)(3)
Violation Description: Failure to determine the status of any hazardous waste if a signed copy of the manifest isn t received within 35 days of the date the waste was accepted by the initial transporter and/or to submit an Exception Report to DTSC if a signed copy of the manifest isn t received within 45 days of the date the waste was accepted by the initial transporter.

LA COUNTY METROPOLITAN TRANSP DIV 1 (Continued) **1006831616**

Violation Notes:	Returned to compliance on 10/20/2022. Observation: The generator failed to determine the status of a uniform hazardous waste manifested shipment within 35 days from the date the waste was shipped, and/or to submit an exception report to DTSC if a signed copy of the manifest isn't received within 45 days of the date the waste was accepted by the initial transporter. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that the generator has determined the status of the hazardous waste manifest shipment for 2022 disposals or a copy of the exception report submitted to DTSC, if applicable.

Citation:	HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Description:	Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes:	Returned to compliance on 09/30/2022. OBSERVATION: The business failed to electronically submit complete and accurate chemical inventory information for all hazardous materials on site at or above reportable quantities. CORRECTIVE ACTION: Review, update and resubmit the Hazardous Materials Inventory into CERS to include all hazardous material stored in a capacity equal to or greater than 55 gallons of liquid, 200 cubic feet of compressed gas or 500 pounds in weight of a solid. Please correct the following; Update: 1. Average Daily Amount for multiple hazardous materials was the same as max amount. Update to a lower number 2. Inspector found more oxy citrus and energy plus red on-site than was listed on CERS, update those quantities to correct amount that is stored on-site 3. Motor oil, Anti-freeze, and grease were all discovered to be stored in steel drums as well as the listed AST's on-site, Update to include steel drums

Violation Date:	02-22-2022
Citation:	HSC 6.7 25291(b) - California Health and Safety Code, Chapter 6.7, Section(s) 25291(b)
Violation Description:	Failure of the UST system to be designed and constructed with a monitoring system capable of detecting the entry of the hazardous substance into the secondary containment.
Violation Notes:	Returned to compliance on 02/22/2022. OBSERVATION: Owner/Operator failed to design or construct a UST system with a monitoring system capable of detecting the entry of the hazardous substance into the secondary containment. Diesel dispenser fed by above-ground piping does not have under dispenser containment per Title 23 Section 2636(g) In accordance with UST Regulations, all dispensers require UDCs to be installed that serve as secondary containment or otherwise prevent unauthorized releases from entering the environment. The absence of a traditional dispenser does not exempt a facility from the UDC requirement. Facilities that do not have UDCs beneath their dispensers must install, test, and monitor UDCs meeting the requirements of UST Regulations. CORRECTIVE ACTION: UST system must be modified or repaired so that the monitoring system is capable of detecting the entry of the hazardous substance into the secondary containment to ensure the piping that feeds the diesel dispenser has means to meet Title 23 [Truncated]

Violation Date:	02-22-2022
Citation:	Un-Specified
Violation Description:	UST Program - Administration/Documentation - General Local Ordinance - Must include violation description and proper ordinance citation in the "comment" section.
Violation Notes:	Returned to compliance on 03/04/2022. OBSERVATION: Facility's Emergency Shut-off (ESO) sign on the south east corner of the building where the dispenser is located is hard to see from the actual dispenser. CORRECTION ACTION: Facility will need to install a sign or decal with an arrow that is easily visible to people fueling at the dispenser notifying them of the location of the ESO. Send a picture to the Inspector when the new sign is installed.

Citation:	HSC 6.7 25284, 25286 - California Health and Safety Code, Chapter 6.7, Section(s) 25284, 25286
Violation Description:	Failure to submit a complete and accurate application for a permit to operate a UST, or for renewal of the permit.
Violation Notes:	Returned to compliance on 03/17/2021. OBSERVATION: UST tank information is not current in CERS. In Product/waste piping construction under PIPING SYSTEM TYPE for T1 Diesel it states "SUCTION 2636(A)(3)". CORRECTIVE ACTION: In Product/waste piping construction under PIPING SYSTEM TYPE for T1 it should state "CONVENTIONAL SUCTION".

Violation Description:	Failure to promptly correct visible discharges and promptly remove any accumulations of oil in diked areas.

LA COUNTY METROPOLITAN TRANSP DIV 1 (Continued) **1006831616**

Violation Notes:	OBSERVATION: Failure to promptly correct visible discharges and promptly remove any accumulations of oil in diked areas. AST had visible leaks on top and pump area appears to be leaky. Per review of facility's month inspections there were multiple entries noted of staining on tanks. CORRECTIVE ACTION: Promptly correct any visible discharges and promptly remove any accumulations of oil in diked areas.

Violation Date:	05-29-2019
Citation:	HSC 6.7 25292.1(a) - California Health and Safety Code, Chapter 6.7, Section(s) 25292.1(a)
Violation Description:	Failure to operate the UST system to prevent unauthorized releases including leaks, spills, and/or overfills.
Violation Notes:	Returned to compliance on 07/05/2019. OBSERVATION: Owner/Operator failed to meet one or more of the requirements applicable to overfill prevention equipment. Facility did not test overfill protection before the October 13th 2018 deadline. CORRECTIVE ACTION: Overfill protection was tested on 10/12/2018 during monitor cert by Javier Soto with Tank Specialists. T2 (#6) 87 did not have a flapper valve. Facility pulled a permit to install a new flapper valve which was installed by Wayne Perry on 3/14/2019. Wayne Perry was unable to measure the ball float in T2 (#6) 87 to ensure the ball float is set higher than the flapper valve. Have a technician pull the ball float in T2 (#6) 87 to ensure the ball float is set higher than the flapper and if not remove the ball float so it does not interfere with the flapper valve function.

Violation Description: For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of

LA COUNTY METROPOLITAN TRANSP DIV 1 (Continued) **1006831616**

	liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes:	Returned to compliance on 07/05/2019. OBSERVATION: Facility did not comply with one or more of the following DO monthly inspection requirements: DO inspections on 4/22/2019 and 1/25/2019 were past 30 days since last the previous DO inspection which happened on 3/14/2019 & 12/112018 respectively. Tank owner/operator did not fill in name in Section VI. CORRECTIVE ACTION: Ensure DO inspections are occurring at least every 30 days and have tank owner/operator print his name on the DO reports in Section VI.

Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes: Returned to compliance on 03/22/2019. OBSERVATION: The ATG for T13 & 6 used as the overfill prevention system is not currently functional, it alarms the VR, but does set off the audible/visual alarm to alert the driver. CORRECTIVE ACTION: Immediately discontinue deposition of petroleum into this tank until the component is repaired or replaced by a properly licensed, trained, and certified contractor under permit and inspection of the CUPA. If the failed component can t be replaced immediately, there is a possibility that T13 & 6 UST system may be red tagged to prevent fuel inputs.

reviewed on site. Review and correct any violations indicated previously in this report, on or before the COMPLY BY date associated with each violation. NOTE: The LAMC, Sections (L.A.M.C. SECTIONS 57.105.1.4; 57.120.3; 57.121.2 and 57.121.2.1.) requires businesses that store, use or handle hazardous materials in the City of Los Angeles to obtain a Consolidated Permit from the Los Angeles Fire Department CUPA. The California Health and Safety Code (CHAPTER 6.67 SECTION 25270) requires that facilities meeting either of the following requirements be added to the APSA (Aboveground Petroleum Storage Act) program and comply with the regulations set forth in the CHSC. Storage of any liquid petroleum based product [Truncated]

Eval Division: Los Angeles City Fire Department
Eval Program: APSA
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 10-12-2018
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: LAFD Inspector Christopher Young on site this date 10/12/2018 to conduct routine inspection of underground storage tank facility. Monitoring System components were observed and verified this date. Consent to enter, inspect and take photographs was given on this date by Roger Uhden, Senior Environmental. Tank 1, 2, & 4 are located off of Alameda St south off of 6th st near the exit of the property. T3 is located Northwest side of property behind bus mechanics depot. Monitoring system certification and line test was conducted at this time. Monitoring certification was performed by JAVIER SOTO WITH TANK SPECIALISTS, Monitoring System components were observed and verified on this date. Tester provided the following certifications: Javier Soto ICC: #8807602 Exp: 10/23/2019 VR: #B41506 Exp: 6/7/2020 The UST monitoring panel showed all functions normal. The monitoring set up and alarm history were provided for review. The sumps and UDCs were opened for inspection and [Truncated]

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Evaluation:

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	11-20-2020
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	The Remote Facility Inspection Application was reviewed. The Business Activities, Owner/Operator Identification, Hazardous Materials Inventory, Site Map, Emergency Response/Contingency Plan and Employee Training Plan sections were reviewed in CERS. Employee Training records were reviewed as well. Review and correct any violations indicated previously in this report, on or before the COMPLY BY date associated with each violation. NOTE: Due to the COVID-19 pandemic and in an effort to minimize transmission risk this inspection was completed remotely. The accuracy of the inventory, site map and spill release history was verified through the Remote Facility Inspection Application submitted by the facility. Please note that future inspections may not be eligible for remote facility inspections. The

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Eval Notes: On site for routine hazardous materials and business emergency plan inspection. Consent to enter and inspect was given by (Serena Liu). Observed the facility and inspected hazardous materials storage. Annual employee safety training records were not maintained. Facility has also not electronically disclosed the onsite hazardous materials inventory or submitted a business emergency plan in California Environmental Reporting System (CERS). Please go to https://cersbusiness2.calepa.ca.gov to complete a chemical inventory disclosure and business emergency plan. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) within 30 days of the change.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Eval Notes: Business was a referral from DMU to check to see if there is Hazmats. Business has 1 Hazmat - used for their 2 forklifts on site. Propane - 5 gal cylinder approximately 20 cylinders onsite. Under CUPA, Propane is classified as a gas and they do go over the quantity limits of 200 cu ft. 1 propane cylinder would be 240 cu ft. Owner was not present during time of inspection. Talk to Eduardo (employee), who will forward the inspections and what we discuss to the owner. They might decide to get rid of all their propane tanks, States does allow an exception of 2 propane tanks on site. Owner will contact back to let me know his decision. At this time, business does not have a permit or

DOWNTOWN METALS & RECYCLING (Continued) **S106103208**

is in CUPA.

Violations:
Site ID: 72516
Site Name: SUPERFINE II (VALERO)
Violation Date: 04-30-2021
Citation: HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: OBSERVATION: The business failed to complete and electronically submit chemical inventory information for all reportable hazardous materials on site at or above reportable quantities. Review, update and resubmit the Hazardous Materials Inventory into CERS to include all hazardous material stored in a capacity greater than 55 gallons of liquid, 200 cubic feet of compressed gas or 500 pounds in weight of a solid. In

ARCO (Continued) **S101582659**

the hazardous materials information the Federal hazardous categories were not filled out. The average daily amount of each hazardous materials was not filled out as well. CORRECTIVE ACTION: Complete and electronically submit the chemical inventory information for all reportable hazardous materials on site at or above reportable quantities. Please correct the following; waste oil 6 55 gallon steel drums, waste oil filters 2 55 gallon steel drums, grease 2 55 gallon steel drums. 2 550 gal AST's new oil for total of 1100 gallons of 15W40 new oil, 2 smaller 175 [Truncated]

Violation Date: 04-20-2022
Citation: Un-Specified
Violation Description: UST Program - Administration/Documentation - General Local Ordinance - Must include violation description and proper ordinance citation in the "comment" section.
Violation Notes: Returned to compliance on 04/20/2022. OBSERVATION: Facility replaced VR 208 sensor for T3 fill sump on site and needs a D5 like for like permit. Facility also needs to replace UDC 15/16 VR 208 sensor. CORRECTED ON SITE: Inspector Young created a D5 like for like permit on-site during facility inspection under permit record ID SRUPQVSSS. OBSERVATION: Emergency shut off switch sign is hard to read and may delay in alerting drivers fueling their vehicles to the location of the ESO sign. CORRECTIVE ACTION: Facility needs to install a new ESO sign next to the ESO switch to alert drivers fueling their vehicles of the location of the ESO switch. Facility should install a sign on the north side of the building to alert the drivers fueling their vehicles with the diesel dispensers on the north side of the facility.

Violation Date: 04-20-2020
Citation: 23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Description: For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes: Returned to compliance on 08/19/2020. OBSERVATION: Facility did not comply with one or more of the following DO monthly inspection requirements: DO noted the incorrect CERS ID in Section I on all DO reports. DO noted incorrect anniversary dates for monitor cert, spill buckets, overfill, and secondary containment testing in Section X. DO inspections were not completed within 30 days between 1/2020 & 2/2020 (2 days past due), 12/2019 & 1/2020 (3 days past due), 8/2019 & 7/2019 (5 days past due), & 5/2019 & 6/2019 (3 days past due). DO did not note loss of alarm history in Section III on DO reports from 6/2019-3/2020. DO did not note in Section III set up data warning for L3 87 fill sensor on 12/2019 DO report. Owner/operator did not complete Section V when there were compliance issues noted by the DO in Section III for 1/23/2020, 12/20/2019, 11/25/2019, DO reports. Owner/operator failed to print, sign, and/or date on all DO reports from 3/2020-4/2019. Only the owner/operator shall be reviewed Section V and [Truncated]

Violation Description: Failure to continuously monitor the interstitial space of a double-walled tank with an audible and visual alarm system.
Violation Notes: Returned to compliance on 07/22/2020. OBSERVATION: Owner/Operator did not maintain dispenser piping, components, & filters located inside the UDC so that in the event of a leak, the leak would drain into the UDC. CORRECTIVE ACTION: Install an auxiliary device within the dispenser's filters to effectively divert unauthorized releases into the UDC. Auxiliary devices of this type (e.g., deflector plates) need to be installed to prevent exposing backfill material to an unauthorized release from the product piping within the dispenser.

Violation Description: Failure of the leak detection equipment to have an audible and visual alarm as required.
Violation Notes: Returned to compliance on 04/20/2022. OBSERVATION: The T3 west diesel VR 208 fill sump sensor went into alarm when pulled from the sump and then the alarm cleared and the sensor went into sensor out alarm. The sensor was stuck in sensor out alarm after that. T3 west diesel fill VR 208 fill sump sensor failed to provide an audible/visual alarm when tested during annual monitoring system certification testing. CORRECTED ON SITE: The sensor was replaced on site by Zarmik Aldoyan with Robertson Testing during the annual monitoring system certification testing. T3 fill sump sensor after the new sensor was installed cleared the sensor out alarm that was active at the beginning of the facility inspection. The new T3 fill sump VR 208 sensor sent the monitoring console into alarm when tested.

Violation Description: Failure of the leak detection equipment to be installed, calibrated, operated, and/or maintained properly.
Violation Notes: Returned to compliance on 07/28/2022. OBSERVATION: Owner/Operator did not properly install, calibrate, operate and/or maintain leak detection equipment. UDC 15/16 VR 208 sensor has a tear in the exterior wire sheathing, which is not up to Veeder Root standards. CORRECTIVE ACTION: Replace VR 208 in UDC 15/16 sump and maintain the VR 208 sensor per Veeder Root specs. OBSERVATION: Liquid was observed in the T3 & T4 annular space and was enough to send the monitoring consoles into alarm when the sensors were relocated to the lowest point. Per Veeder Root specs all sumps shall be maintained free of liquid. CORRECTED ON SITE: Liquid was removed by on site staff and sensor was relocated by the tester Zarmik Aldoyan with Robertson testing. The annular spaces were liquid free.

Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes: Returned to compliance on 04/20/2022. OBSERVATION: Owner/Operator failed to meet one or more of the requirements applicable to overfill prevention equipment. Facility was late on overfill prevention testing. Facility first tested their overfill prevention equipment on 12/14/2018 which was 2 months late from the 10/2018 deadline. The facility in order to not be late the next time the overfill prevention

ARCO (Continued) **S101582659**

testing was due would have had to tested before the end of October 2021. Facility tested their overfill prevention equipment on 11/26/2021, which was one month late. CORRECTED ON SITE: FORTHWITH ensure the facility tests their overfill prevention equipment once by 10/13/2018 and every 36 months thereafter per Title 23 2637.2 (1)(a). Facility tested their overfill prevention equipment on 11/26/2021. Ensure to test their overfill prevention equipment again before the end of 10/2024 in order for the facility to not be late on their overfill testing again.

Citation: 23 CCR 16 2641(a) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(a)
Violation Description: Failure of leak detection equipment to be located such that equipment is capable of detecting a leak at the earliest possible opportunity.
Violation Notes: Returned to compliance on 04/20/2022. OBSERVATION: The T3 & T4 diesel east and west grade annular VR 344 sensors were found not located at the bottom of the tank to detect a leak at the earliest opportunity. During 2022 annual facility inspection T3 & T4 VR 344 sensors was approx over 16" in short for T3 and 10" short for T4 when measured during monitoring system certification. Tester Zarmik Aldoyan with Robertson Testing measured the T3 sensor and the length was 149". The tester then measured to the lowest point in the annular sensor riser and that was 165 1/2" and for T4 the sensor was approx at 125" and the lowest point was at 135". Monitoring equipment shall be maintained to be able to detect a leak at the earliest possible opportunity. CORRECTED ON SITE: FORTHWITH relocate this sensor to the lowest point of the T3 & T4 grade USTs. Tester slid more of the sensors wire from the cap so that the sensor was able to reach the lowest point of the annular riser. T3 west diesel and T4 east diesel annular are at [Truncated]

Violation Description: For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly

ARCO (Continued) **S101582659**

alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.

Violation Notes: Returned to compliance on 04/20/2022. OBSERVATION: Facility did not comply with one or more of the following DO inspection requirements: 1. DO did not include all sensors in alarm print outs attached to the DO reports. DO missed C4 annular sensor on multiple DO reports 2. Tank owner/operator did not print and sign in Section 6 on 6/21 DO report 3 . DO noted wrong check box in Section 7 on 12/21-5/21 DO reports. DO noted YES but there were no compliance issues noted in Section 3 of previous DO report 4. DO noted N/A in the last check 2 boxes in Section 8 for 4/22, 1/22, 12/21, 11/21, 10/21 DO reports for alarm response that occurred since last DO inspection 5. Eval Notes: 500 S Alameda St NOV follow up for facility at 500 S Alameda St. Inspector Young reviewed the facility's latest CERS UST submittal. Facility updated their tank capacity for T4 and updated the monitoring plan for T2. Facility also fully completed the owner/operator agreement. CERS NOVs were cleared to the date of submission on 5/17/2022. Facility also sent an email with the missing work orders and printed out a copy of the current monitoring plan to place on-site. Those NOV's were cleared to the date in which the email was sent on 5/17/2022. Facility also recently replaced the UDC 15/16 VR 208 sensor. Facility will need to send a test results sheet for that testing. This was applied to D5 like for like permit that was issued during the annual facility inspection. Previous duplicate NOV's were also cleared as they should have been previously. .

Eval Notes: 500 S Alameda St NOV follow up for facility at 500 S Alameda St. Inspector Young was on site for D5 permit under record ID SR0033823. Facility pulled a permit needed for cold start which facility completed in early 2020. Facility also corrected the DO reports, put deflectors in their dispensers, and relocated sensors to the lowest point. Inspector Young also reviewed the facility's latest CERS UST submittal. Facility updated their monitoring site plan and owner/operator agreement. Facility still needs some updating on their tank information and monitoring plan. Facility still needs to provide a copy of a work order for a set up data warning back on April 6th. Inspector Young spoke with manager Nick Bagdasarian.
