I am writing in support of the appeal against BF 250854.

I have attached 3 exhibits:

Exhibit 1: Shows the rear of my property at 3830/3832 Roble Vista Dr., directly below the proposed development site. Without any safety measures, construction equipment may roll down the hill & crush the building. Proposed site is in a severe fire hazard zone & earthquake fault zone. CEQA exemption failed to mitigate:

- Fire safety during hauling operations
- Earthquake safety during hauling operations
- Safety of property, life and limb during hauling and construction operations; construction equipment will prevent emergency vehicles from entering the street.

Exhibit 2: Shows the proposed project that will require removal of the entire hillside (23,000 cubic yards of soil); project consists of 29 units, while all existing structures on that side of the street are only single family homes & duplexes.

Exhibit 3: Shows that street is occupied by tenants' parking; there is no room for the workers and flagmen to park during the hauling operations.
