

## MOTION

## TRANSPORTATION

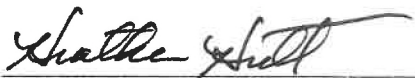

Parking meters are used to track and regulate vehicle parking time, which helps improve customer turnover in commercial areas. Limited parking time allows visitors sufficient time to shop and conduct business, while also providing a time-based incentive to move their vehicles when they are done.

West Adams Boulevard between Buckingham Road and Hillcrest Drive is a busy commercial corridor with a mix of small businesses, houses of worship, and adjacent residential buildings. Currently, there is little on-street parking to accommodate the needs of the community. The installation of parking meters along this portion of West Adams Boulevard would more effectively manage scarce on-street parking by encouraging vehicle turnover and reducing traffic for drivers seeking a parking space.

In order to install new parking meters, it is necessary for the Department of Transportation to analyze parking conditions in the area, identify any installation and maintenance costs, and consider numerous factors to determine the feasibility of installing parking meters at this location.

I THEREFORE MOVE that the City Council direct the Department of Transportation to report within 30 days on the feasibility, cost, and steps necessary to install parking meters on both sides of West Adams Boulevard between Buckingham Road and Hillcrest Drive.
