

MOTION

TRANSPORTATION

The intersection of West Adams Boulevard and West Boulevard includes two wide lanes of traffic, a turn lane, on-street parking, and bike lanes. It is extremely difficult for pedestrians, especially children, older adults, and people with disabilities, to cross the street at this location and the existing signalized crosswalks are several blocks away. In order to address this issue, it is critical that the Department of Transportation explore the feasibility of installing infrastructure improvements such as a cross walk or other safety improvements to improve the safety of all road users.

I THEREFORE MOVE that the City Council direct the Department of Transportation to report within 30 days on the feasibility, cost, and steps necessary to install roadway improvements such as a crosswalk or other safety improvements to increase pedestrian safety at West Adams Boulevard and West Boulevard.
